AMERICAN IMMUNIZATION
REGISTRY ASSOCIATION

AIRA Members & Partners Quarterly Meeting

October 18, 2021

Welcome – Christy Gray, President

This meeting is being recorded
and will be posted in the
AIRA repository

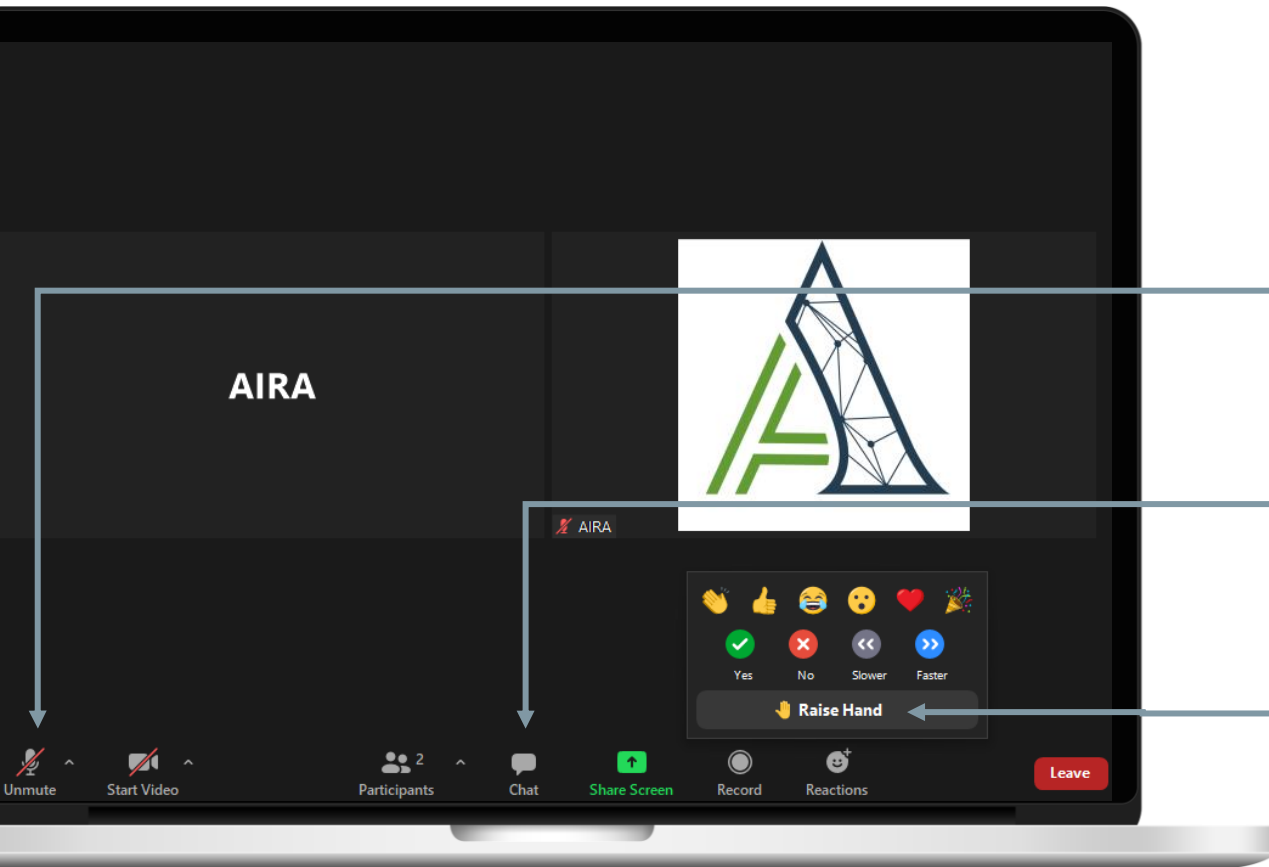

All phone lines
are muted

Welcome – Christy Gray, President

How do I ask a question?

There will be time allotted for Q&A following each of the updates.

Select the unmute icon and ask your question verbally.

Select the chat icon and type your question into the chat box.

Select the reactions icon, select “Raise Hand,” and you will be called on.

Technical Support

If you experience any technical issues during the meeting, please contact the **Jo Turcotte** via direct message in the Chat.

United States Food and Drug Administration (FDA) Update

Initial Results of Near Real-Time Safety Monitoring of COVID-19 Vaccines in Persons Aged 65 Years and Older

July 12, 2021

FDA has routinely been using screening methods to monitor the safety of COVID-19 vaccines and to evaluate potential adverse events of interest (AEI) related to these vaccines. One of these methods, called near real-time surveillance, detected four potential AEIs in the Medicare healthcare claims database of persons aged 65 years and older who had received the Pfizer/BioNTech COVID-19 vaccine. The four potential AEI are pulmonary embolism, acute myocardial infarction, immune thrombocytopenia, and disseminated intravascular coagulation. The screening methods have not identified these AEI after vaccination in persons 65 years and older who received the two other authorized COVID-19 vaccines.

IIS Partnership with FDA: Flow of Data

IIS

Data Partners

FDA/CBER
BEST System

IIS share vaccination data on health plan members with **BEST health plan data partners**

Data partners clean, validate, aggregate and analyze linked vaccination and claims data per FDA protocols

Data Partners provide aggregated summary data to **FDA/CBER**, to monitor vaccine safety and effectiveness.

Status of CBER-BEST and Data Partners IIS Jurisdiction outreach

We're in this together!

We each do a lot, but
Together we can do
even more.
We work not just for
ourselves, but for all
Americans.

- Thanks for all you do

National Center for Immunization and Respiratory Diseases (NCIRD) Update

Lynn Gibbs-Scharf

Association of Immunization Managers (AIM) Update

Kristy Westfall

Highlights

- **AIM has a NEW and improved website!!**
 - Launched Thursday, October 14th
 - Access to the new members only section of the site will require a one-time change in login information.
 - Check it out at www.immunizationmanagers.org!
- **Membership discussion around challenges with Moderna half dose boosters**
 - Shared concerns with the White House COVID team on AIM's weekly call
- **VCI and SMART Health Cards discussion with Executive Committee**
 - Still some confusion about the overall initiative and framework
 - Concerns about privacy (or perceived concerns) with open-source product implementation
 - Encouraged membership to provide feedback to AIRA

Highlights

- **Partners in Vaccination: A collaboration between the AAP, AIM and, NACCHO webinar**
 - Goal: Build shared understanding of the role each organization plays in routine childhood immunization and pathways to collaboration at the local and/or state levels
- **CDC joined the Executive Committee meeting (Oct 7th) and Member Meet call (Oct 8th) for an open discussion on the rollout of COVID vaccine for 5-11 year olds**
- **AIM hosted a webinar for Program Managers and Staff with Pfizer to discuss:**
 - Booster doses,
 - Pediatric COVID-19 vaccine,
 - New formulations, and
 - Packaging updates for adult and pediatric vaccine.
- **Partnering with Community Health Workers to Increase Vaccine Confidence Webinar**
 - Presenters shared perspectives from community health workers and their important role in health systems and public health and discussed best practices for building partnerships with community health workers.

Highlights

- **Diversity, Equity, and Inclusion (DEI) webinar series**
 - Recordings are available:
 - [Understanding DEI Terms/Definitions](#)
 - [Understanding Implicit Bias](#)
 - [Understanding How Racism Impacts Those Around Us](#)
 - [Understanding the Role of Systems in Being Anti-Racist](#)
- **AIM/National Association of School Nurses: School-located Vaccination Webinar**
 - Save the Date: Tuesday, Oct 26th @ 3:30pm EST – Registration information coming soon!
- **FDA VRBPAC: Pfizer COVID Vaccine, age 5-11**
 - Tuesday, Oct. 26th
- **AIM General Membership Webinar**
 - Thursday, Oct 28th @ 2pm EST

AIM Reminder Recall Postcard Campaign

- **Support available to help members address drops in childhood and adolescent coverage rates**
 - **Goal:** AIM to conduct the “heavy lifting” to get RR postcards in the hands of approximately 85,000 or more parents.
 - **AIM:** Pay for the postcard service, provide the postcard template (if desired), edit the content, and coordinate the mailing.
 - **Immunization Programs:** Provide AIM with contact information for the individuals from IIS.
- **Interested or want more information?**
 - Contact Emily Less at EmilyLess@gmail.com

LA: 26% increase MenACWY

CA: 80,000 cards delivered in March 2021

WY: 1,500 cards delivered in June 2021

AIM Resources

 - School-Located Vaccination Symposium
 - [Recording](#) and [slide deck](#) are available!
- **AIM and Immunization Action Coalition (IAC)**
 - [Communicating the Benefits of Influenza Vaccine during COVID-19](#)

Communicating the Benefits of Influenza Vaccine during COVID-19

Influenza (flu) severity varies from year to year, but flu always brings serious consequences. Flu outbreaks were limited in the 2020–2021 season due to widespread use of COVID-19 prevention measures like masks and social distancing. But flu viruses never went completely away. As COVID-19 prevention measures are relaxed, it's just a matter of time before flu increases, bringing with it serious complications like pneumonia and heart attacks.

Flu vaccination is the best way to prevent flu and its complications. Everyone age 6 months and older is recommended to get a yearly flu vaccine. This can markedly lower the risk of influenza-related illness, hospitalization, and death. And because flu and COVID-19 share many symptoms, preventing flu means fewer people will need to seek medical care and testing for flu as well as COVID-19, saving time, money, and stress. Flu vaccine may be given at the same time as COVID-19 vaccine. Take advantage of every opportunity to remind patients about the importance of flu vaccination.

CDC estimates the annual impact of flu from 2010–2020^a ranged from:

Source: CDC, Disease Burden of Influenza (www.cdc.gov/flu/about/burden/)

What are the Benefits of Seasonal Flu Vaccine?

Research shows flu vaccination:

- ✓ Reduces Hospitalization and Death
 - ✓ Pediatric deaths from flu were cut in half for children with underlying high-risk medical conditions and by two-thirds for healthy children
 - ✓ Influenza hospitalizations were cut in half for all adults (including those 65+ years of age)
 - ✓ Influenza hospitalizations dropped dramatically among people with chronic health conditions – by 79% for people with diabetes and 52% for those with chronic lung disease
 - ✓ Vaccinating long-term care facility (LTCF) staff reduces hospitalizations and deaths in LTCF residents
- ✓ Reduces Severity of Illness in Hospitalized Individuals
 - ✓ Among adults hospitalized with flu, intensive care unit (ICU) admissions decreased by more than half (59%), and they spent fewer days in the ICU if vaccinated
 - ✓ Children's risk of admission to a pediatric intensive care unit (PICU) for flu-related illness was cut by almost 75%
- ✓ Reduces Risks for Major Cardiac Events
 - ✓ Risk of a major cardiac event (e.g., heart attack) among adults with existing cardiovascular disease was reduced by more than one-third
- ✓ Protects Pregnant Women and Their Babies
 - ✓ For pregnant women, flu-associated acute respiratory infections were cut in half, and flu-associated hospitalizations were reduced by 40%
 - ✓ Influenza illnesses and influenza-related hospitalizations in infants under 6 months of age fell by half when their mothers were vaccinated

Vaccination rates^a remain well below optimal levels:

- 64% children 6 months–17 years
- 48% adults 18+ years
- 70% adults 65+ years
- 81% healthcare personnel
- 61% pregnant women

^aEstimates from the 2019–20 influenza season. SOURCE: CDC FluView (www.cdc.gov/flu/fluview/)

Tips
for Discussing Flu Vaccine

- ✓ Recommend flu vaccine at every clinical encounter. I strongly recommend you get a flu vaccination today. Flu vaccine may be given at the same time.

SMART Health Cards - Approved Statement

AIRA, IIS and VCI/Smart Health Cards Support

- AIRA and its members strongly encourage Immunization Programs and Immunization Information Systems (IIS) to explore and, where allowed by local law and policy, adopt SMART Health Cards for providing consumer access to vaccination records.
- SMART Health Cards have been embraced by VCI™, a voluntary coalition of public and private organizations committed to empowering individuals' access to a trustworthy and verifiable copy of their vaccination records in digital or paper form using open, interoperable standards. VCI leads development and implementation of the SMART Health Cards Framework, a non-proprietary approach for accelerating access to immunization records. AIRA, as well as several member and partner organizations, have signed on as VCI partners, with the belief that IIS can and should play a significant role as issuers of digital or paper vaccine credentials, and that broader consumer access to immunization information supports health equity and empowers individuals to share their health information as they choose.
- This recommendation does not preclude or prohibit IIS from providing more than one model for access to immunization records, but rather encourages adoption of SMART Health Cards as one common method across IIS where possible.

SMART Health Cards Global Forum

Leveraging SMART Health Cards to Reopen and Recover from COVID

Andy Slavitt
White House COVID
Response Senior

Thursday, October 28th
10:00 AM - 12:00 PM Eastern

Register

Can't make it? [Register](#) to receive a recording after the event.

- More information about how SMART Health Cards are being used
- Registration is required

Interoperability Training Course

- Introduction to interoperability concepts for public health practitioners working on Immunization Information Systems
- Course taught by Nathan Bunker
- Registration open **10/15 – 10/29**
 - Look out for community email
 - <https://www.surveymonkey.com/r/FallInterop>

Data At Rest

- Data At Rest content area moving into **Testing and Discovery!**
- Measurement of data residing in the IIS database regardless of how it arrived there.
- Email adiallo@immregistries.org to participate.

AIRA 2022 National Meeting

- **What we know:** NIC is scheduled for Aug 2022
- **What we don't know:** the format or timing of #AIRA2022

MIROW: Data Quality Guide

- Objective: Develop a MIROW Data Quality Guide that updates and replaces the existing MIROW guides on data quality
- Anticipated publication timeline: Fall 2022

A New Initiative: The Publication Project

- Objective: Foster increased publication of peer-reviewed IIS-related research
- Coming soon: We will convene a short-term SME work group to advise on this project
 - Interested in being considered for this work group? Send an email to info@immregistries.org and someone will be in touch

Education and Outreach Member Engagement Campaign

- Objectives:
 - Engaging and serving AIRA members
 - Replacing the LONG Education Survey with a campaign to ask questions in a variety of venues
 - Staying on top of what IIS need the most from AIRA

Upcoming Discovery Sessions

- October 25: AIRA's Interoperability Course
- November 15: IISAR

Communicating the Benefits of Influenza Vaccine during COVID-19

Influenza (flu) severity varies from year to year, but flu always brings serious consequences. Flu outbreaks were limited in the 2020–2021 season due to widespread use of COVID-19 prevention measures like masks and social distancing. But flu viruses never went completely away. As COVID-19 prevention measures are relaxed, it's just a matter of time before flu increases, bringing with it serious complications like pneumonia and heart attacks.

Flu vaccination is the best way to prevent flu and its complications. Everyone age 6 months and older is recommended to get a yearly flu vaccine. This can markedly lower the risk of influenza-related illness, hospitalization, and death. And because flu and COVID-19 share many symptoms, preventing flu means fewer people will need to seek medical care and testing for flu as well as COVID-19, saving time, money, and stress. Flu vaccine may be given at the same time as COVID-19 vaccine. Take advantage of every opportunity to remind patients about the importance of flu vaccination.

CDC estimates the annual impact of flu from 2010–2020* ranged from:

What are the Benefits of Seasonal Flu Vaccine?

Research shows flu vaccination:

Reduces Hospitalization and Death

- ✓ Pediatric deaths from flu were cut in half for children with underlying high-risk medical conditions and by two-thirds for healthy children
- ✓ Influenza hospitalizations were cut in half for all adults (including those 65+ years of age)
- ✓ Influenza hospitalizations dropped dramatically among people with chronic health conditions – by 79% for people with diabetes and 52% for those with chronic lung disease
- ✓ Vaccinating long-term care facility (LTCF) staff reduces hospitalizations and deaths in LTCF residents

Reduces Severity of Illness in Hospitalized Individuals

- ✓ Among adults hospitalized with flu, intensive care unit (ICU) admissions decreased by more than half (59%), and they spent fewer days in the ICU if vaccinated
- ✓ Children's risk of admission to a pediatric intensive care unit (PICU) for flu-related illness was cut by almost 75%

Reduces Risks for Major Cardiac Events

- ✓ Risk of a major cardiac event (e.g., heart attack) among adults with existing cardiovascular disease was reduced by more than one-third

Protects Pregnant Women and Their Babies

- ✓ For pregnant women, flu-associated acute respiratory infections were cut in half, and flu-associated hospitalizations were reduced by 40%
- ✓ Influenza illnesses and influenza-related hospitalizations in infants under 6 months of age fell by half when their mothers were vaccinated

AIM Association of Immunization Managers
www.immunize.org/catg.d/p3115.pdf • Item #P3115 (9/21)

Vaccination rates* remain well below optimal levels:

- 64%** children 6 months–17 years
- 48%** adults 18+ years
- 70%** adults 65+ years
- 81%** healthcare personnel
- 61%** pregnant women

*Estimates from the 2019–20 influenza season. 10/14/21 CDC. www.cdc.gov/flu/fluaction/

Tips

for Discussing Flu Vaccine

- Recommend flu vaccine at every clinical encounter: "I strongly recommend you get a flu vaccination today. Flu vaccine may be given at the same time as COVID-19 vaccine."
- Keep it simple: "Flu vaccine helps reduce risk of hospitalization and death."
- Use a presumptive approach: "Today we are giving you your annual flu vaccination."
- Communicate why we vaccinate: "Vaccination prevents flu and severe outcomes of flu." "Preventing the flu means preventing missed workdays, doctor appointments, and testing because of flu symptoms. Flu vaccination can also help prevent flu and COVID-19 co-infections, which can cause more severe illnesses."¹
- Communicate the variability and unpredictability of flu: "Flu was limited when most people followed COVID-19 precautions, but the spread of flu is likely to resume as fewer people wear masks or socially distance. The spread of other respiratory illnesses has already increased."²
- Acknowledge that flu vaccination is not always a perfect match with the circulating virus types. But flu and flu-related severe illnesses are common. "The vaccine is the best way to reduce your risk of flu and its negative outcomes."

Buttons & stickers

www.immunize.org/shop

Shop IAC: Flu Vaccine Buttons and Stickers

Buttons and stickers may be pinned on lab coats, uniforms, other clothing, tote bags, or backpacks to show your support for influenza vaccination.

BUTTONS

Product Number: V2010

Description:

Brightly colored red, round button with white text and a metal pin that clasps on the back. Pin on your lab coat, uniform, other clothing, tote bags, or backpacks to show support for influenza vaccination. Wear it when flu vaccine is available in your clinic to remind patients and the public to protect themselves from influenza. Demonstrate your clinic-wide support for protecting everyone from influenza by giving buttons to all staff to wear. Button is understated in size but carries a bold message!

Buttons are delivered to you in bags of 10 buttons per bag.

Dimension:

The button measures 1.25" across.

Pricing (includes shipping and handling):

1 bag [10 total]	\$20.00	6 bags [60 total]	\$45.00
2 bags [20 total]	\$25.00	7 bags [70 total]	\$49.00
3 bags [30 total]	\$30.00	8 bags [80 total]	\$52.00

		5.0 mL (multi-dose vial)	25	2 years & older ³	186	90756

NOTES

1. IIV4 = egg-based quadrivalent inactivated influenza vaccine (injectable); where necessary to refer to cell culture-based vaccine, the prefix "cc" is used (e.g., ccIIV4); RIV4 = quadrivalent recombinant hemagglutinin influenza vaccine (injectable); aIIV4 = adjuvanted quadrivalent inactivated influenza vaccine.

2. An administration code should always be reported in addition to the vaccine product code. Note: Third party payers may have specific policies and guidelines that might require providing additional information on their claim forms.

3. Dosing for infants and children age 6 through 35 months:

- Afluria 0.25 mL
- Fluarix 0.5 mL
- Flucelvax 0.5 mL (24 through 35 months)
- FluLaval 0.5 mL
- Fluzone 0.25 mL or 0.5 mL

4. Afluria is approved by the Food and Drug Administration for intramuscular administration with the PharmaJet Stratis Needle-Free Injection System for persons age 18 through 64 years.
