

AART

Painting a Picture of Your IIS

Nathan Bunker, Senior Technical Project Manager
April 6, 2016

Overview of this Session

- Introduction
 - Interoperability Discover Testing: Where are we today?
- Discovery Process
 - Ten Testing Steps
- AART Report Demonstration
 - How to read the AART report

INTRODUCTION

CULTIVATING COMMUNITY
ESTABLISHING STANDARDS
SUPPORTING IMPLEMENTATION

National Meeting
SEATTLE, WA
APRIL 5-7

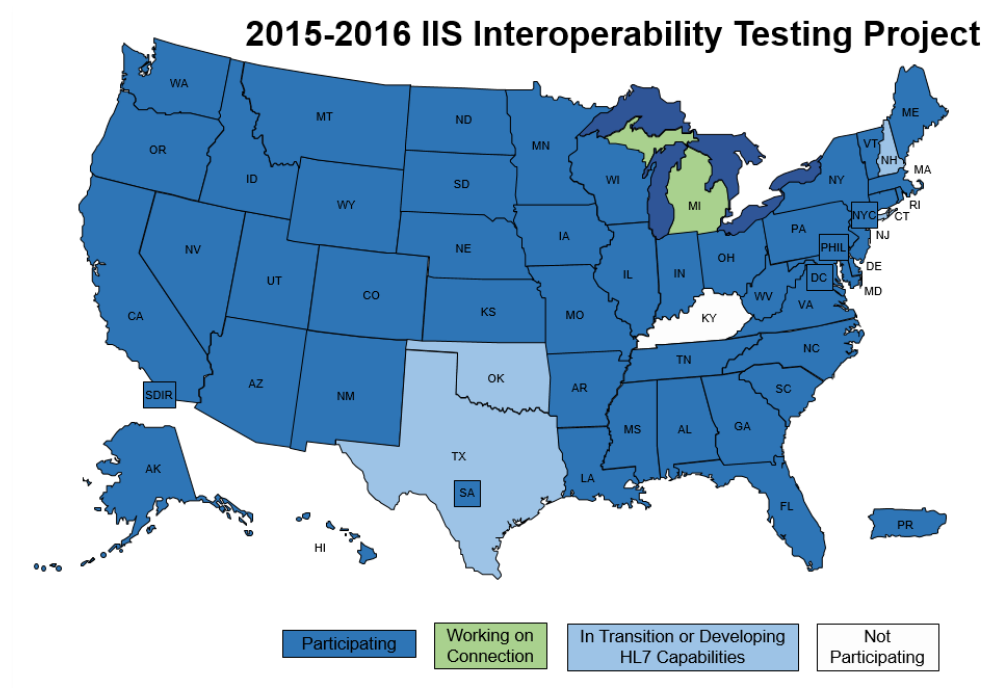

2016

Interoperability Discovery Testing: Where Are We Today?

Participation

- 52 IIS Programs and 2 Vendors
- Of these
 - 42 Connected
 - 1 Connection in Progress
 - 11 Manual Reporters
 - 6 are submitting manual tests
- 4 IIS Have Yet To Participate
 - Some of these are migrating to new systems

Last Updated: March 30, 2016

DISCOVERY PROCESS

CULTIVATING COMMUNITY
ESTABLISHING STANDARDS
SUPPORTING IMPLEMENTATION

National Meeting
SEATTLE, WA
APRIL 5-7

2016

Discovery Process

- Update message (VXU) submitted, acknowledgement message (ACK) returned
- Query message (QBP) submitted, response message (RSP) returned
- Each submission and response is defined in a **test case**
- A test case is defined within a **test section**

Test Sections

Update Focus	
Basic	NIST 2014
Intermediate	Coded Values
Advanced	Data Quality
Not Accepted	Negative ACKs
ONC 2015	NIST 2015
Profiling	Local IIS Guide Requirements
Exceptional	EHR Examples and Toleration Checks

Query Focus	
QBP Support	NIST 2015
Deduplication Engaged	Patient/Vacc Matching
Forecaster Engaged	Forecast Returned

Message Totals

1,010 VXU
1,007 QBP

CULTIVATING COMMUNITY
ESTABLISHING STANDARDS
SUPPORTING IMPLEMENTATION

National Meeting
SEATTLE, WA
APRIL 5-7

2016

Step 1: Create Test Message

- Test messages built when tests run
- Format and type of content is consistent
- Identifying data is always new and unique
 - Last names are taken from US counties
 - First/middle names are common baby names
 - Address city, zip & state are real, street fictitious
 - Birth dates always changing
 - Other data is internally consistent

Step 1: Create Test Message

```
MSH|^~\&|||20160403085833-0400||VXU^V04^VXU_V04|U01W1.11x|P|2.5.1|
PID|||U01W1^^^AIRA-TEST^MR||Scott^Hirsh^R^^^^L|Davis^Sylvia|20120401|M|
|2106-3^White^HL70005|117 Bracey Cir^^Point Aux Pin^MI^49775^USA^P|
|^PRN^PH^^^231^6435705|||
|2135-2^Hispanic or Latino^HL70005|
PD1|||
|02^Reminder/Recall - any method^HL70215|||A|20160403|20160403|
NK1|1|Davis^Sylvia^^^^L|MTH^Mother^HL70063
|117 Bracey Cir^^Point Aux Pin^MI^49775^USA^P|^PRN^PH^^^231^6435705|
ORC|RE||U01W1.3^AIRA|||I-23432^Burden^Donna^A^^^^NIST-AA-1|
|57422^RADON^NICHOLAS^^^^NIST-AA-1^L|
RXA|0|1|20160403||21^Varicella^CVX|0.5|mL^milliliters^UCUM|
|00^Administered^NIP001|||N3783EO||MSD^Merck and Co^MVX|||A|
RXR|SC^^HL70162|RA^^HL70163|
...
```

Step 2: Set Expectations

- Expected outcome must be defined
- For update tests (VXU)
 - **Accepted:** IIS positively accepts message
 - **Rejected:** IIS indicates fix and resubmit
- For query tests (QBP)
 - **Exact Match:** Patient found
 - **Multiple Match:** More than one patient found
 - **No Match:** Patient was not found

Step 3: Submit Vaccination Update

- VXU is submitted using available transport
 - CDC defined SOAP/WS
 - Other SOAP/WS standard
 - HTTPS POST
 - Manual (in development)
- Acknowledgement message (ACK) returned

Step 4: Read Acknowledgement

- ACK message is categorized as either:
 - **Accepted:** Positive response, primary/essential data has been accepted, IIS is not asking for correction and resubmission
 - **Rejected:** A major issue has been identified, some/all critical data has not been accepted, IIS is asking for correction and resubmission
- Warnings or Soft Errors
 - Not yet being measured or tested

Step 5: Validate ACK Message

- Message conformance checking
 - Expected to conform against CDC Implementation Guide release 1.5
- Validation software details:
 - Provided by National Institute of Standards and Technology (NIST)
 - Can be accessed directly here:
 - <http://hl7v2-iz-r1.5-testing.nist.gov/iztool/>

Step 6: Submit Vaccination Query

- Queries are constructed from update
 - Query parameters copied directly from update
 - Intended to produce a strong single match
- All updates are queried for
 - Including updates that were rejected by IIS
- Delay between update and query
 - All updates are submitted and acks returned
 - Then all queries are sent, 30-60 minutes later

Step 7: Read Query Response

- **Response status** is categorized as:
 - Match: One patient returned
 - Multiple Match: More than one patient
 - No Match: No patient returned

Step 8: Determine Store Status

- Verify essential data is returned:
 - Patient name and date-of-birth
 - All vaccination dates and CVX codes
- **Store status** determined:
 - Accepted and Returned
 - Accepted but Not Returned
 - Not-Accepted but Returned
 - Not-Accepted and Not Returned

Step 9: Validate RSP Message

- Message conformance checking
 - Expected to conform against CDC Implementation Guide r1.5
- Validation software details:
 - Provided by National Institute of Standards and Technology (NIST)
 - Can be accessed directly here:
 - <http://hl7v2-iz-r1.5-testing.nist.gov/iztool/>

Step 10: Read Forecast

- Look in OBX segments and try to read forecast
- Expecting forecast for every patient
- Forecast Status:
 - Included: At least one vaccination forecasted
 - Not Included: Unable to find a vaccination forecasted

AART REPORT

CULTIVATING COMMUNITY
ESTABLISHING STANDARDS
SUPPORTING IMPLEMENTATION

National Meeting
SEATTLE, WA
APRIL 5-7

2016

AART Report

- Software and report are Beta versions
 - Under active improvement and revision
 - Looking for feedback from IIS
- Report represents discovery process
 - Based on standards and best practices
 - Contains exploratory test cases
- Reports are run monthly

Beta Test No

Access to this report has been given to you as part of a beta report to guide improvements you might make to your IIS but limitations and conditions:

- This report shows the results of a testing discovery process. You will see this report change as improvements are made.
- The scoring and graphics shown in the report are to focus on the most critical for interoperability. While this report follows standards wherever possible, it does not represent a complete test of the IIS against these standards.
- We need your help to make this report better. Notice any issues? Improve this report? Please tell us!

Chapter 5: Segments and Message Details

Table 5-11 Patient Identifier Segment (PID)

SEQ	Element Name	Data Type	Usage	Cardinality	LEN	Conditional Predicate	Value
1	Set ID - PID	SI	R	[1..1]			
2	Patient ID	CX	X				
3	Patient Identifier List	CX	R	[1..*]			
4	Alternate Patient ID - 00106	CX	X				
5	Patient Name	XPN	R	[1..*]			
6	Mother's Maiden Name	XPN_M	RE	[0..1]			

Initial Impact for IIS Pilot Sites

- ACK messages significantly improved
- Workflow issues identified
- Performance problems identified
- Issues with specific coded values identified and fixed
- Test cases and associated messages used to build and improve local test processes
