INFORMATION REQUEST

Topic: Risk Assessment Survey

Request Date: November 12, 2019

Information Requested:

Connecticut has been asked by Trinity Health to fill out a lengthy risk assessment survey before they will send HL7 messages to them. Trinity's survey is very long and comprehensive and it will take the IIS program and the IIS Vendor many hours to complete.

1. Have any other IIS programs been asked to fill out a Risk Assessment Survey from Trinity Health or another health system before sharing HL7 data with them?
2. If yes, could they share their response or completed survey with Connecticut?

Requesting Member: Nancy Sharova (CT)

Responding Member(s): Sherri Dunton (ME), Amanda Miner (OK), Dannelle Hauser-Saslo (WA)

Results:

ME:

Maine has not been asked to fill out this survey.

OK:

We've only had to do this once for a health group. The document was received by our Meaningful Use team and forwarded to the OSIIS team for answering. We reached out to our IT personnel and together we were able to answer their questions. We didn't track the time that it took, but there was some research and discussions involved to be able to answer the document's questions. However, we looked at it as an opportunity to have the information on hand so that in the future if we were asked to fill out something similar, we wouldn't have to go through the process again.

WA:

Washington has not received a request from a vendor/provider to complete a risk assessment survey.
