

IIS Data Quality Visualization Using PowerBI

Mary Woinarowicz, MA
NDIIS Manager

BACKGROUND

North Dakota Immunization Information System (NDIIS)

Web-based version first established in 1996.

Lifespan system that includes records for 100% of ND residents, including all adults 19 and older.

Houses a total of 1.46 million active client records and 19.85 million dose records.

99% of doses are entered within 30 days of administration and 90% of doses are entered within 1 day.

Program Needs

- Data Quality Dashboard completed in September 2022
 - ✓ support IIS program, COVID vaccine program, and VFC program needs
 - ✓ bring in existing data and reports
 - ✓ add additional metrics to monitor IIS data quality and provider data entry
 - ✓ published to state PowerBI service and shared directly with the Immunization Unit Director, Adult/COVID Vaccine Manager, and VFC Program Manager
- Use as much existing data as possible
- Make dashboard updates as easy and efficient as possible

Bringing data together

Monthly Error Reports

- Assess data entry and administration errors by VFC providers
- VFC Coordinators review and follow-up on corrections

On-Demand COVID Data Entry Monitoring

- As potential issues came up, IIS data was reviewed
- COVID coordinators would review and follow-up on corrections

Quarterly Reports

- Assess provider-level infant, pediatric, adolescent rates for VFC providers
- Sent to providers
- Used by VFC program for annual awards

Interoperability Metrics

- Assess data entry for interoperable providers
- Sent to provider and EHR contacts

Additional data

IIS Data Entry Timeliness and Completeness

- Overall and provider-level data entry timeliness
- Demographics and vaccination data completeness by provider
- Adult opt outs

COVID Data Entry Errors

- Provider-level data entry errors specific to COVID doses entered by COVID-enrolled providers

Provider Enrollment and Doses Administered

- IIS, COVID and VFC provider enrollment numbers
- Pediatric doses administered by non-VFC providers for targeted outreach

Vaccine Returns and Wastages

- public vaccine returned by return reason
- public vaccine wasted by wastage reason

Final Product

- Page 1 – IIS data completeness
- Page 2 – non-COVID vaccine administration and data entry errors
- Page 3 – COVID vaccine administration and data entry error
- Page 4 – timeliness of data entry
- Page 5 – VFC provider coverage rates
- Page 6 – other data metrics
- Page 7 – public vaccine returns and wastages
- Page 8 – interoperability metrics

Dashboard pages can be filtered to:

- *compare multiple months*
- *show metrics by individual provider*
- *show metrics based on COVID or VFC program enrollment status*

Data Quality Dashboard

Data Entry Completeness

- Updated Monthly
 - Requires extracting data from NDHHS and running through SAS
 - Assess % complete for required data elements
 - Demographic Data Completeness
 - Assess demographic data for clients with doses administered during the calendar month
 - Immunization Data Completeness
 - Assess doses administered during the calendar month
- Demographic data elements
 - Client Name (first, middle, last)
 - Race
 - Ethnicity
 - Sex
 - Address (street, state, zip code, county)
 - Email
 - Phone Number
 - Dose data elements
 - Lot Number
 - Expiration Date
 - Manufacturer
 - Funding Source
 - Dose Volume
 - Administration Site
 - Administration Route

Data Entry and Administration Errors for Non-COVID Doses

- Updated monthly
- Uses error report data run for the VFC program
- Expanded to look for errors by all providers, not just VFC-enrolled sites
- Assess doses administered during the calendar month

- Invalid doses administered
- Combination and single antigen vaccine given the same day
- Expired doses administered
- Administered doses entered as historical
- Unspecified vaccines entered as administered
- Dose date same as birthdate (non-Hep B)
- Administered vaccine not on market
- OPV administered after 4/1/2016
- Non-routine vaccine entered as public funding
- Publicly funded doses with Not Eligible VFC status
- Adult doses administered marked as public funding source
- DTaP given after age 6
- Hepatitis A given before 1 year
- Adult presentation given to under 18
- Adult presentation given to under 18
- Hib given after age 5
- HPV given before age 9
- MMR, Varicella given before age 1
- PPSV23 given before age 2
- Rotavirus given after 8 months
- Td/Tdap given before age 7
- Monkeypox given before age 18
- HPV given after age 45 years

Data Entry and Administration Errors for COVID Doses

- Updated monthly
- Requires extracting data from NDIIS and running through SAS
- Assess number of COVID vaccine doses entered during the calendar month with data entry or administration errors

- Invalid lot number documented
- Invalid manufacturer documented
- Invalid expiration date documented
- Dose administration date before 12/14/2020
- Vaccine given outside authorized age group
- Non-US vaccine entered as administered
- Expired dose administered
- Unspecified vaccine entered as administered
- Monovalent vaccine booster given after 8/31/2022
- Bivalent vaccine given as primary series dose

list:

Doses are counted as having an invalid manufacturer when the manufacturer documented in the dose record does not match the correct manufacturer for the vaccine type given.

Doses are counted as having an invalid expiration date if the date documented in the dose record is before 12/14/2020 or after 12/31/2023.

Data Entry Timeliness

- Updated monthly
- Uses raw data file extracted from NDIIS without running separate SAS analysis
- Assess doses administered during the calendar month
- Evaluates the number of days between administration and entry into the IIS

- % of doses administered during month entered into the IIS within:
 - 1 day
 - 1 to 7 days
 - 7 to 14 days
 - 15 to 30 days
 - more than 30 days

VFC Provider Coverage Rates

- Updated quarterly
- Uses rates data assessed for coverage reports sent to VFC-enrolled providers
 - No additional analysis is needed
- Includes provider patient population
- Used by VFC program to prioritize VFC and IQIP site visits
- Used for annual immunization provider awards

Infant rates for 24–35-month-olds up-to-date by 24 months

- 4:3:1:U:3:1:U series
- 4 DTaP
- 3 polio
- 1 MMR
- 3 hepatitis B
- Hib up-to-date
- 1 varicella
- PCV up-to-date
- 2 hepatitis A

Pediatric rates for 6-year-olds

- 5:4:2:3:2 series
- 5 DTaP
- 4 polio
- 2 MMR
- 3 hepatitis B
- 2 varicella

Adolescent rates for teens 13–15-years old up-to-date by 13 years

- 1 Tdap
- 1 MCV4
- HPV up-to-date
- 2 varicella
- 2 MCV4 (16–17 years)

Quarter

Q4 2022

Infant data = kids 24-35 months of age as of the end of the quarter who were up-to-date before turning 24 months.

Pediatric data = kids 6 years of age as of the end of the quarter who were up-to-date before the end of the quarter.

Adolescent data = teens 13-15 years of age who were up-to-date before turning 13 years.

Data for 2 doses of MCV4 are for teens 16-17 years of age.

Other Data Quality Metrics

- Updated monthly
- Metrics are populated from raw data files extracted from NDIIS without having to run separate SAS analysis
- Provider enrollment numbers look for VFC-enrolled sites, COVID-enrolled sites, and all ND provider sites active in the IIS
- Adult opt outs are the number of adult records marked as opted out in the IIS
- Pediatric doses administered was requested by VFC program
 - Identify providers giving vaccine to kids but not enrolled in the VFC program for targeted provider outreach

Enrollment

- VFC enrolled sites are flagged in their IIS provider record
- COVID enrollment data is exported when updated enrollment is run for submission to the CDC IZDL
- IIS enrollment is based on provider status and physical address as entered in their IIS provider record

Adult Opt Out

- Adults 19 and older can choose to opt out of the IIS
- Records are not removed from the IIS but are not searchable by users, do not return results in an RSP message, and no new data can be entered

Interoperability

- Updated quarterly
- Uses data routinely assessed for interop report cards
- Does require entry of messaging data into data table and running a small SAS code file
- Data quality and data entry metrics show comparison between interoperable providers/health systems/provider groups and non-interoperable providers

Data points include:

- Number of sites
- Number of different EHRs vendors
- Total VXU messages
- Total QBP messages
- Percent of VXU messages with errors
- Percent of bi-directional connections
- Percent of connections via state-wide HIE
- Doses administered by provider group
- Duplicate/fragmented person records created
- Data entry timeliness
- Messages received by month

Programmatic Use

Programmatic Uses

- Data reviewed monthly by unit director and program managers
- Have used dashboard to identify data clean-up activities
 - COVID coordinators currently working with providers on fixing invalid lot numbers and expiration dates
- Interoperability metrics used for grant reporting
- Built additional dashboards using data pulled together for data quality dashboard
 - ✓ Public-facing interoperability dashboard
 - ✓ Immunization dashboard for Medicaid Health Tracks program

Connected

25

Providers listed as *In Queue* have submitted their registration of intent to connect to the NDIIS and are currently awaiting to begin the formal on-boarding and technical testing process.

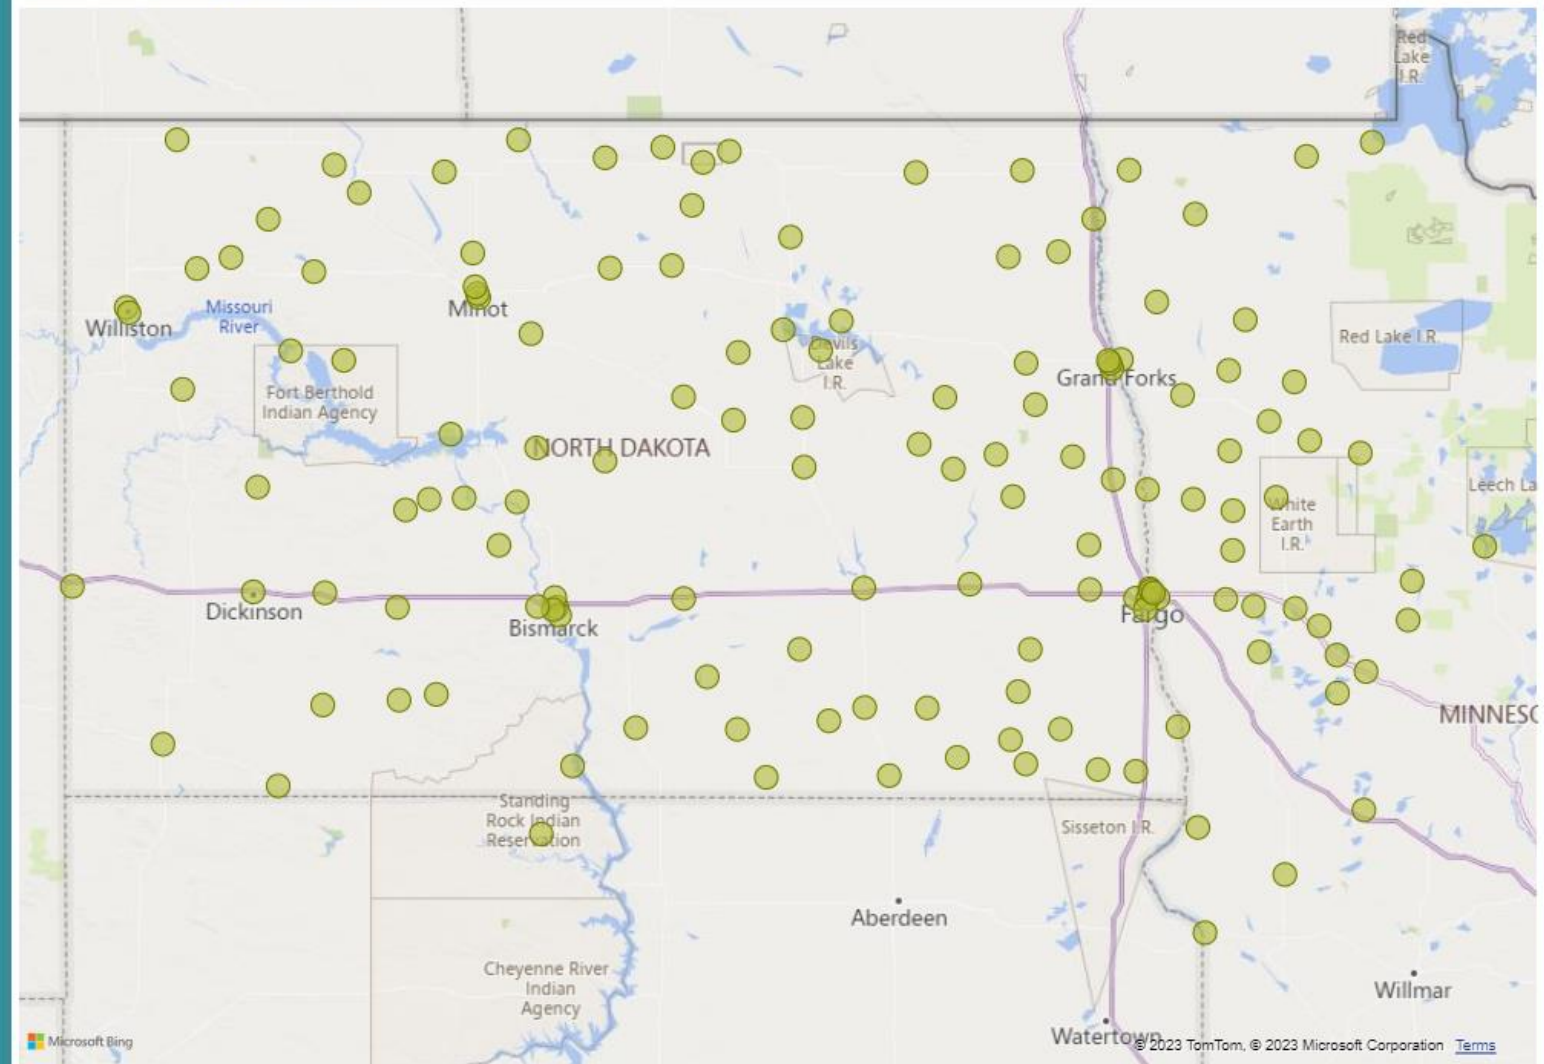

Providers listed as *Technical Testing* have completed their initial on-boarding and have started submitting HL7 test messages to the NDIIS for validation.

Providers listed as *In Production* have completed all testing and validation and have achieved on-going submission of immunization messages from their EHR to the NDIIS production environment.
