Pediatric Dose Reporting

Poor Data Quality & Potential Adverse Clinical Outcomes

Prageet Kaang, Ph.D., M.P.H

Manager, Data Analytics Team, Texas Immunization Registry

The Texas Immunization Registry (ImmTrac2)

Is secure, confidential, safely consolidates & stores immunization records from multiple sources.

29.3 Million Clients' immunization records

35,933 Organizations

Agenda

- Background on COVID Pediatric Doses
- Correctly Reporting Pediatric Doses
- Issue-Incorrect Reporting and Consequences
- Approaches to Resolve Issue
- Challenges/Limitations
- Future Implications
- Questions

Background on Pediatric COVID Doses

FDA Authorizes Pediatric Doses

- On October 29, 2021, U.S. Food and Drug Administration (FDA) issued an Emergency Use Authorization (EUA) to permit the use of Pfizer-BioNTech COVID-19 Vaccine to prevent COVID-19 in individuals 5 years of age and older.

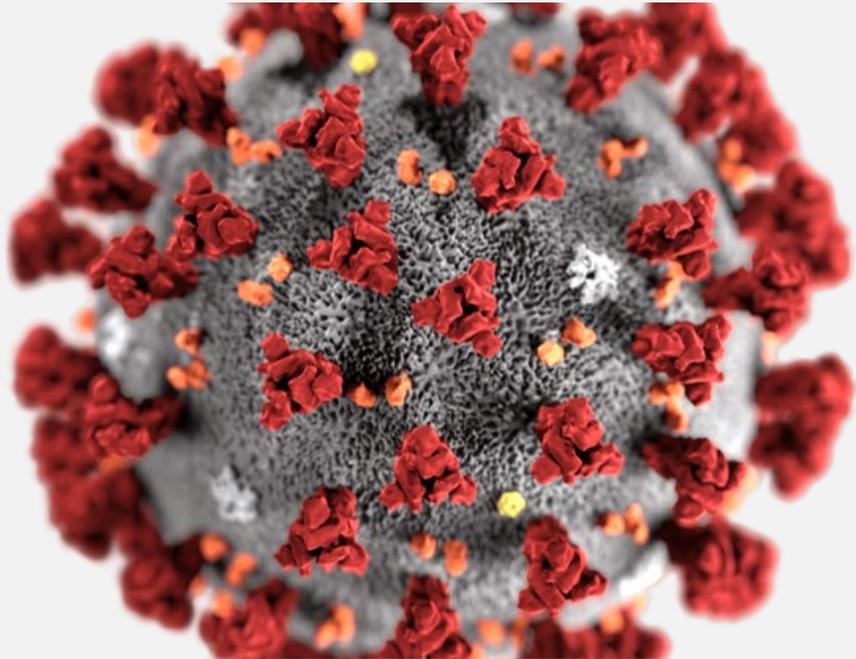

5-11 Years of Age Recommendations

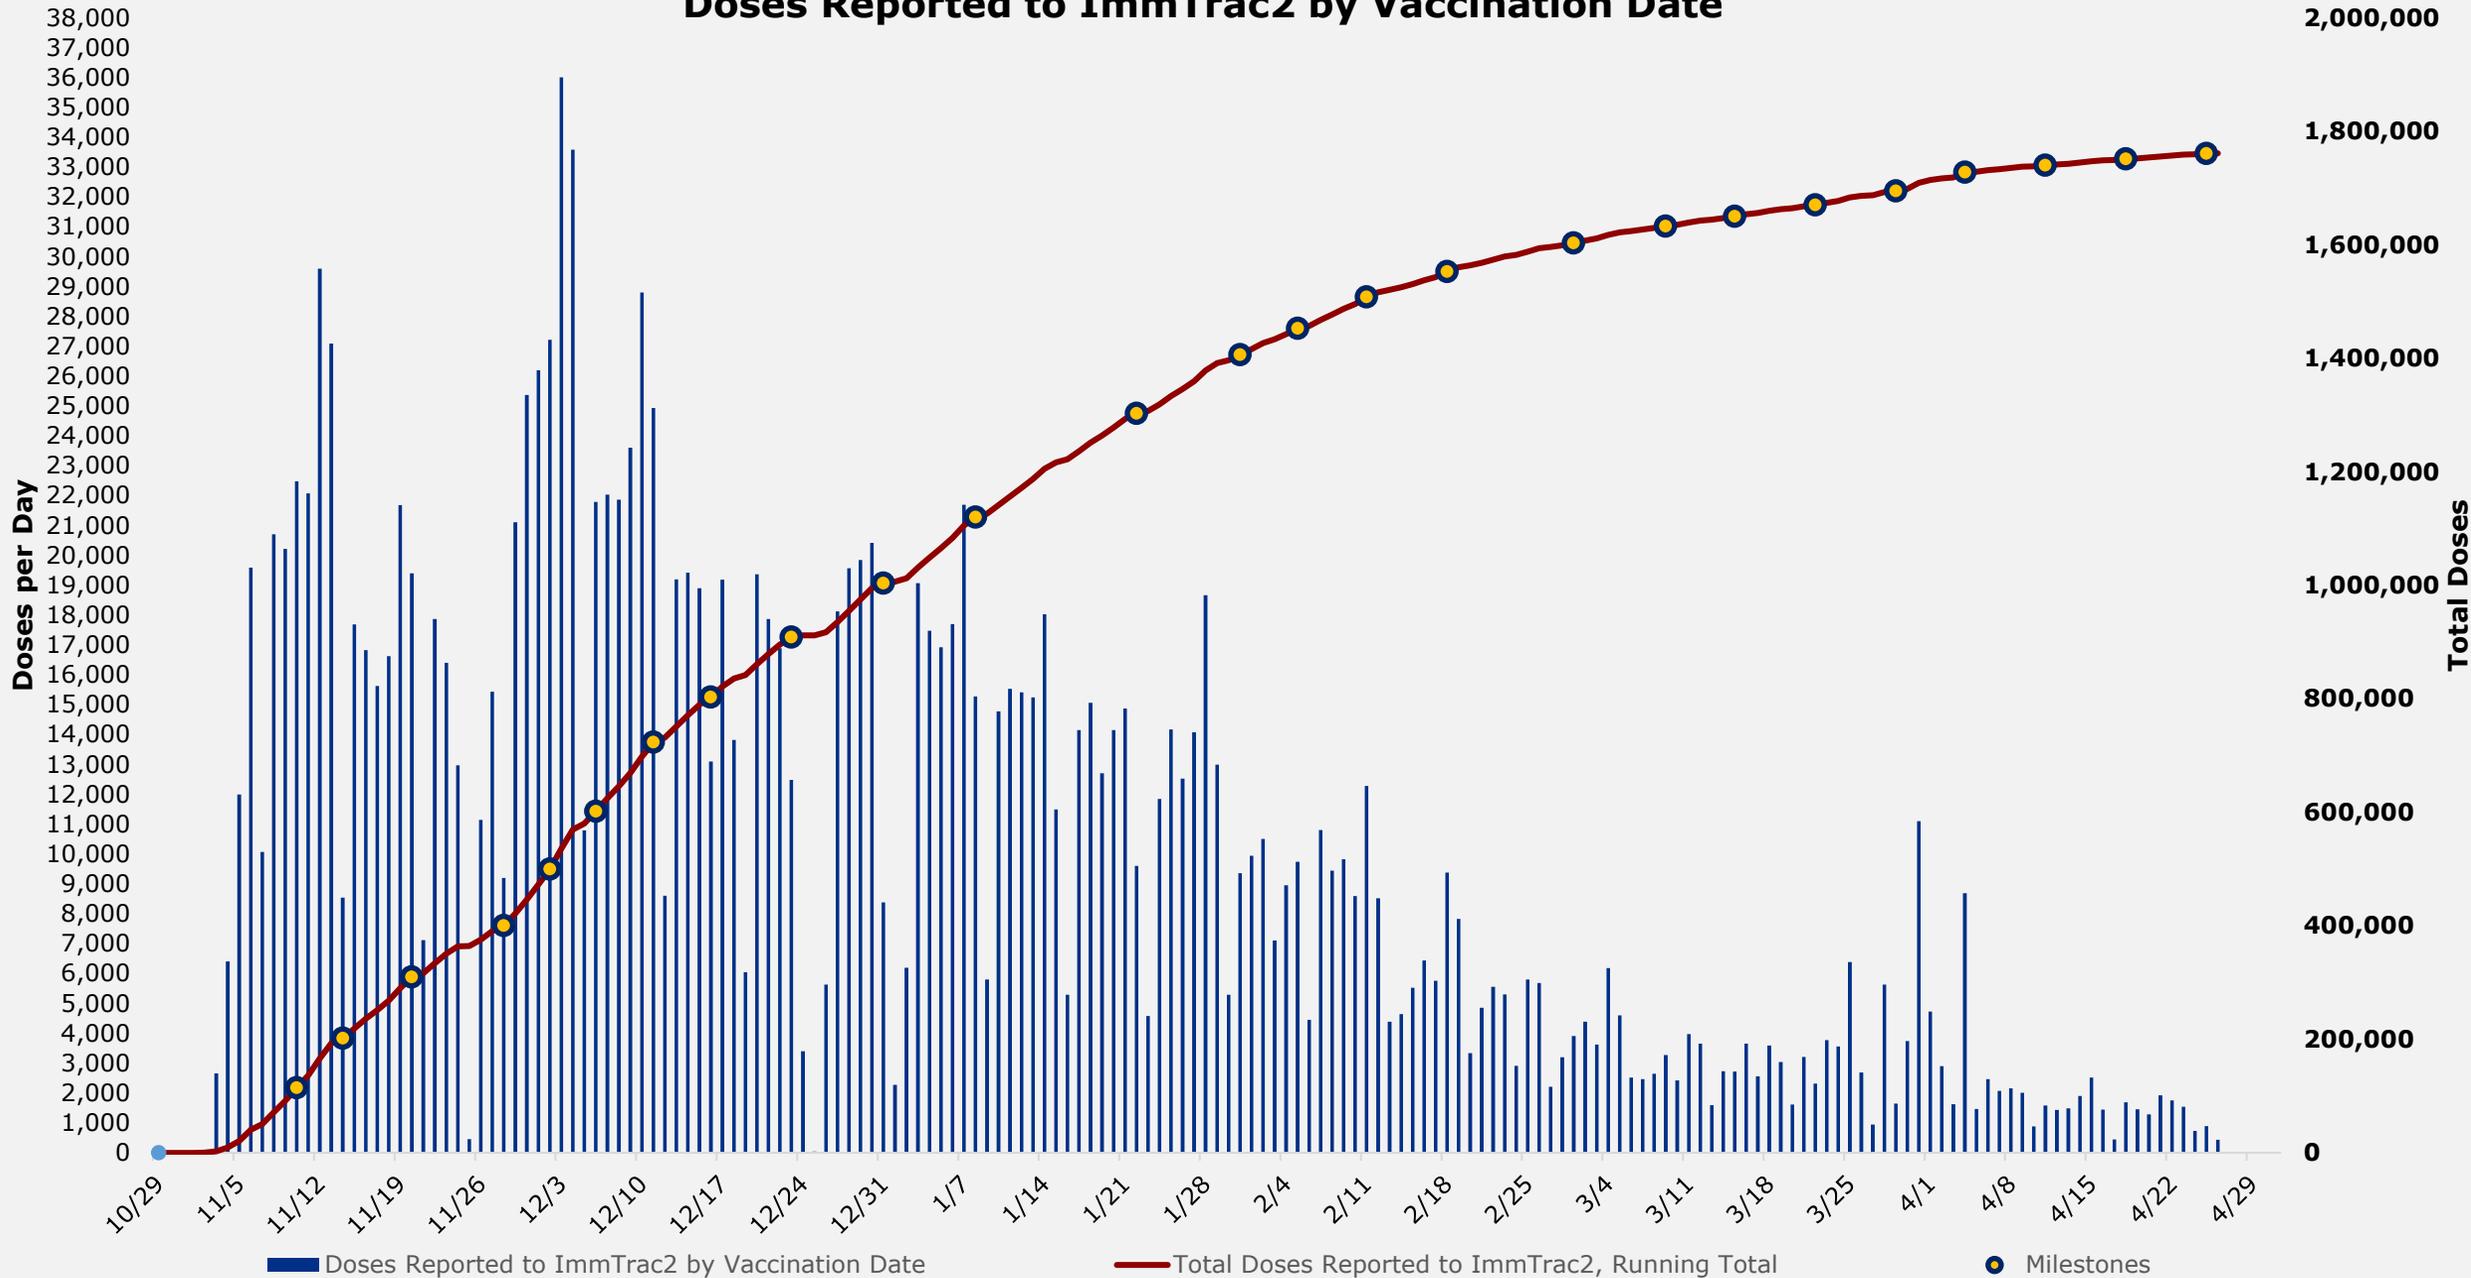

- Recommendations
 - Administered intramuscularly
 - 2 Dose Primary Series – second dose at least 21 days
 - **Dose size: 10 mcg**
- For immunocompromised individuals ages 5-11, **an additional dose is authorized and recommended at least 28 days** after second dose is administered

Pediatric COVID Dose Reporting in Texas

Reporting Through Data Exchange

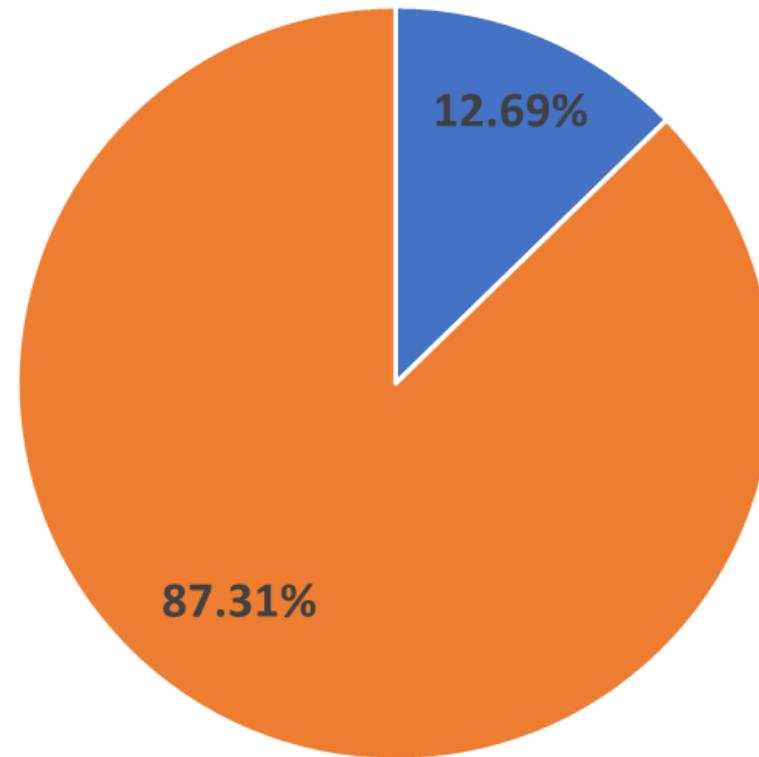

- Provider/Organization must report the [CDC vaccination codes](#) assigned to the vaccination. Providers can report either NDC (Use or Sale) or the CVX Code.

Health Services

Incorrect Reporting of Pediatric Doses

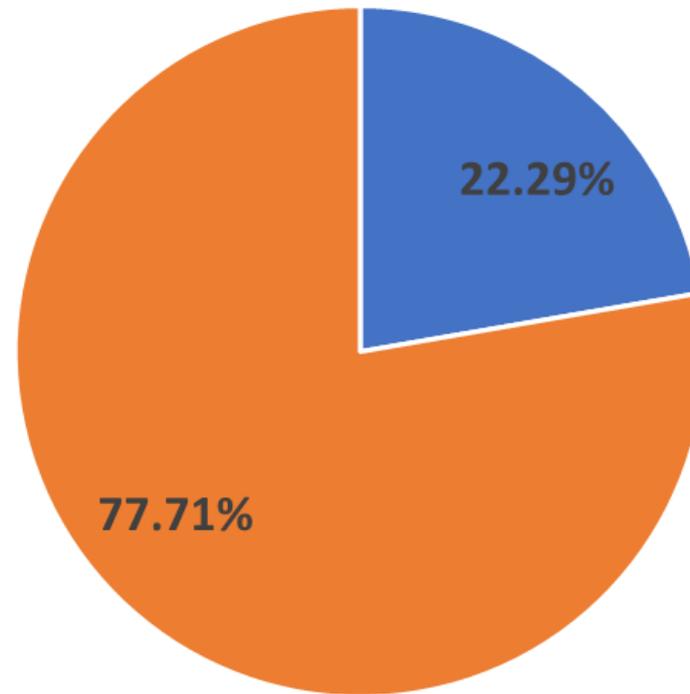

■ Incorrectly Reported ■ Correctly Reported

Texas Department of State Health Services

Incorrect Reporting By Record Source

- Doses entered through DX (BiDX and FTP)
- Doses entered through User Interface

Let's get all the tools!

Software Used:

ImmTrac2 Application

SQL Developer

Tableau

Excel

Texas Department of State
Health Services

Three Major Underlying Issues

- Reporting doses with an Incorrect Tradename
- Reporting Incorrect Date of Vaccination
- Client received **adult** formulation instead of **child** formulation

Example of Incorrect Trade Name

Vaccine Group	Date Admin	Age At Immunization	Series	Vaccine [Trade Name]	Dose	Owned?	Reaction	Hist?	Disaster	Edit
SARS-COV2	01/27/2022	8Y	1 of 2	COVID-19.mRNA.LNP-S,PF,30mcg/0.3mL [Pfizer COVID-19 Vaccine ®]	Full	No	.		Yes	

Vaccines Recommended by Selected Tracking Schedule

Correct Trade Name: ComirnatyTS 10mcg/0.2 ml

Example of Incorrect Date of Vaccination

- Year of Birth for Client is 2004
- Year of Administration is 2011

Vaccine Group	Date Admin	Age At Immunization	Series	Vaccine [Trade Name]	Dose	Owned?	Reaction	Hist?	Disaster	Edit
SARS-COV2	05/27/2011	6Y 6M	1 of 2	COVID-19,mRNA,LNP-S,PF,30mcg/0.3mL [Pfizer COVID-19 Vaccine ®]	Full	No		Yes	Yes	

Child gets the incorrect dose!

Texas Department of State
Health Services

**BUT WHY IS THIS
IMPORTANT?**

Consequences of Incorrect Reporting

- Poor Data Quality
- Undercounting/Under reporting of pediatric doses administered in Texas
- Potential adverse clinical outcomes due to incorrect administration issues

Approaches to Resolve the Issue

Approach 1: Gov Delivery

- Registry sends a mass gov delivery email to all the providers, ImmTrac2 registry contacts and EHR vendors

Approach 2: Provider Webinars

- Providers educated on correctly reporting pediatric doses correctly through a series of 6 provider webinars.

Approach 3: Customized Reports

- Team developed a SQL script that extracted doses given by a particular organization to clients, ages 5-11, with the following filters:

```
WHERE O.SHORT_NAME IN (  
AND Vaccination date ≥ '29-OCT-2021'  
AND CVX code =208
```

Customized Client Level Reports

- **Client Demographics**

- Client ID
- Name
- Date of birth
- Address

- **Immunization Information**

- Date of vaccination
- Date Entered in ImmTrac2
- Trade Name, Manufacturer and CVX code
- Historical/Not historical
- Lot Number

Securely Data Sharing Client Data

If DX Provider

- Add the reports to their secure FTP folder
- Send follow up email

If Manual/Online reporter

- Create FTP folder
- Send credentials to point of contact
- Add the customized report

Outreach Strategy

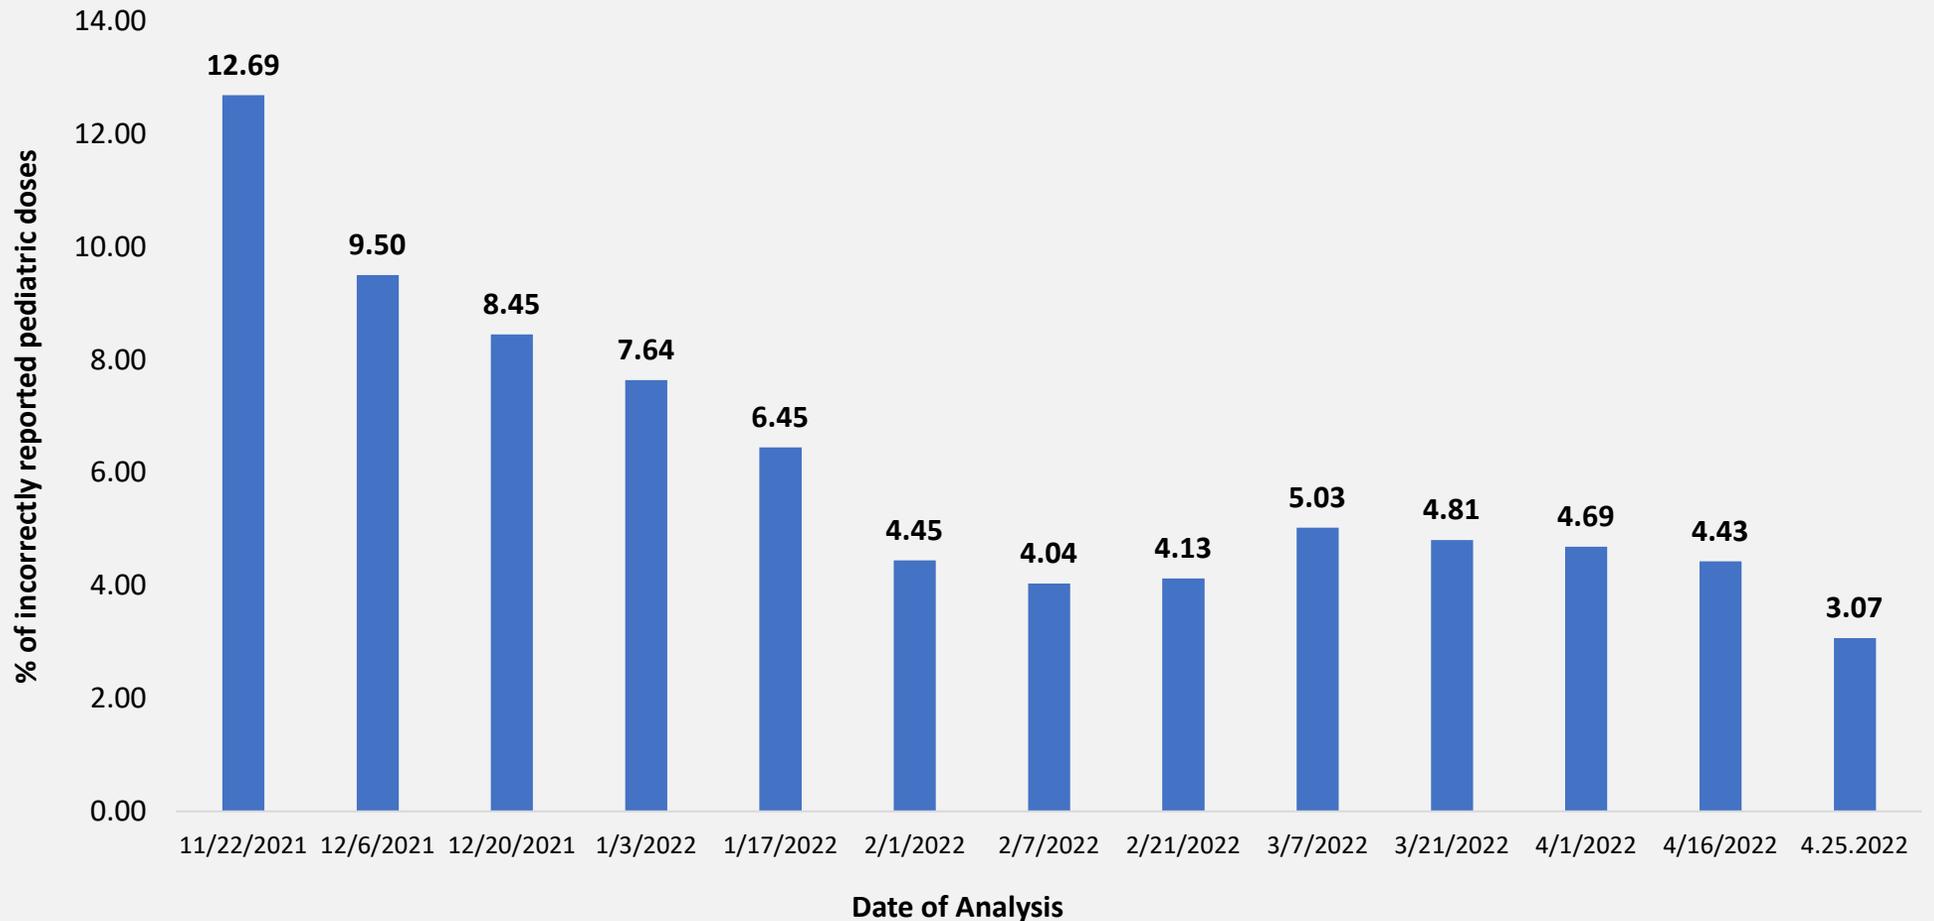

- Providers were given a week to respond, post which another follow up was conducted.
- Met virtually through Teams/Zoom to resolve reporting issues
- Performed multiple rounds of aggressive team meetings/emails, and we continue to meet monthly

Results from the Outreach

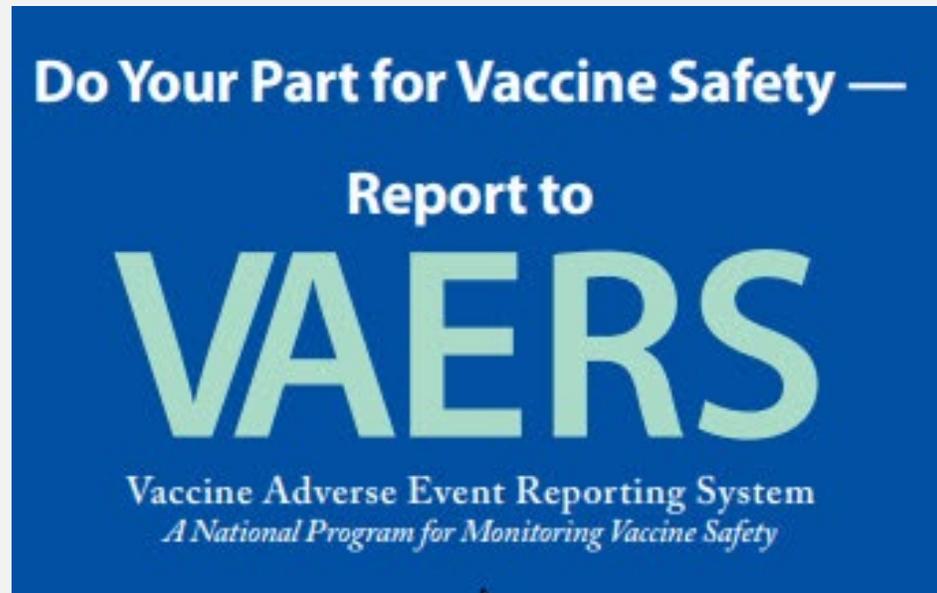

Decrease in Incorrectly Reported Pediatric Doses

Results from Outreach Continued

In addition, providers started reporting this as an adverse event to Vaccine Adverse Event Reporting System.

Challenges and Roadblocks

Major Limitation: Dose Shows Valid!

Add New Imms Add Historical Imms Edit Client Reports Print Official Immunization Record

Immunization Record Tracking Schedule

Vaccine Group	Date Admin	Age At Immunization	Series	Vaccine [Trade Name]	Dose	Owned?	Reaction	Hist?	Disaster	Edit
SARS-COV2	05/27/2011	6Y 6M	1 of 2	COVID-19,mRNA,LNP-S,PF,30mcg/0.3mL [Pfizer COVID-19 Vaccine ®]	Full	No		Yes	Yes	

Other Limitations

Lack of avenues to securely share the client level data

Provider frustration on correcting trade names in Immtrac2

Time consuming process

Needs ongoing monitoring/outreach

Future Implications

- Educate and Empower providers to administer correct COVID formulations
- Reporting to VAERS
- Improved data quality
