AMERICAN IMMUNIZATION
REGISTRY ASSOCIATION

Select AIRA 2020 National Meeting Presentations: M&I

Tuesday, September 22, 2020

3-4 PM ET

AIRA
AMERICAN IMMUNIZATION
REGISTRY ASSOCIATION

Moving the Needle: IIS Community Success, Data at Rest Pilots, and Measurement and Improvement (M&I) 2020 Validation Recognition

AIRA Webinar Series

- Each Tuesday
- Now through September 22, 2020
- 3-4 PM ET
- Join Us!

Webinar Series at a Glance

Week 1 CDC Panel Discussion: Advancing IIS Together

Week 2 The Immunization Gateway Portfolio

Week 3 Data Quality

Week 4 Data Use

Week 5 Working with End Users

Week 6 IIS Operations

Week 7 Global Perspectives

Week 8 Measurement and Improvement

Before We Get Started

All phone lines
are muted

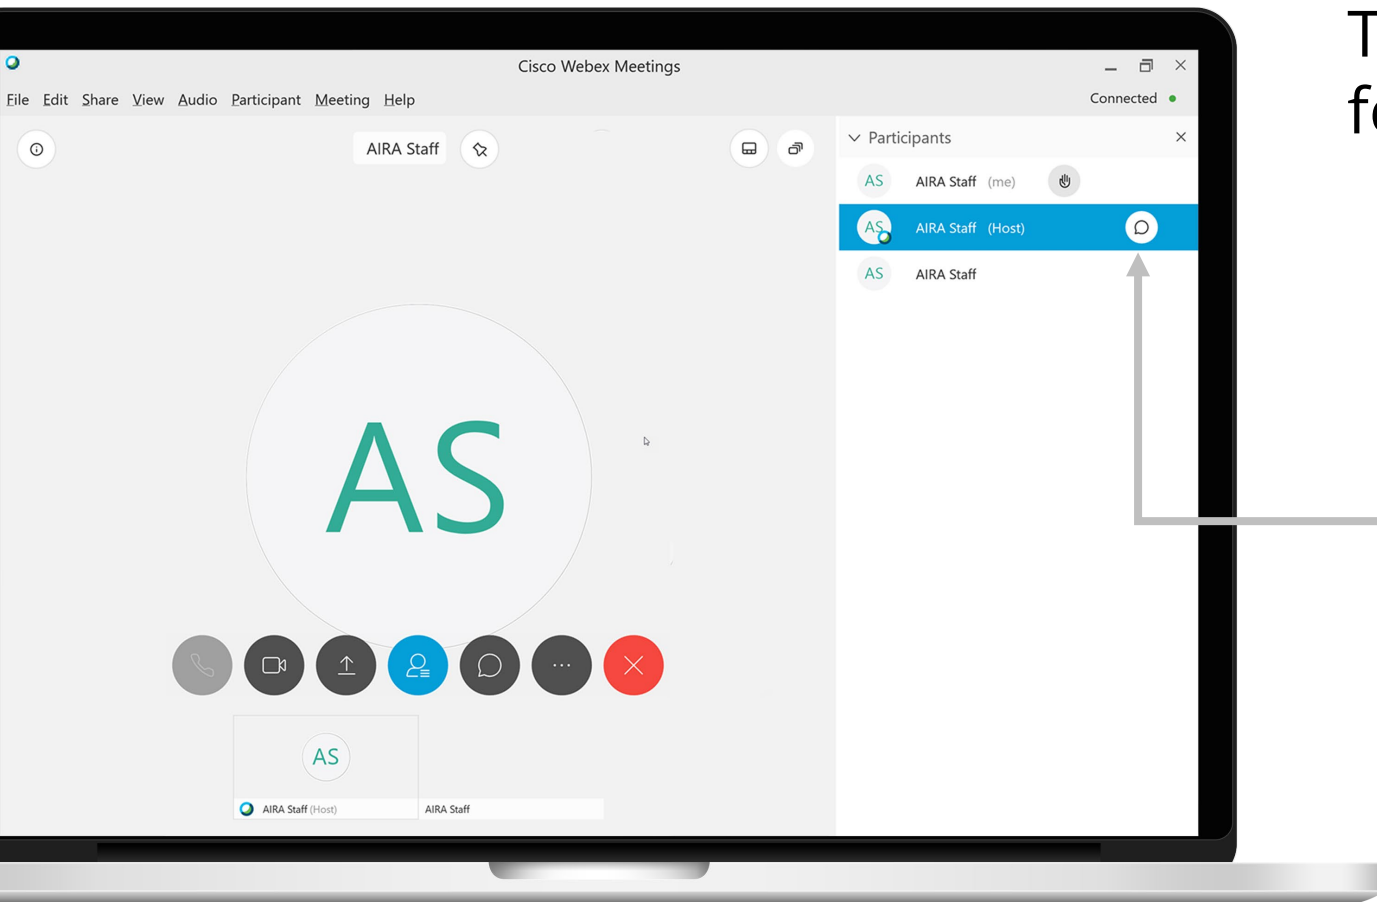

This meeting is being recorded
and will be posted on the
AIRA repository

Question & Answer

How do I ask a question?

There will be time allotted for Q&A following the presentation.

Send an e-mail to:
info@immregistries.org

Select the chat icon next to the host and type question into the chat box.

Today's Speakers

- **Kevin Snow**, MACAW Co-Chair
- **Eric Larson**, AIRA
- **Heather Crawford, MPH**, Oregon Health Authority

Measurement & Improvement (M&I): Impact and Outcomes

September 2020

Overview

- What is **Measurement and Improvement**, and who is engaged in it?
- Within a patient's immunization visit, what is the role of the IIS?
- How can M&I improve that experience?

Measurement and Improvement Initiative – What Is it?

- M&I is a **community-led** effort to:
 - Objectively test IIS alignment with standards
 - Provide IIS with information and assistance to improve
- All testing is conducted by AIRA staff, through:
 - Connecting with test or pre-production systems, or analyzing deidentified data

Who is Supporting the M&I Process Along with AIRA?

Roger Aikin (AZ), Aaron Bieringer (MN), Shannon Coleman (STCHealth), Jillian Doss-Walker (IHS), LaTreace Harris (CDC), Josh Hull (MI), Dave McCormick (IN), Amy Metroka (NYC), Wendy Nye (MI), John Robinson (Phil), Eric Schuh (DXC), Rob Snelick (NIST), Kevin Snow (Envision)

- Members of MACAW

- Community-wide participation is strong and increasing!
- Partners are publicly recognizing improvements in standardization across IIS

The Impact of M&I at the Point of Care: The Start of our Story

It's time for a patient's annual exam.

He arrives at the doctor's office and is shown to the exam room.

While he is waiting, his physician prepares for the visit.

His physician accesses the EHR and searches for the patient's record.

Query and Response

- The patient's provider wants to ensure she has the full record, and to see if her patient needs any vaccinations today during his visit.
- Because there is an EHR-IIS interface, the patient's doctor will query the IIS to obtain the patient's immunization history.

Query and Response

- When queried, an IIS should respond with a complete immunization record response profile (RSP Z32) for the patient.
- In 2017, **21 IIS** were able to provide the complete immunization record.
- In 2020, **45 IIS** were able to provide the complete immunization record.

IIS processes a query requesting a patient's immunization record

DISCLAIMER

- Are all these improvements a direct result of M&I?
 - **Probably not**
- Is it likely that M&I has helped to focus IIS Programs and Vendors, as well as Immunization Program staff, on much needed and high priority improvements, and has accelerated improvements?
 - **We think so!**

Gathering information from the IIS Community

- In Spring 2020, AIRA sent out a survey to the IIS community to gather data and success stories.
- Survey questions included information about current interoperability volumes.
- Out of the 58 IIS encouraged to participate in M&I, 29 IIS responded.

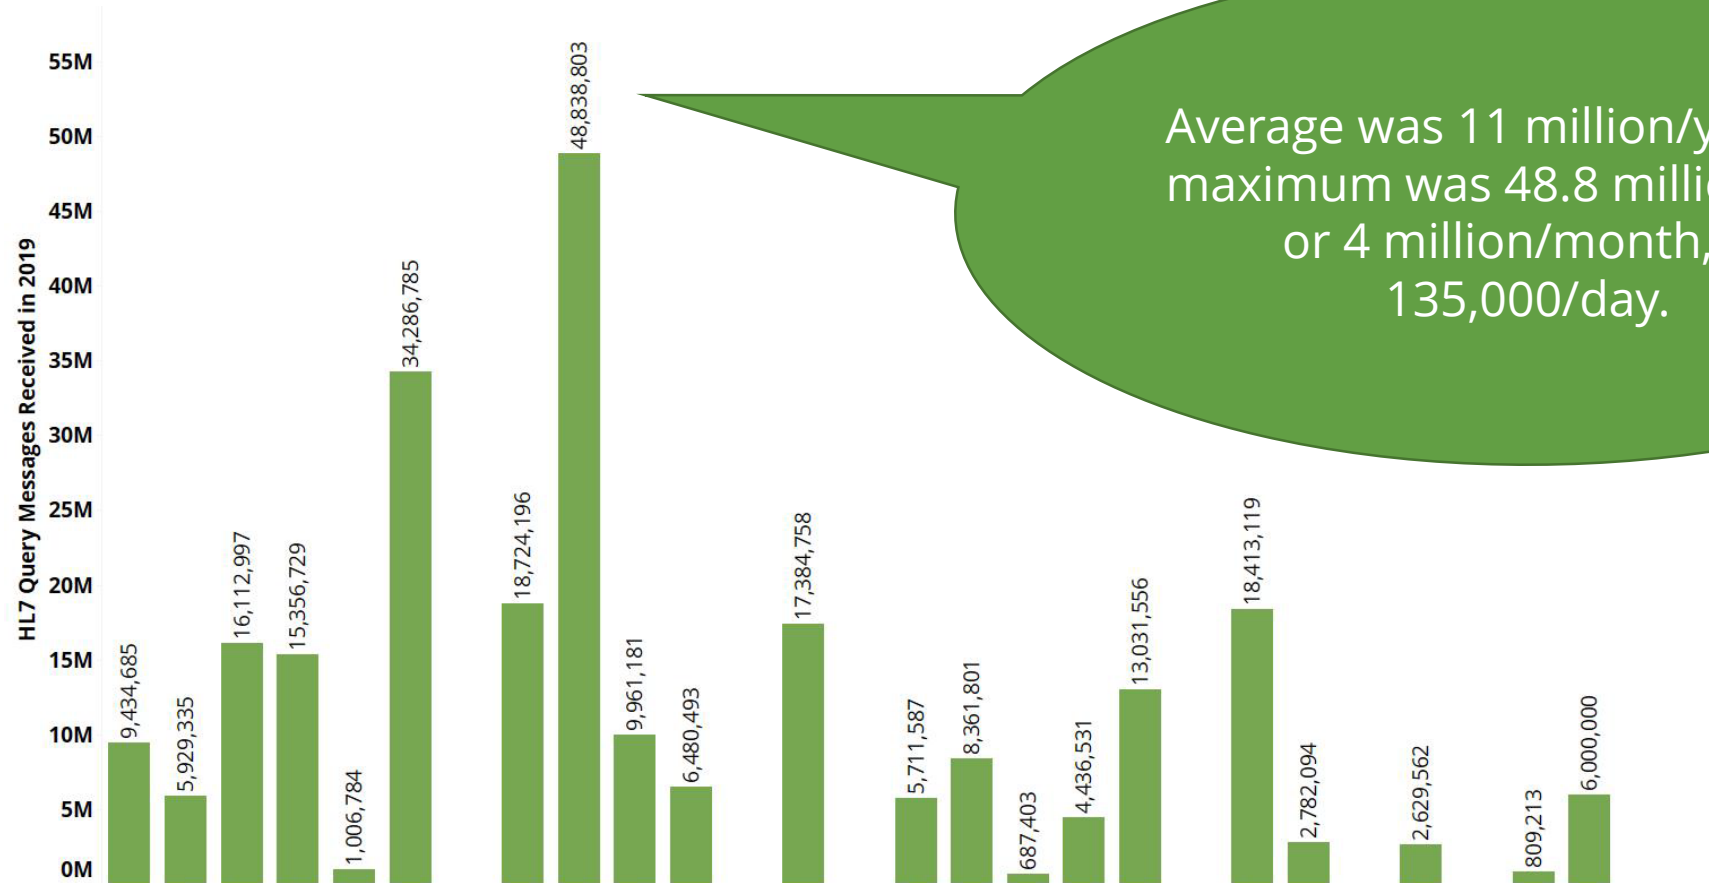

Query and Response

Of the 29 respondents, 21 IIS
reported numbers on query
messages received in 2019

Query and Response – Query Messages Received 2019

Transport

- Standardized transport protocols allow the office's EHR and IIS to both exchange data electronically and to use the exchanged data.
- The use of the agreed upon transport layer promotes interoperability.
- Our patient's physician is able to query the IIS using an HL7 message sent via SOAP.

Transport

- The **Submit Single Message** measure is designed to carry an HL7 message with authentication parameters that make data exchange possible.
- Between 2017 and 2020, there was an increase of 16 IIS that were able to respond with a conformant response.

IIS supports the Submit Single Message Operation as defined in the SOAP Standard Interface 1.2 specification, Web Services Definition Language (WSDL), as endorsed by CDC

Clinical Decision Support (CDS)

- Clinical Decision Support tools are designed to automatically determine the recommended immunizations needed when a patient presents for a vaccination.
- The recommendations are developed by the Advisory Committee on Immunization Practices (ACIP) and are updated regularly throughout the year by ACIP.

Clinical Decision Support (CDS)

- When an IIS returns CDS, it allows medical providers to make informed decisions based on current and accurate immunization data.
- In 2017, **16 IIS** returned CDS in their HL7.
- In 2020, **41 IIS** returned CDS in their HL7.

Clinical Decision Support tools are designed to automatically determine the recommended immunizations needed when a patient presents for a vaccination

Submission and Acknowledgement

- After querying the IIS, our patient discovers that he should receive a flu vaccine and a shingles vaccine today during his visit.
- After discussing everything with his doctor, our patient decides to proceed based on recommendations.

Submission and Acknowledgment

- His provider administers the vaccines.
- The immunizations are administered and recorded in the EHR and automatically sent to the IIS.
- Because the HL7 message contained the conformant demographic and vaccination data, the message was accepted, and the IIS sent back an ACK to the EHR and the provider's office.

Submission and Acknowledgement

- An IIS should be able to process and accept administered vaccination events in full alignment with standards.
- In 2017, **19 IIS** were able to process an administered vaccine for a patient.
- In 2020, **43 IIS** were able to process an administered vaccine for a patient.

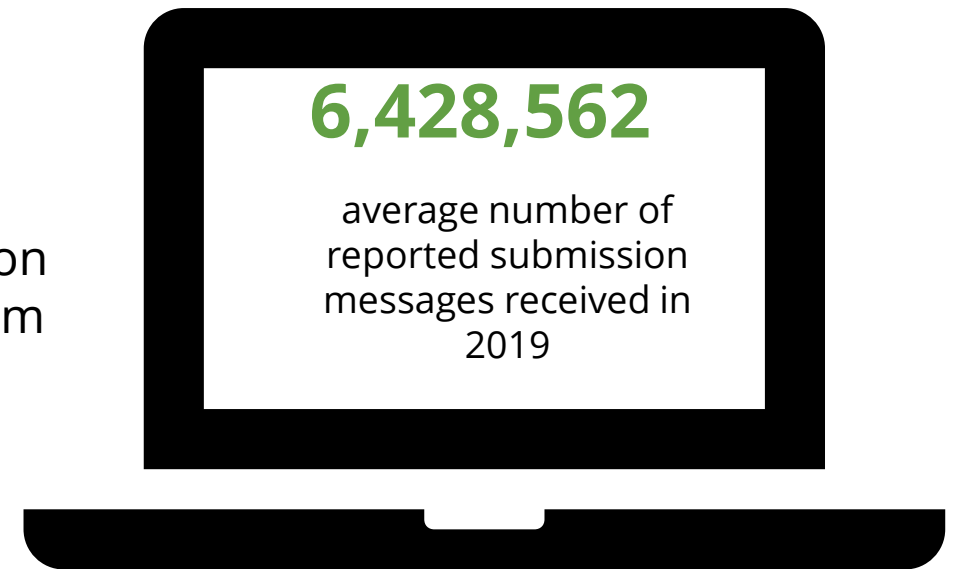

IIS processes an administered vaccine for a patient

Submission and Acknowledgement

24 IIS reported numbers on
submission messages from
2019

Submission and Acknowledgement

Average was 6.4 million/year, but maximum was 24.2 million/year, or 2 million/month, or 66,000/day.

Take Home Messages

GREAT PARTICIPATION

MEASURABLE PROGRESS

CLEAR DIRECTION FOR

A Look into Data at Rest (DAR)

Eric Larson, AIRA

Heather Crawford, Oregon Health Authority

Project Overview

AIRA's first Measurement and Improvement data quality content area is Data at Rest.

Data at Rest is the measurement of data residing in the IIS database regardless of how it arrived there.

This content area puts into practice data quality indicators found in the May 2018 IIS Data Quality Practices document.

For the Proof of Concept, AIRA will be measuring:

- 24 Completeness Indicators
- 18 Validity Indicators
- 2 Timeliness Indicators

IIS DATA QUALITY PRACTICES

TO MONITOR AND
EVALUATE DATA
AT REST

The 30,000 Foot View

Data at Rest in Four Steps

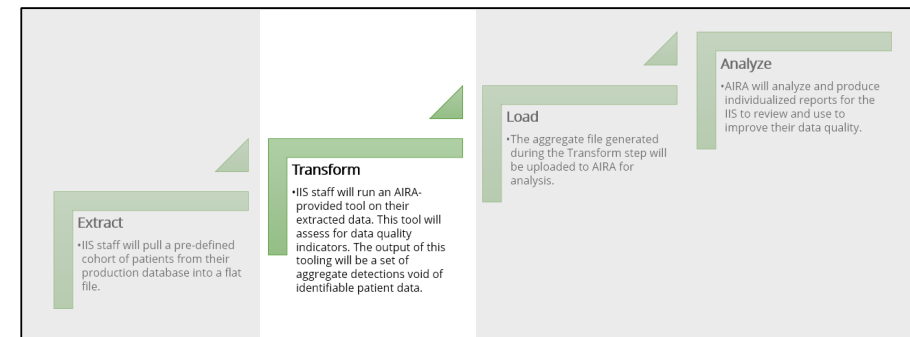

Extract

Goal	AIRA Provides	IIS Activities	Outcome
Extract data into a pre-defined flat file format. The extract shall only include patient and immunization records based on a birth date range. Further, the extract shall only include data elements necessary for the defined indicators	<ul style="list-style-type: none"> Flat file extract specification DAR Pilot Extract Specification DAR Extract Job Aid Example Extract Queries Technical Assistance 	<ul style="list-style-type: none"> Determine which data elements can/can't be extracted either due to technical or policy limitations Determine which field(s) in the database will be used per data element Perform extract of data per specifications 	<p>Two files will be created and used in the next step (Transform)</p> <ul style="list-style-type: none"> One patient file One immunization file

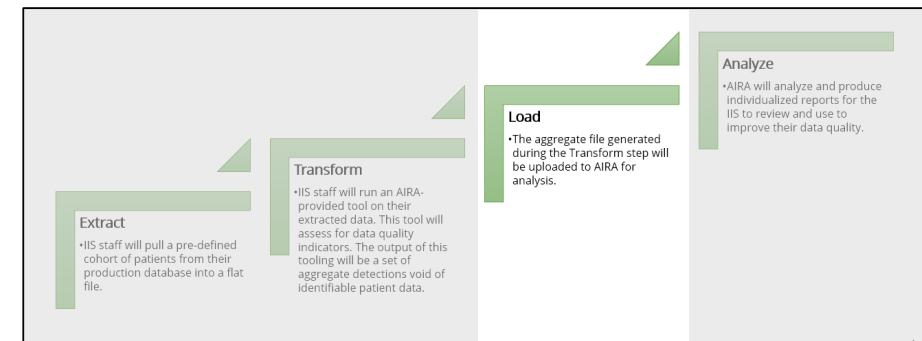

Transform

Goal	AIRA Provides	IIS Activities	Outcome
<p>Transform the patient and immunization file into a new file which is:</p> <ul style="list-style-type: none"> Free of record level data Free from identifiable data An aggregate summary of the data quality indicators selected for measurement 	<ul style="list-style-type: none"> Data Quality Detection Tool to transform the extracted record-level data into aggregate data quality detections Technical Assistance 	<ul style="list-style-type: none"> Ensure leadership support to use the Data Quality Detection tool Execute tool against previously extracted patient and immunization files 	<p>Two artifacts will be generated by the tool</p> <ul style="list-style-type: none"> Summary Report Encrypted aggregate detections file <p>You can ensure the extract worked as intended by reviewing the Summary Report</p> <p>The encrypted aggregate detections file will be used in the next step (Load)</p>

Load

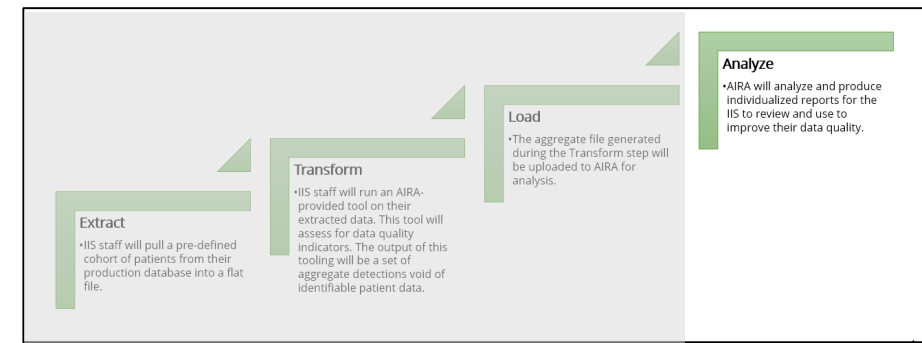

Goal	AIRA Provides	IIS Activities	Outcome
Submit the aggregate detections file to AIRA	<ul style="list-style-type: none">For the purpose of the Pilot, AIRA will work with each IIS to determine the best means to transmit the file to AIRA for analysis.Based on this feedback, AIRA will formalize one or more methods.	<ul style="list-style-type: none">IIS works with AIRA to move the aggregate detections file to AIRA.	AIRA has the aggregate detections file which is used in the next step.

Analyze

This step is performed by AIRA using the IIS supplied aggregate detections file. Two distinct reports are generated for the IIS.

IIS-Wide Report

- The IIS-Wide report looks at the entire cohort of data across the selected data quality indicators.
- This report gives a good view of the overall picture of the completeness, validity, and timeliness of the IIS data

Provider Breakdown Report

- The Provider Breakdown report stratifies the entire cohort of data by provider.
- This report gives a view of providers which may be contributing to data quality issues and can be used by the IIS for follow-up.

- Arkansas
- Connecticut
- Delaware
- Guam
- Kansas
- Missouri
- New Mexico
- Nevada
- Philadelphia
- South Carolina
- Washington

Congratulations

And we appreciate all your hard work!

- You are at the forefront of moving our community forward, ensuring:
 - Public Health and IIS have compiled high-quality data
 - Partners can easily access and use these data
 - Ultimately, patients are protected from vaccine preventable diseases

Thank you for all you do!

IIS Well Visit Reminder

It's time to schedule your 30-minute virtual AART Clinic appointment!

AART Clinics provide a full checkup of your IIS, which may include:

- Screening your IIS functionality compared to national standards and best practices
- Guidance on action steps you can take to become better aligned with standards
- Education on how to use the AART tool
- Review of your IIS readiness for the novel COVID vaccine

Clinic appointments will be available 11/02 through 12/04

Sign up now at:

<https://www.signupgenius.com/go/70A054DA9A82DA0F49-virtual>

Thank You!

Please complete this brief evaluation:

www.surveymonkey.com/r/AIRA2020Webinars

We'd love to hear from you!
