

Impact of HL7 Web Service Between NYC CIR and Managed Care Organizations

Tina S Lai, M.Sc.

Interoperability Unit Chief

New York City Department of Health and Mental Hygiene

AIRA 2025 National Meeting

Spokane, Washington

Outline

- Citywide Immunization Registry(CIR) and Managed Care Organizations
- MCOs Query Methods to the CIR
- Impact of Transitioning MCOs to HL7 Web Service
- Summary of Results
- Conclusions & Future Work

Citywide Immunization Registry and Managed Care Organizations

Citywide Immunization Registry (CIR)

- CIR is NYC's Immunization Information System (IIS)
- A population-based registry that began citywide in 1997
- Contains over 15 million patient records and more than 180 million immunization events
- Reporting requirements:
 - Mandatory for children 0 through 18 years of age
 - Verbal or written consent needed for adults 19 years of age or older
- Reporting methods:
 - (1) HL7 Web Service
 - (2) Online Registry (user interface)

Brief History of HL7 Web Services

- **2009** - The CIR started HL7 web service development.
- **2011** - First healthcare facility connected to report to the CIR HL7 Web Service
- **2021** - First MCO connected to query the CIR via HL7 Web Service
- CIR HL7 Web Service processes over **>600,000 HL7 reporting messages per month**
- Currently, over **>90% of the CIR immunization events** are reported via HL7 Web Service.

Managed Care Organizations (MCOs)

- MCOs are healthcare delivery systems that coordinate and manage healthcare services for their enrollees
- The primary goal of an MCO is to control cost, while maintaining or improving the quality of care for its' enrollees
- MCOs contract with hospitals, physicians, and specialists to offer a comprehensive range of medical services to their members at negotiated prices
- MCOs include private and public health insurance plans

MCOs' Report Cards for Quality of Care

- Report cards help maintain accountability for legal compliance of quality healthcare
- Quality of Care is evaluated by two annual public reports primarily
 1. NY State Report - Electronic Quality Assurance Reporting Requirements (**eQARR**)
 2. National Report - Healthcare Effectiveness Data and Information Set (**HEDIS Score**)

eQARR Prevention and Equity Measures

Year: 2023 ▼ Payer: Medicaid Managed Care ▼ Domain: Child and Adolescent Health ▼ Sub Domain: Child Preventive Care

Child Preventive Care - Statewide - Medicaid Managed Care

Plan Names ↓	Adolescent Immunization (Combo 2) ↑↓	Adolescent Immunization ↑↓	Childhood Immunization Status - Combo 3 ↑↓
MCO 1	44	93▲	75▲
MCO 2	28▼	81▼	53▼
Statewide Average	42	87	65
National Average	36	78	64

Key

- ▲ Significantly better than the regional average for measures in the Perinatal Health subdomain or significantly better than the state average for all other measures
- ▼ Significantly worse than the regional average for measures in the Perinatal Health subdomain or significantly worse than the state average for all other measures
- Sample size too small to report.
- * A lower rate is desirable. For more information about the risk-adjustment methodologies, see the [Technical Notes](#) section.

National HEDIS Score – Childhood Immunizations

— Prevention and equity	★★★★★
Children and adolescent well-care	★★★★★
Childhood immunizations Did children receive all recommended immunizations by age 2?	★★★★☆
Adolescent immunizations Did children receive all 3 recommended immunizations by age 13?	★★★☆☆

National HEDIS Score – Adult Immunizations

Other preventive services

Influenza immunizations for adults

Did members ages 19 and older receive recommended influenza immunizations?

Td/Tdap immunizations for adults

Did members ages 19 and older receive recommended Td/Tdap immunizations?

Zoster immunizations for adults

Did members ages 50 and older receive recommended zoster immunizations?

Pneumococcal immunizations for adults

Did members 66 and older receive recommended pneumococcal immunizations?

MCOs' Enrollees Immunization Data Gap

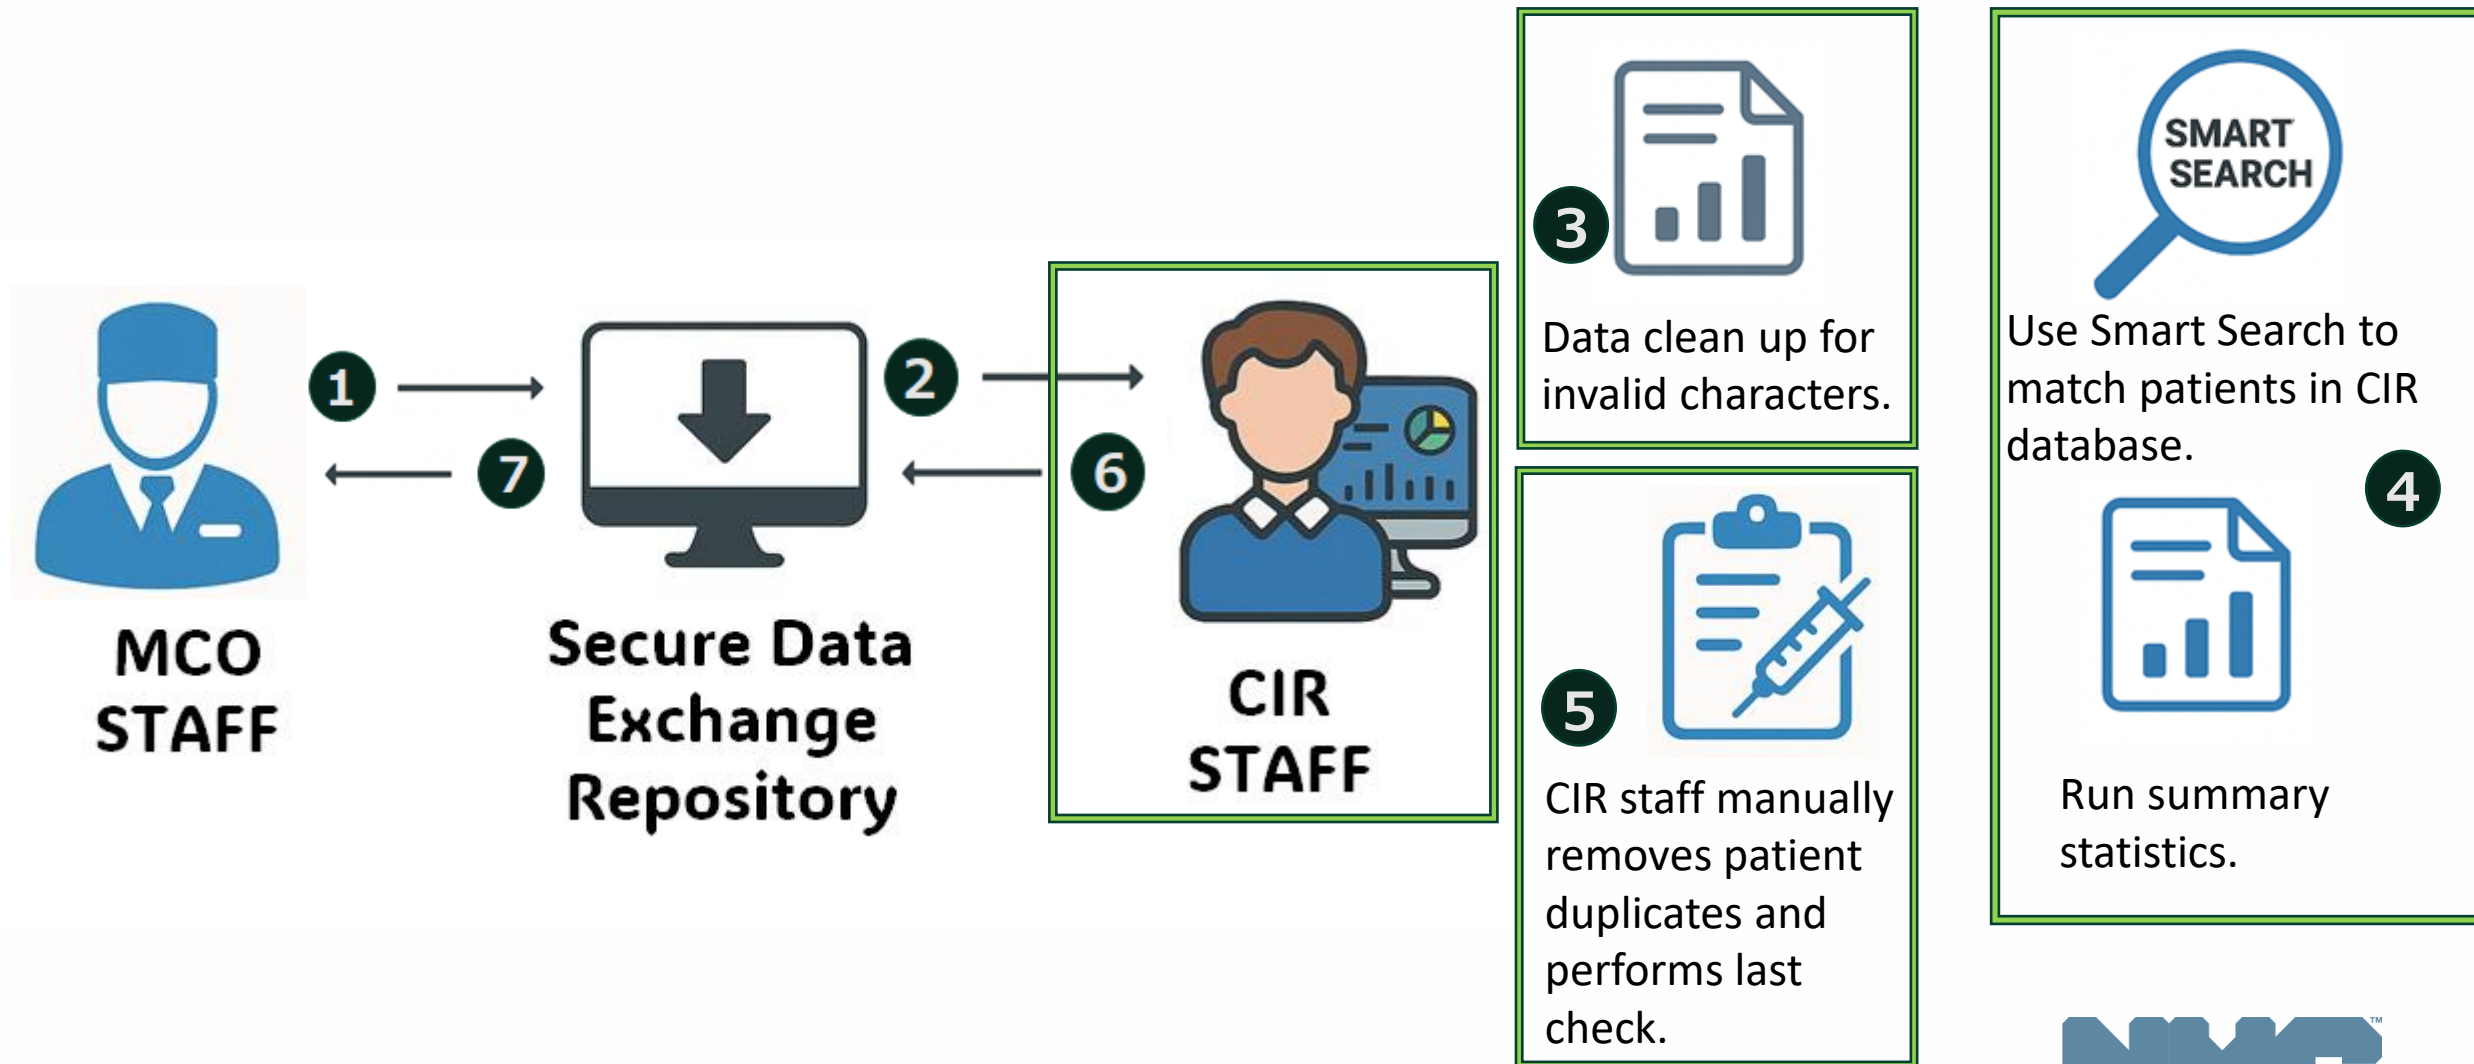

- MCOs are limited to only the immunization events that are billed to their plan.
- To form a complete picture of their enrollee's immunization coverage they work with immunization registries to fill in the data gap.
- MCOs are interested to include the full immunization history for all their enrollees to score high coverage measures in their NY State and Federal Report Cards.

MCOs Query Methods to the CIR

Old Data Exchange Interface (DEI)

- Process developed at CIR since 1999 to exchange patient immunization data with MCOs
 - In 1999, there were only 4 MCOs using the data exchange interface
- Currently there are 13 MCOs connected to the CIR
- The DEI was a manual query process that required a full-time data specialist
- It was resource-intensive, labor-intensive, and time-consuming

CIR Data Exchange Interface (DEI) Workflow

Transitioning MCOs to HL7 Web Service

Winter
2021

Opened HL7
Web Service
onboarding
to MCOs.

April
30th
2022

MCOs that
connected to
HL7 Web
Service, CIR
had their DEI
process
sunset April
2022.

June
30th
2022

DEI is sunset
for all users
by CIR in
June 2022.

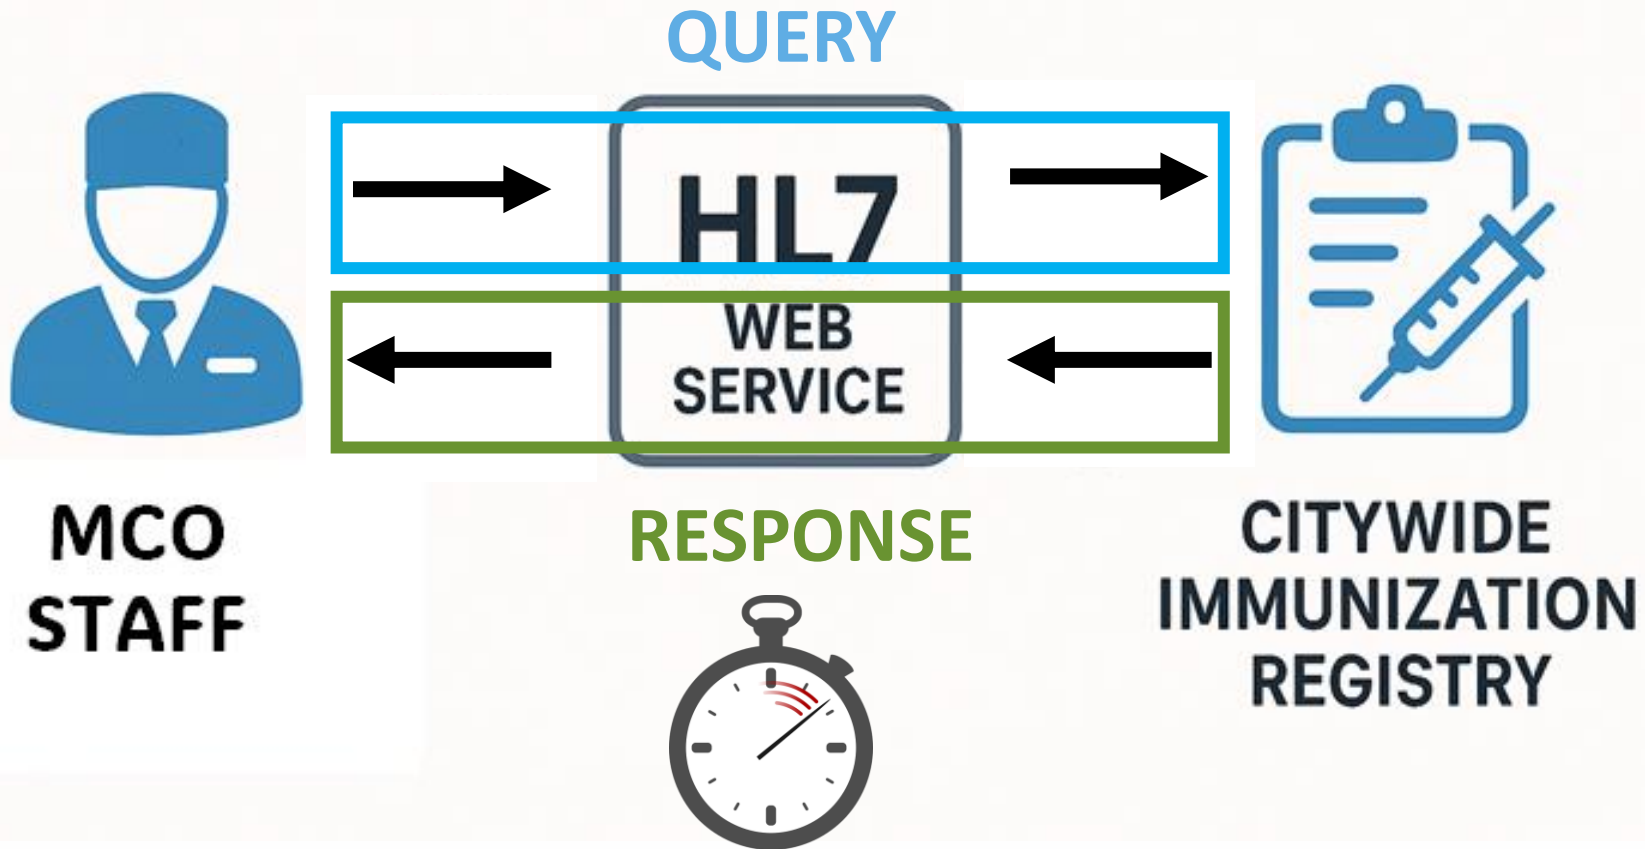

All MCOs received email notice on March 31st, 2022 that the final sunset date would be June 2022 for all DEI services.

New MCO querying method: HL7 Web Service

- A real-time, bi-directional health data exchange system.
- It supports CDC-endorsed SOAP Standard Interface Web Service Definition Language (WSDL)
- Within the first year of offering MCOs the HL7 Web Service, 4 MCOs were connected similar to beginning of DEI process in 1999.
- Majority of NYC MCOs were connected by 2023

New HL7 data workflow for MCOs

REAL-TIME and FAST!

Impact of Transitioning MCOs to HL7 Web Service

Objective

- Examine the impact of the HL7 Web Service for MCOs and the CIR

Evaluation Methods

- We conducted a retrospective comparison of MCO query patterns in 2021 and in 2023
- We included only MCOs that actively queried the CIR in both 2021 and 2023 (N=8)
- We did not include MCOs who were active in year 2022 because many MCOs were still in the process of migrating to the HL7 web service that year
- We looked at total annual HL7 queries and MCO's monthly HL7 query activity patterns.

Transition of MCOs to HL7 Web Service

HL7 Active MCOs

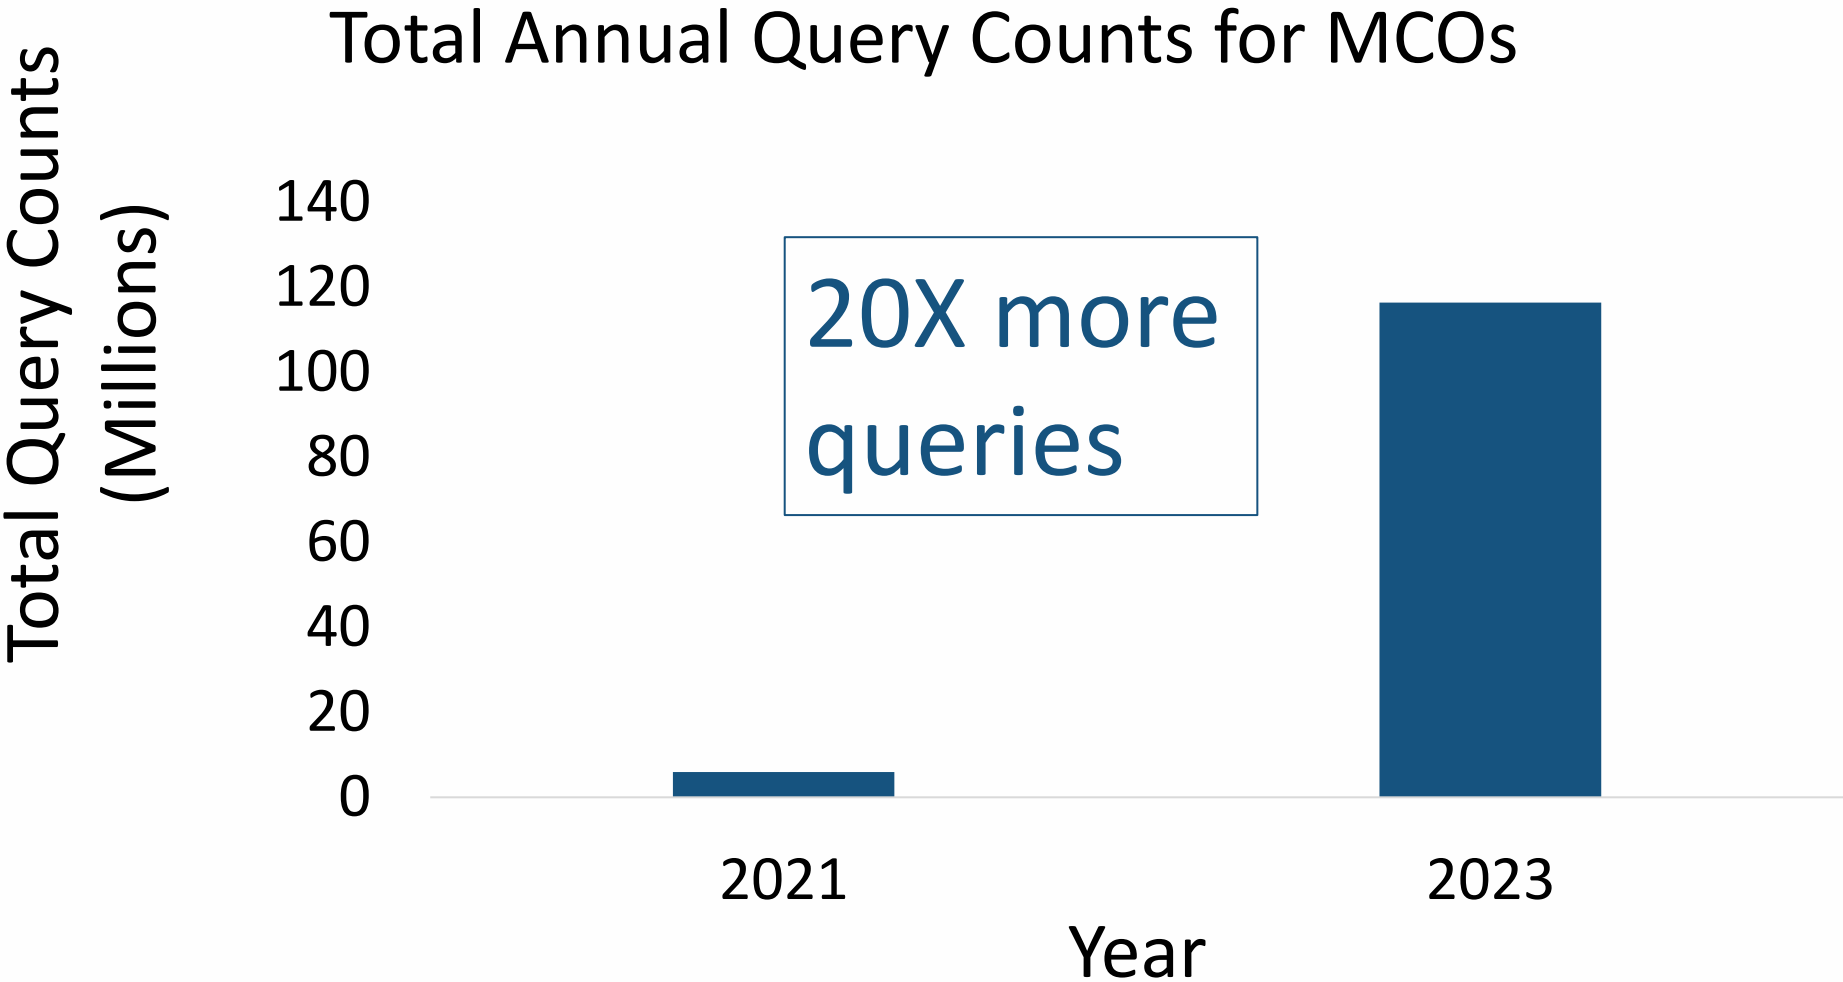

MCO Queries Are Increasing Every Year

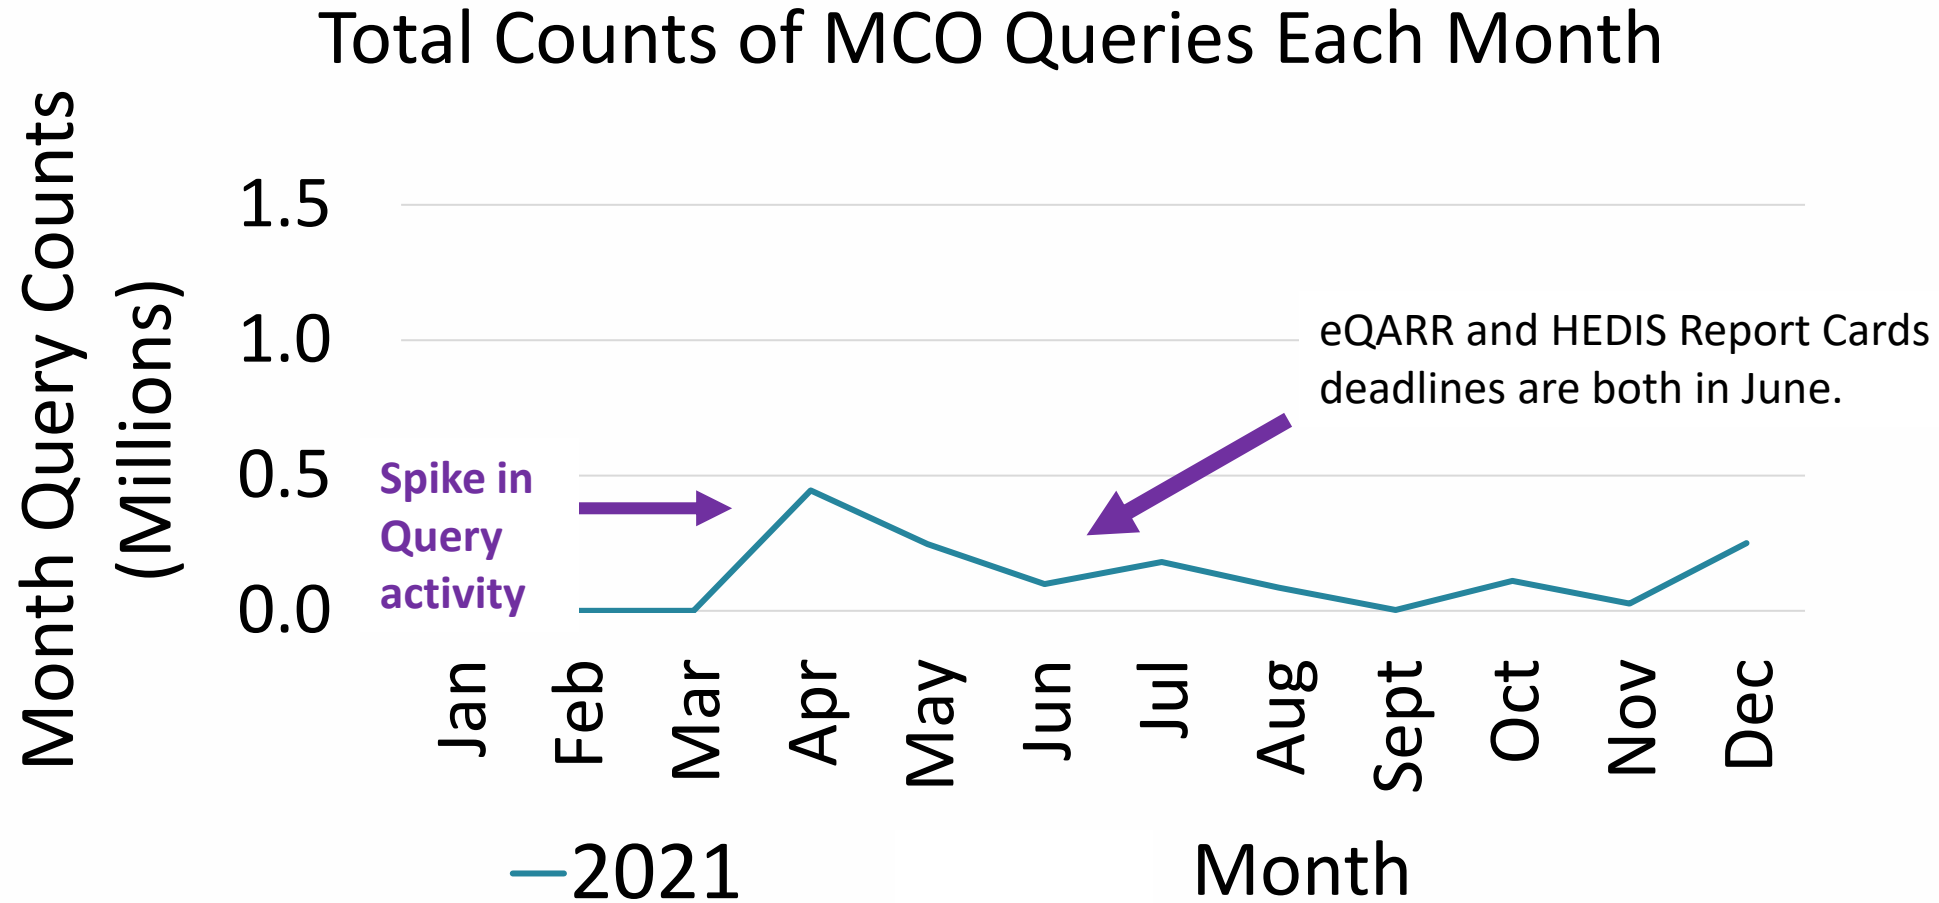

Annual Average MCO HL7 Query Counts

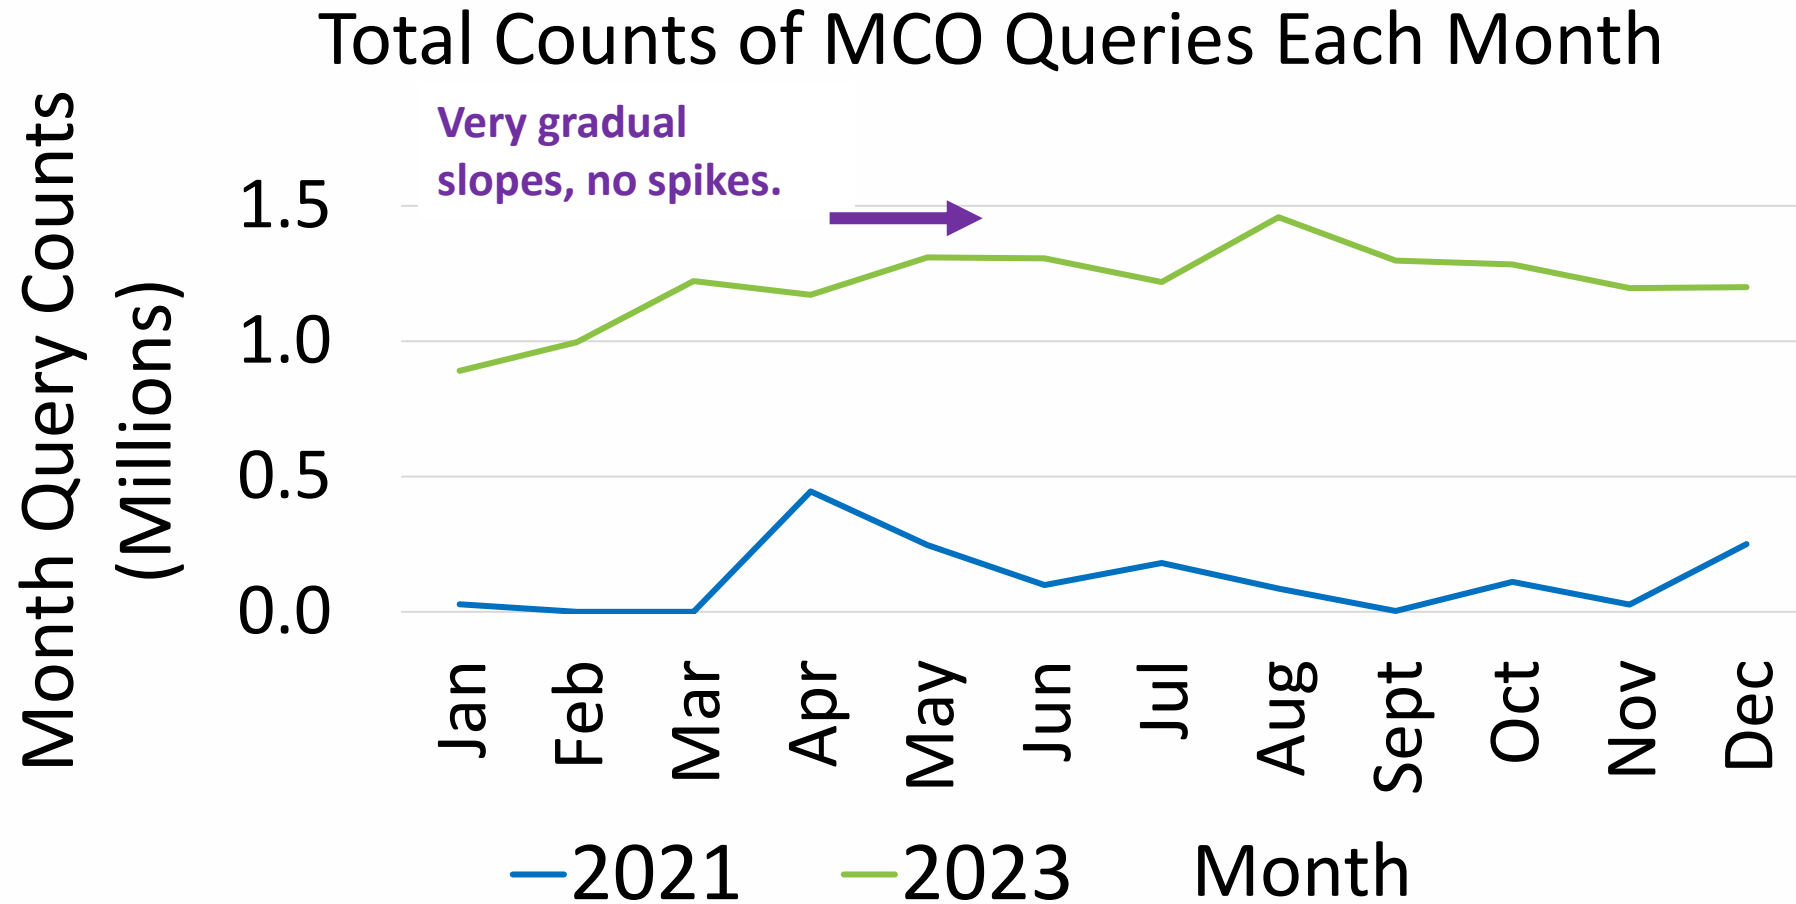

MCO Query Activity Increased 2021 vs. 2023 (n=8)

Monthly Query Patterns 2021 vs. 2023 (n=8)

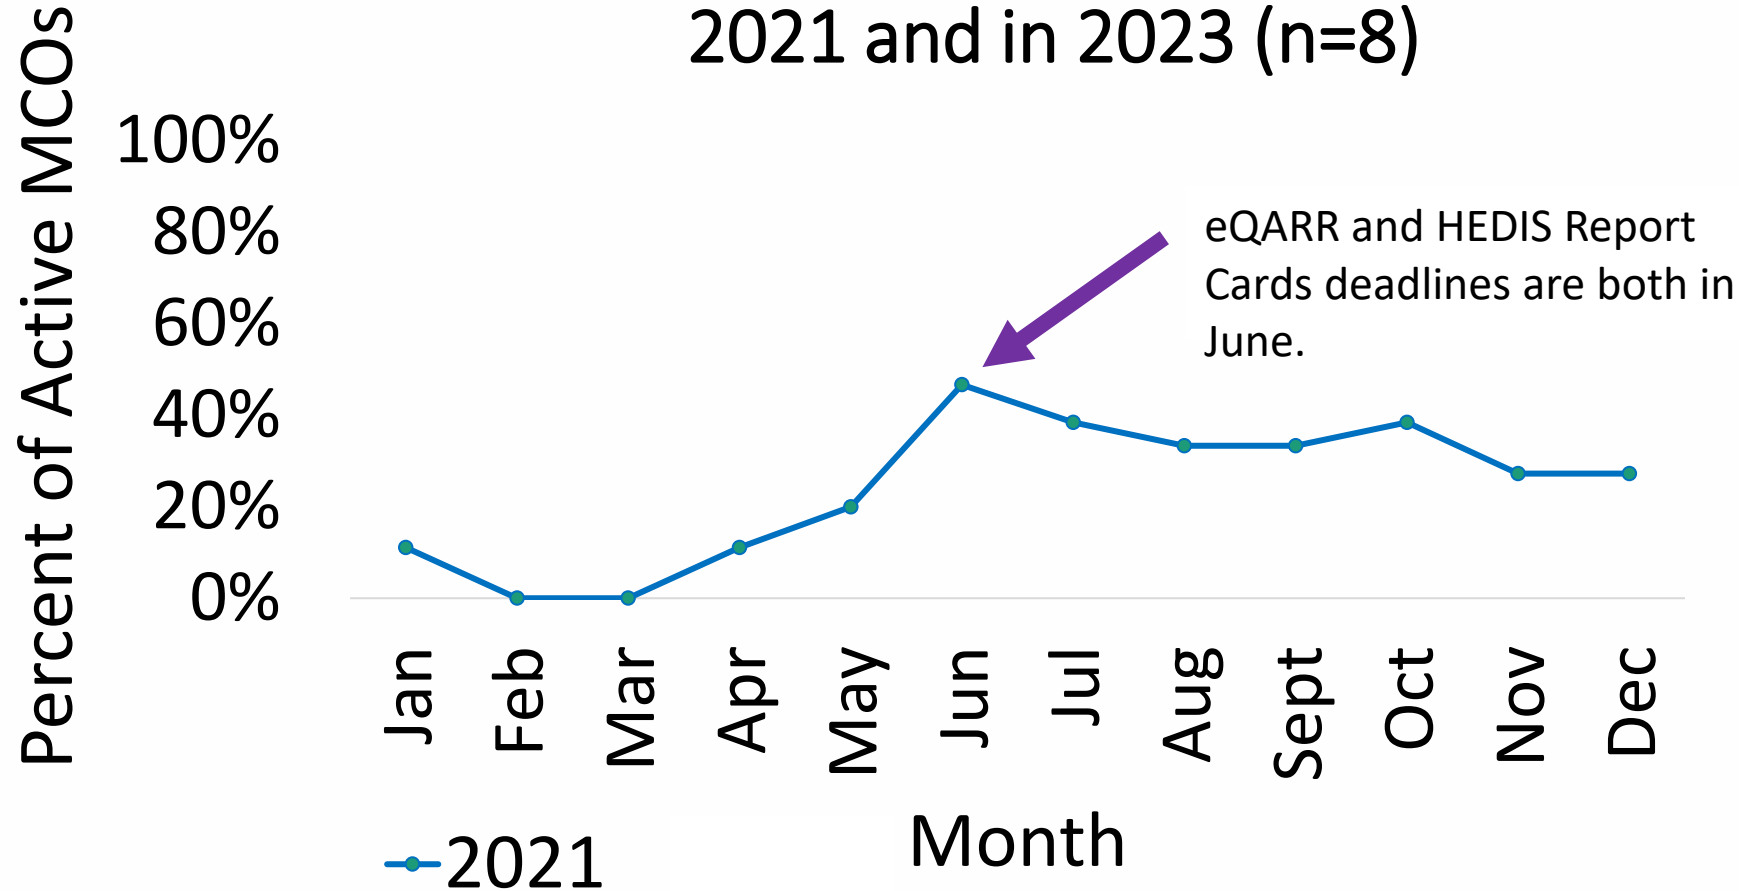

Monthly Query Patterns 2021 vs 2023 (n=8)

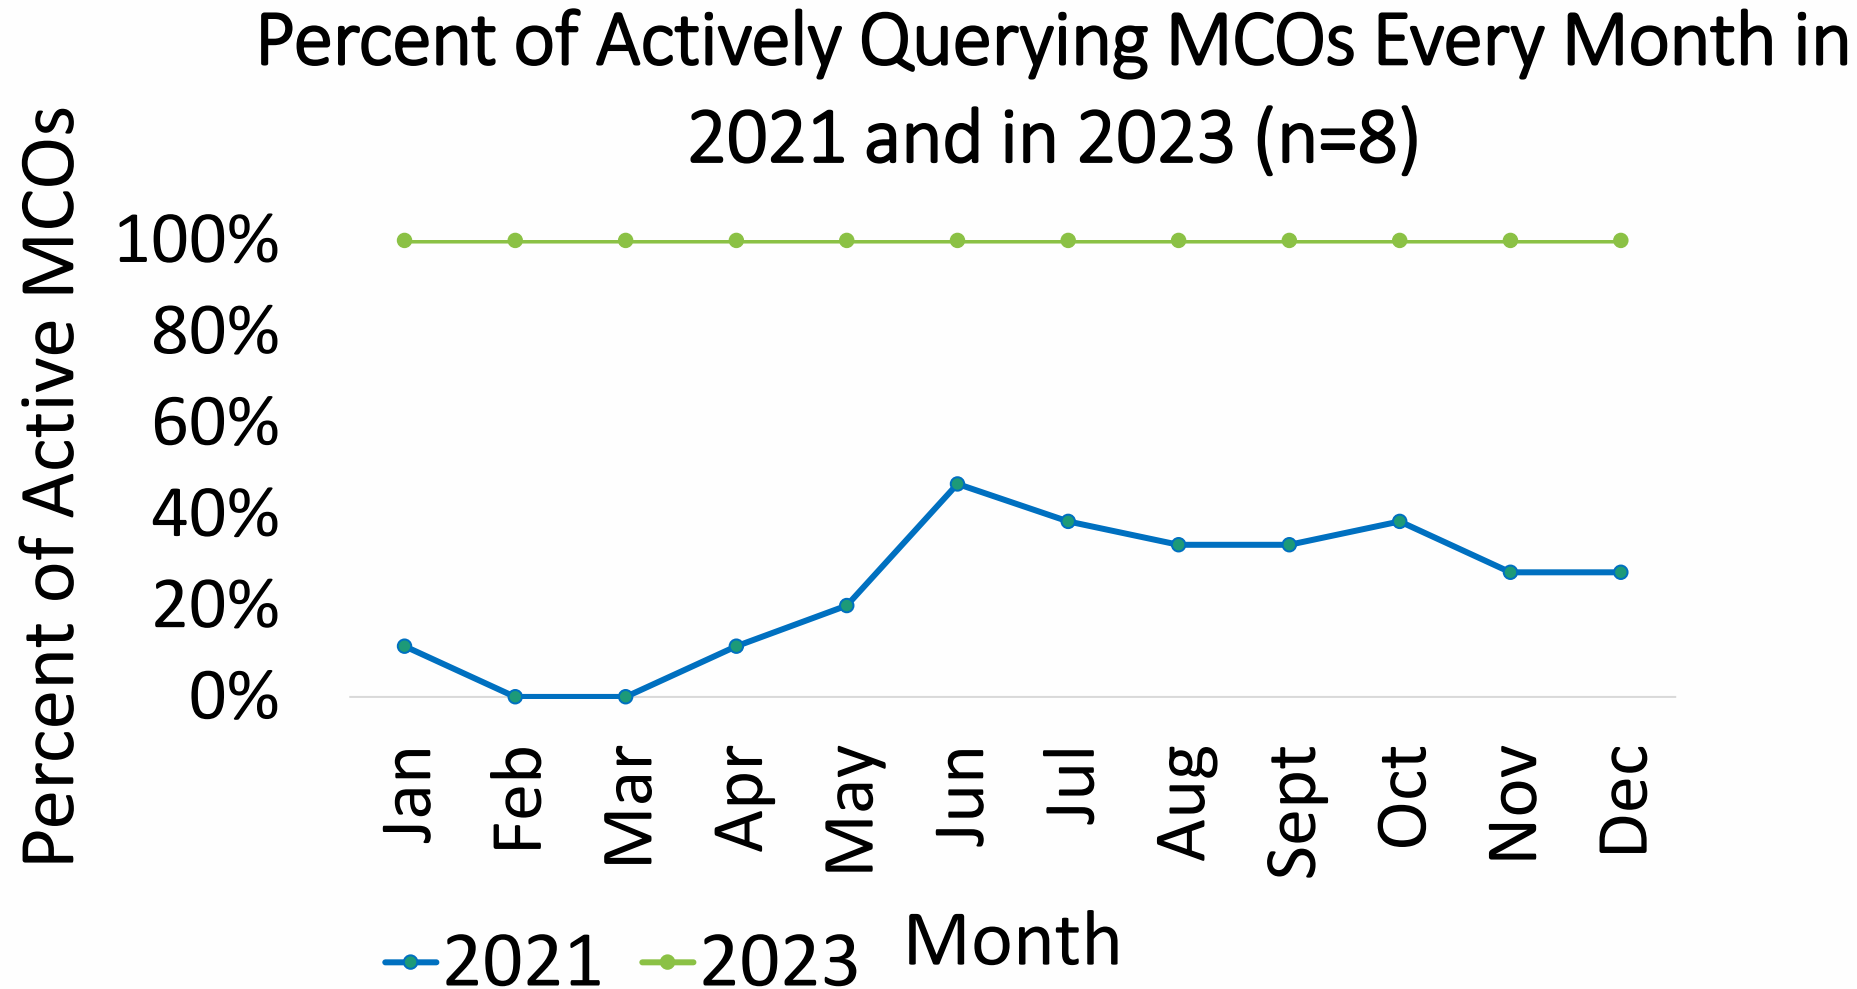

Old DEI Methods limit the way MCOs query (n=8)

Percent of Actively Querying MCOs Every Month in
2021 and in 2023 (n=8)

New HL7 Web Service Method Expands MCO Queries (n=8)

Summary of Results

Summary of Results

- Average MCO query requests have been increasing since 2021
- MCOs (n=8) queried 20 times more using the HL7 Web Service method
- MCOs total and monthly querying volumes changed when they were able to query in real-time
- Using DEI method, MCO queries spiked during months leading up to and during MCO report cards deadlines
- Using the new HL7 method, MCOs were able to query more consistently leading to less spikes in query activity

Conclusions & Future Work

Conclusions

- CIR fills in the immunization data gap for MCOs' immunization coverage information.
- CIR provides immunization data that improves MCOs' overall public report card scores.
- HL7 web service streamlined query processes for MCOs and automated the CIR workflow by removing the manual labor steps in DEI.
- Using HL7 Web Service, MCOs were able to query the CIR more efficiently, frequently, and at higher volumes.

Future Work

- **Upcoming Challenges**
 - Data storage capacities
 - Cloud storage solutions
 - Cyber data security measures
 - Ethical AI integration

Future Work

- **Developing New tools at CIR for better HL7 Web Service**
 - CIR HL7 Activity Dashboard
 - CIR HL7 Onboarding Dashboard
 - CIR HL7 Interop Dashboard

Acknowledgements & Questions

- Acknowledgements to entire CIR team
 - And special thanks to Alexandra Ternier, Bancroft Richards, and Youseline Cherfilus.
- Thank you to the AIRA National 2025 Conference Staff!

Supplementary Slides

MCO Reports Transparency

- The New York State eQARR report is available for free to the public with reports dating back to 2008.
- Only current annual HEDIS score report is available for free, but past reports can cost as much as \$3000.

MCO Reporting Deadlines for 2025 eQARR Report

What to Send for QARR Submission

QARR Submission Required File	<i>Files must be submitted electronically by 9:00 p.m. ET on the date indicated</i>
	MY2025 Data Due Date
IDSS file for all payers – IDSS files must be locked by auditor	June 12, 2026
CAHPS de-identified member-specific file for CPPO, CEPO, CHMO, EP	June 12, 2026
Enrollee Survey de-identified member-specific file for QEPO, QPPO, QHMO, QPOS	June 12, 2026
Patient-Level-Detail file for all products (includes NYS-specific measures)	June 12, 2026
Optional enhancement files for MA, HIVSNP, and HARP	June 12, 2026
Live Birth files for all payers	August 3, 2026

MCO Reporting 2024 Deadlines for HEDIS Scores

- June
- Commercial and Medicaid CAHPS survey results are available for download in IDSS.
- IDSS Plan-lock must be applied for all commercial, Exchange, Medicaid, and Medicare audited submissions **on Friday, May 30 by 9:00 pm ET** to ensure auditors have enough time to validate health plan results.
- Health Plans submit Finalized commercial, Exchange, Medicaid, and Medicare HEDIS (non-survey data) results and signed Attestation via the IDSS on **Friday, June 13 by 9:00 pm ET**.
- CMS requires a Patient-Level-Detail (PLD) file validation for Medicare submissions. Organizations must submit the patientlevel-detail file to CMS' vendor by **Friday, June 13 by 9:00 pm ET**.
- **Last day** for IDSS Resubmission requests for data and Attestation is **Friday, June 27**.
