

ALERT IIS

TARGETED DEDUPLICATION:

A SAGA IN DATA USAGE

Deborah Richards, ALERT IIS Analyst

Jenne McKibben, ALERT IIS Program Coordinator

Mary Beth Kurilo, ALERT IIS Director

OBJECTIVES:

- Provide framework of ALERT IIS automated and manual client merging algorithms
- Summarize results of targeted deduplication and IIS metadata trending
- Share outreach efforts to improve data feeds to maximize automated deduplication

ALERT IIS OVERVIEW:

- **Oregon ALERT Immunization Information System (IIS)** is a population-based, lifespan immunization registry
- Automatic client merging functionality occurs at import
 - Based on scoring using several key fields and name matching algorithms
- Out of scope: Immunizations are automatically deduped upon import, but this will not be addressed in the scope of this presentation

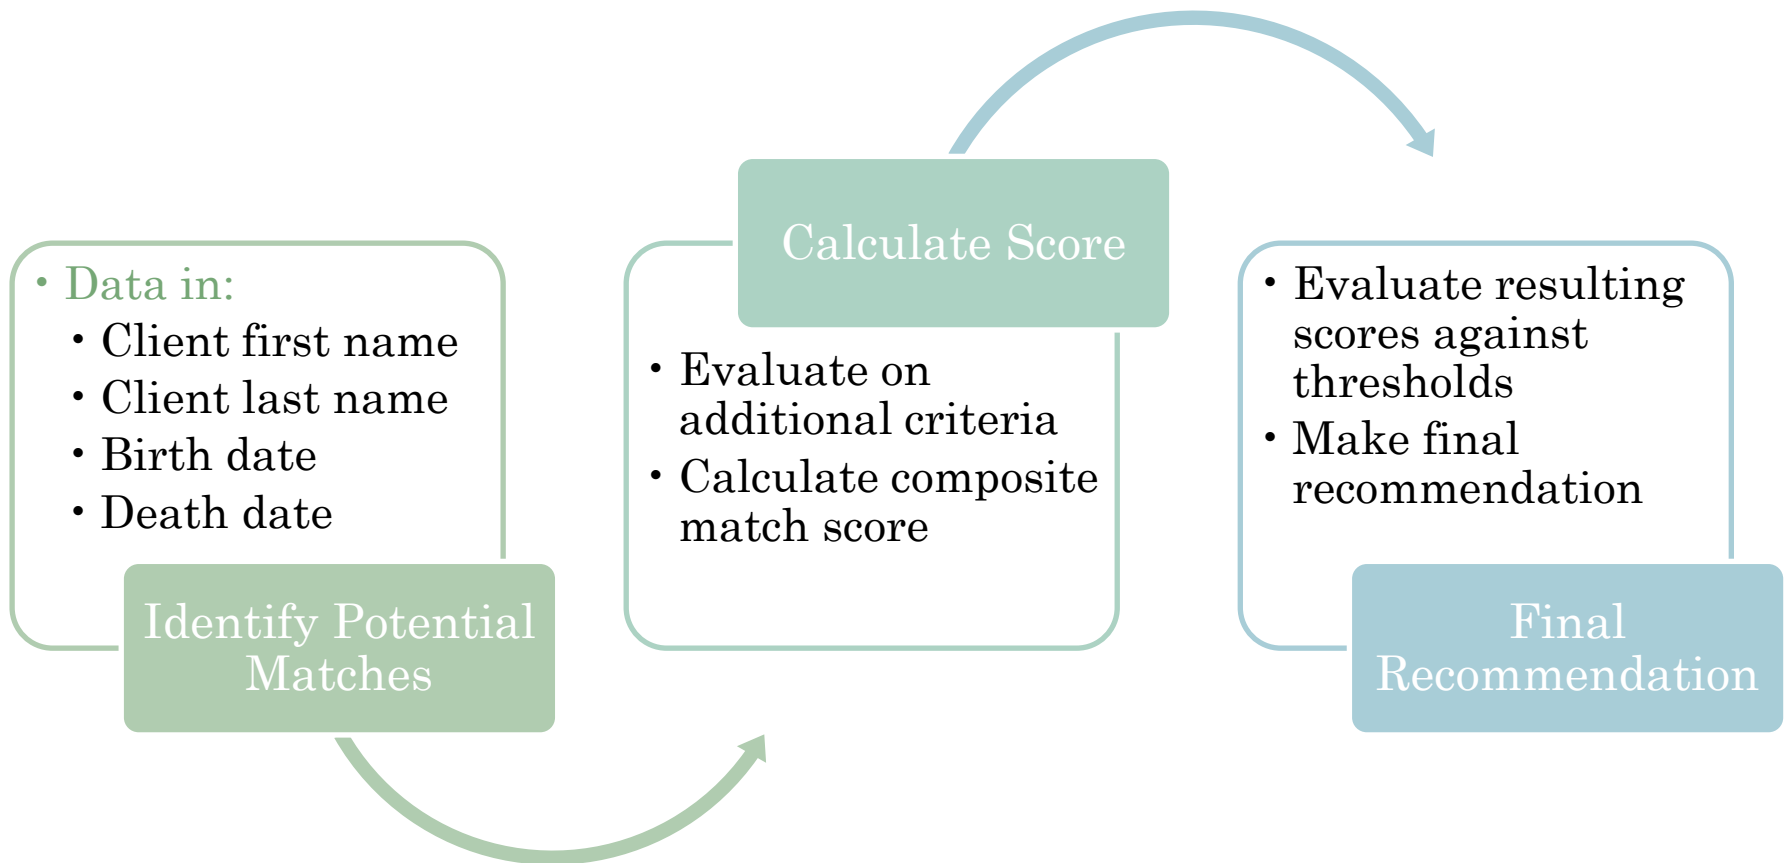

CLIENT DEDUPLICATION OVERVIEW:

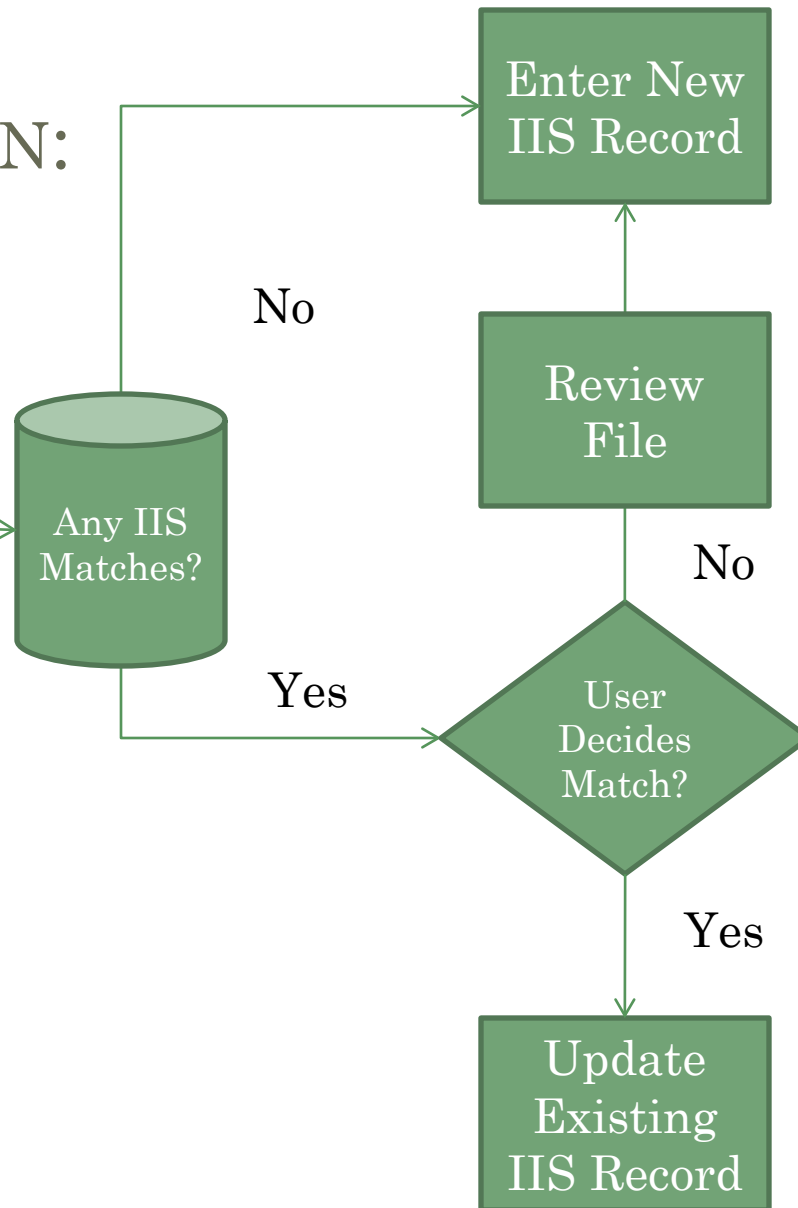

- ALERT IIS adopted the WIR runMatch module for automated client deduplication
 - Evaluates incoming demographic data against existing records
 - Manual merging targets records automatically selected for human review
- Goal: Minimize duplicate clients in the database by proactively identifying probable matching records

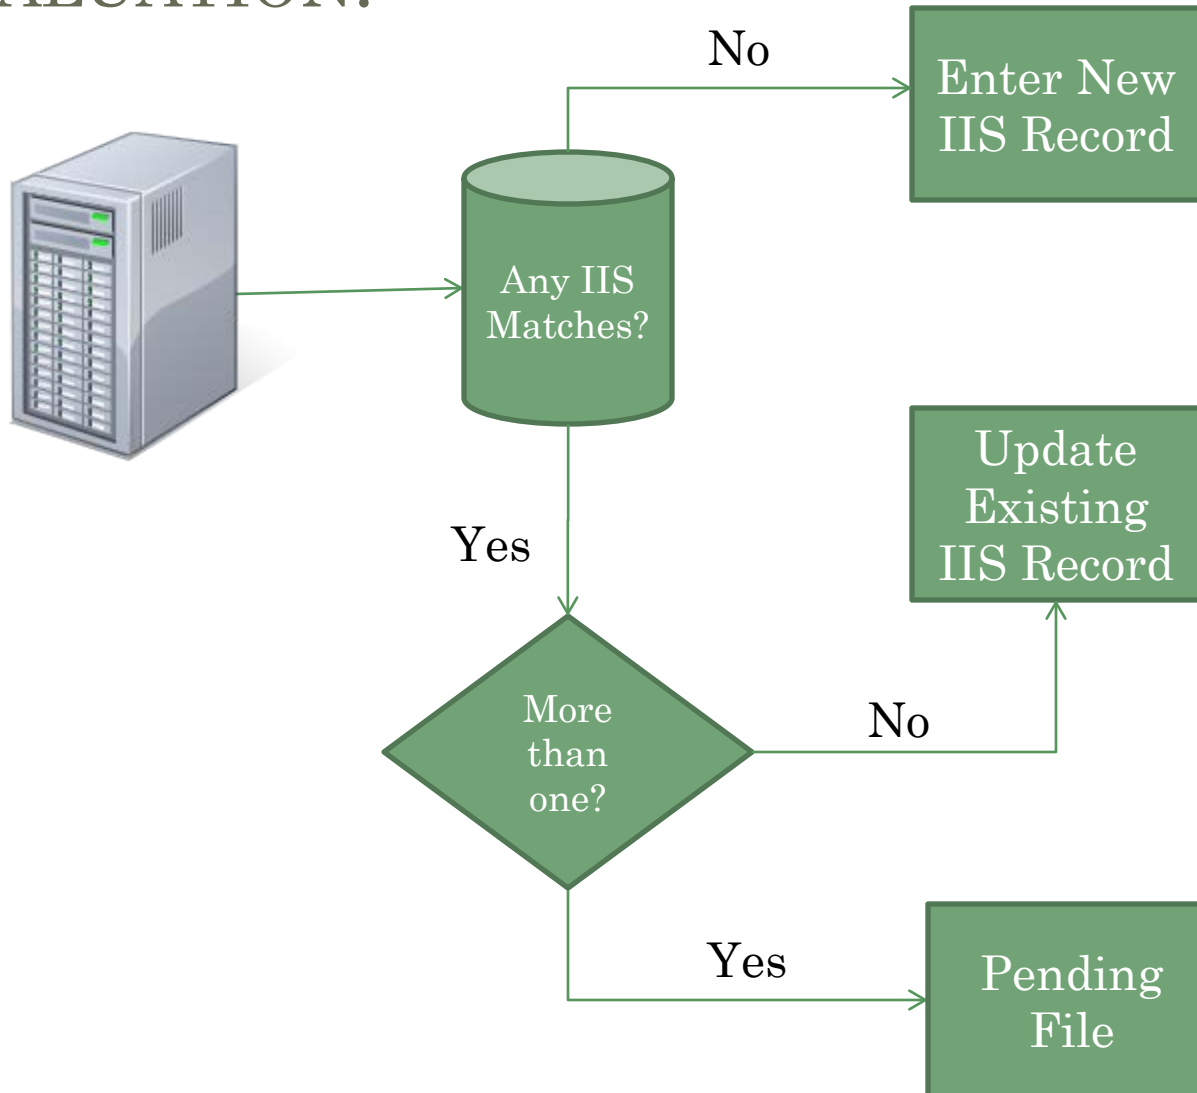

RUNMATCH OVERVIEW:

EVALUATION:

EVALUATION:

EVALUATION:

Fields Used in Matching

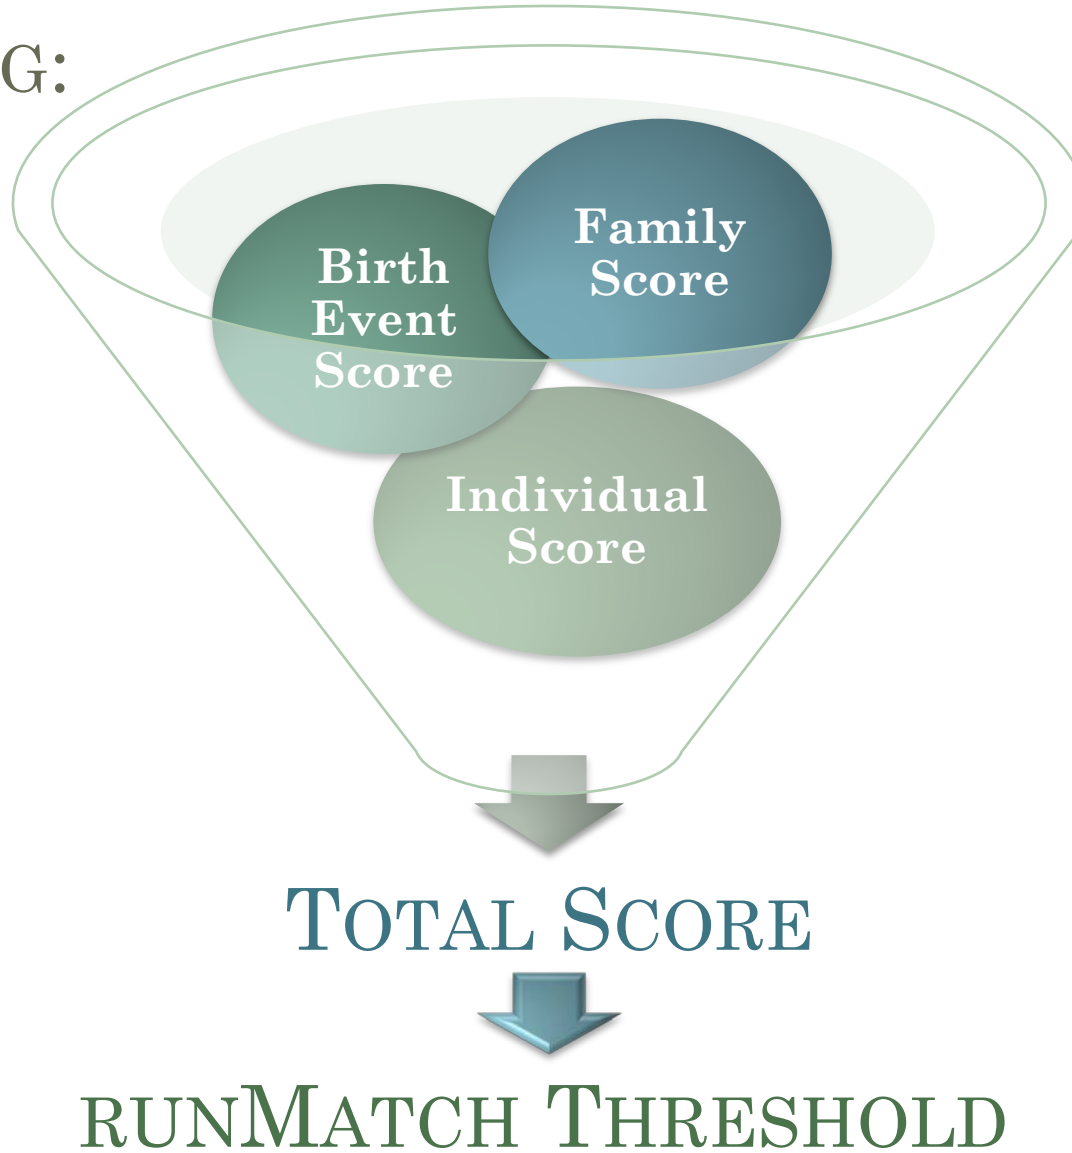

- Client Name (first, middle, last, suffix)
- Date of Birth
- Date of Death
- Primary Address (#,street/city/zip)
- Mother's Name (first, maiden last)
- Birth Order
- Gender

Business Rules

- Don't need all fields to match
- Don't need identical matches (*exact matches rank higher*)
- Scoring probabilistically on individual fields
- runMatch assigns a *positive*, *zero* or *negative* score to each element evaluated

SCORING:

MANUAL MERGE PROCESS:

Select patients to merge...

Possible Duplicate Patients...

Job ID	Exchange Date	Patient ID	Last Name	First Name	Middle	Birth Date	
--------	---------------	------------	-----------	------------	--------	------------	--

No Patients matching your criteria were found...

State staff can also select patients to review using Client ID values.

TIME TO CATCH-UP:

- Pendlings small percentage (0.24%) of total client records
- Significant body of work: Over 20k pending records with initial data loading (at least 60k in pending file)

**Data Conversion & Migration (DCM) Q4 2010:
Total Patients Processed**

ALERT IIS TARGETED DEDUPLICATION:

Post-Release 2.0: Total Merges Performed

□ Data in: Catch-up/Keep-up

😊 Caught-up

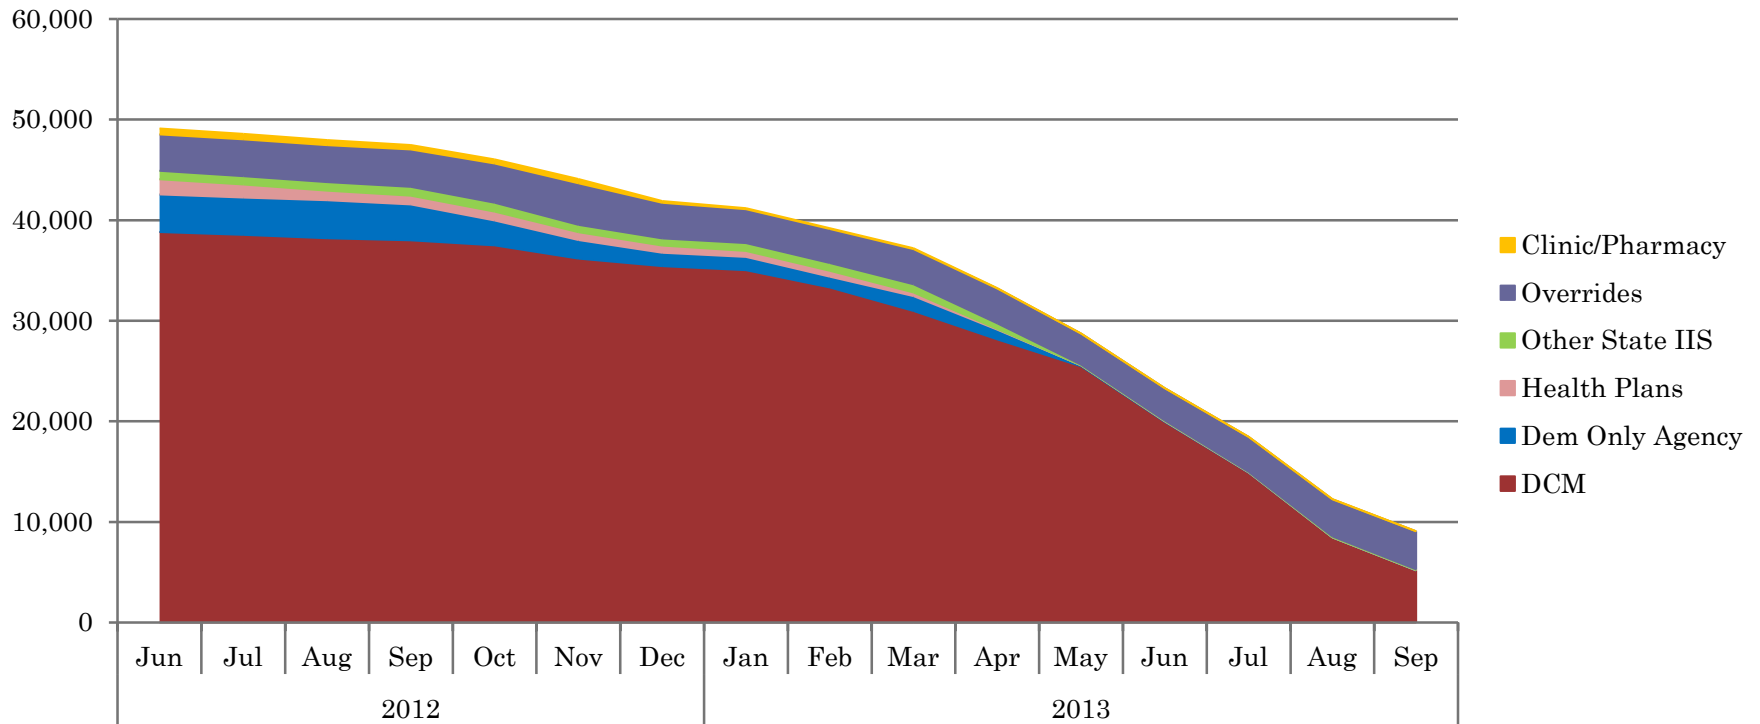

□ DCM Targeted/Keep-up

TARGETS:

Pending Records Over Time

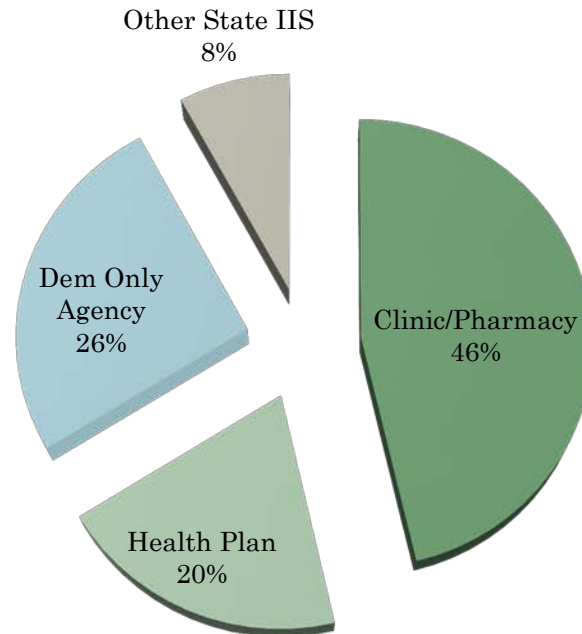

➤ DCM largest area of need

TARGETS:

Pending Transactions by Organization Type

- Demographic only & Health Plans
- New clinic data coming into IIS

ALERT IIS TARGETED DEDUPLICATION:

- From June 2012 – September 16, 2013:
- OHA performed **153,395** merges; **366,100** patients were merged and **114,622** new records were created as a result of merging efforts

	Avg/Week	Min	Max
Merges Performed	2,223	616	3,704
Patients Merged	5,306	1,501	8,604
New Patients	1,661	318	2,969

OTHER CONSIDERATIONS:

- Prevent pendings at import
- Duplicate records: Score too low for pending file
 - Improve data feeds
- Pilot with small site:
 - Demographic only agency
 - Daily feed of entire population
 - Receive Client Name, DOB, SSN, Sex, Race & Ethnicity
 - No address or mother's information

PILOT SITE:

- Typical day of imports: 128 pending records; 70 duplicate records
- May not seem like much: 3,589 pending records to date – more than one week of full-time merging!
- Estimated 1,400 duplicate records per month!

PILOT:

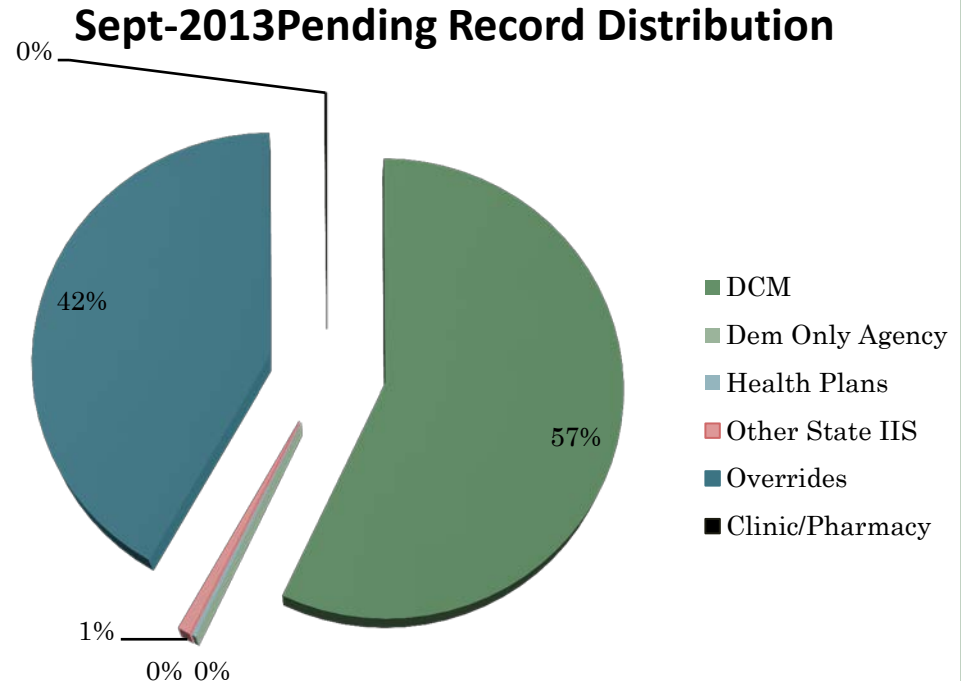

- Added Medicaid ID, Mother's First & Maiden Name and DOB & DOD precision indicators
- Rolled to production 07/29/13

ALERT IIS NEXT UP:

Continue to keep up
with new pending
groups

Less than 10k
records in pending:
57% DCM & 42%
Overrides

- DCM records are largely record pairs that need to be unpending
- Overrides are pending groups created when UI entry finds potential match(es) and user determines clients are different
- Need system update to modify unpend functionality

FUTURE WORK:

- Continue working with sites on Real Time Data Exchange
 - Data comes in at POS
 - ALERT onboarding staff leverage HL7 standards for better data feeds
- Continue targeting areas of need
- Discussed leveraging one or more additional fields to improve automated matching:
 - Medicaid ID, SSN, Phone Number, Patient ID
 - Modifying runMatch may not be possible
- Standards for import business rules (e.g., demographic only sends, etc.)
