# End-User Updates

AART Software and Report Enhancements
January 2026

# Table of Contents

# Background

The Aggregate Analysis Reporting Tool ([AART](#)) is an application specifically developed to support the [Measurement and Improvement (M&I) initiative](#) to visualize and compile results and information on community-driven measures and tests related to the [immunization information system (IIS) Functional Standards](#). AART accomplishes this task by displaying test results for an IIS along with information and suggestions for improvements.

The tool is developed and supported by AIRA and is hosted on secure servers maintained by AIRA. AIRA technical staff routinely update AART, which impacts various IIS-specific reports, system features, and user navigation.

## Overview

This document provides details of software changes or updates that were made between March and August 2025 to enhance and improve the end-user experience while using AART.

Archived AART software updates impacting the end user are in [AIRA's Repository](#).

## Need help?

Please send your questions, requests for assistance, or recommendations for changes to improve AART to AIRA by submitting a [TA Request](#).

# September 2025

**Category: Security**
**Subject: New AART Session Invalidates Old**
When AART users attempt to log in to a new workstation/device while another AART session is still active, AART will terminate the previous session automatically. See AIRA Security Guidance for more information.
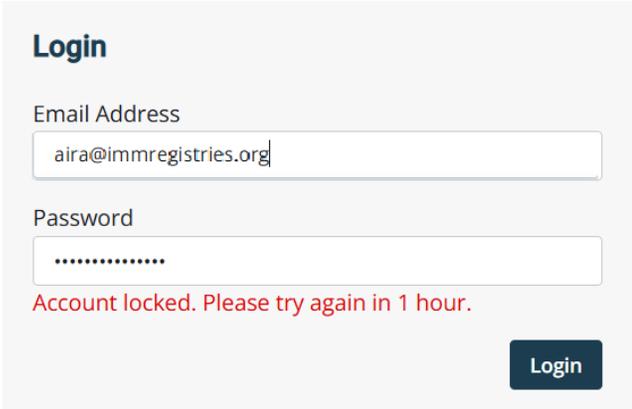

**Category: Security**
**Subject: Automatic Session Timeouts**
AART will automatically log out a user after 60 minutes of inactivity. See AIRA Security Guidance for more information.

**Category: Users**
**Subject: AART Account Locked After Failed Login Attempts**
AART user account will be locked for 1 hour after 10 failed login attempts. See AIRA Secuirty Guidance for more information.

**Category:** AART Users
**Subject:** Yearly Testing System Verification

Every year in January, AART admins will see the Verification of Testing System Details screen immediately upon logging in to AART. AART will not allow the AART admins to bypass the screen until responses to the questions are provided. This verification coincides with the annual validation of content areas tested for M&I. If a jurisdiction has more than one AART admin, only one administrator needs to respond to the questions. AART admins are also able to view historical responses within AART interface.

**Category: Assessment Reports – Clinical Decision Support (CDS)**
**Subject: Test Case Level Displays CVX Submitted in VXU**
When reviewing the evaluations table for a specific test case in an assessment CDS report, the vaccine evaluated was updated to display the CVX that was submitted in the VXU.

## 2015-0022 Adult Patient has received PCV13 but has no history of PPSV23

**Category: AART Policies**
**Subject: Update to AIRA Privacy Policy and Terms of Use**

AART has updated the AIRA Terms of Use and AIRA Privacy Policy to ensure continued compliance and security. Upon a user's next sign-in, the user will be prompted to review and accept these updated terms to maintain access to the platform. Once they have provided their electronic signature, the prompt will be dismissed, and they can proceed directly to the application as usual.
