AMERICAN IMMUNIZATION
REGISTRY ASSOCIATION

Discovery Session: Unlocking the Future: Emerging Standards in Focus

July 28, 2025
4 p.m. ET

Today's Presenters

- **Faisal Reza**, Health Scientist, Centers for Disease Control and Prevention (CDC)
- **Nathan Bunker**, Senior Technical Standards Architect, AIRA

Gathering and Starting FHIR and Other Emerging Standards in Immunization

Faisal Reza

Why gather and start these emerging
standards in immunization?

What are the "whys"?

- **Communicating for action statements:**
The why (So that...),
the how (...we will apply {standard}...),
the what (...to {use case}.)

- **Examples:**
So that my patients are informed about their vaccine administrations, we will apply FHIR, to enable consumer access.

So that my staff can provide the right vaccine to the right member of a population at the right time, we will apply CDSi, to provide staff access to ACIP recommendations.

When are we moving to FHIR? Why move to emerging standards like FHIR?

**Emerging standards are in alignment
with public health data modernization
initiatives**

- FHIR is an emerging standard for securely exchanging human- and machine-readable data from multiple sources, and across systems
- In CDC's Data Modernization Initiative, FHIR offers specifications to structure data and make information available for public health

Source:

<https://www.cdc.gov/surveillance/data-modernization/snapshot/2022-snapshot/stories/interoperability-data-access-exchange.html>

**How can we contribute to
advancing emerging standards in a
coordinated way?**

A seven-stage framework for tracking and tracing emerging standards

Source:

[Emerging Standards for Immunizations - Public Health - Confluence](#)

Example: FHIR for immunization

Using the seven-stage framework for tracking and tracing FHIR for immunization

The federal multi-pronged approach to public health interoperability

The seven-stage framework is in alignment with public health data standards efforts

- HL7 FHIR is a standard adopted for application programming interfaces (APIs) to advance interoperability "without special effort" on the part of the user

Source:
<https://www.cdc.gov/data-interoperability/php/public-health-strategy/index.html>

Emerging standards seven-stage framework in context of the federal multi-pronged interoperability approach

Which stages does this Emerging Standards effort focus on?

Idea

Monitor

Gather

Start

Which stages does this specific session focus on?

Gather

Start

What are the use cases for emerging standards at the gather and start stages?

Gather

- School Interoperability
- HL7 v2 <-> FHIR

Use cases that are actively being tracked, and for which there is a vision for how immunization information systems personnel might leverage this technology

School Interoperability

- **Definition:**
The exchange and use of immunization data between schools and public health databases such as IIS.
- **School Information Systems (SIS)**
- **Connecting SIS and Immunization Information Systems (IIS)**

HL7 v2 <-> FHIR

- **Definition:**
Mapping and translation of HL7 v2 data to FHIR data and vice versa for immunization data exchange.
- **Transitional bridge from HL7 v2 to FHIR (and back)**
- **Fallbacks and contingencies between established and emerging standards for immunization**

Start

- International Vaccine Codes
- Immunization Decision Support + Health, Age, Lifeplans, and Occupation (ImmDS + HALO)

Use cases with high level of interest that could become the core of an independent project

International Vaccine Codes

- **Definition:**
Interoperable exchange of codes for international vaccines as well as vaccine codes that are internationally adopted
- **There are many different coding systems**
- **Limited coordination for mapping or understanding**

Immunization Decision Support + Health, Age, Lifeplans, and Occupation (ImmDS + HALO)

- **Definition:**
ImmDS = Immunization Decision Support
+
HALO = Health (existing conditions)
Age (pediatric / adult)
Lifeplans (travel / hobbies)
Occupation (healthcare /emergency responder)
- **Clinical Decision Support for immunization (CDSi) supports**
- **Clinical Decision Support (CDS) engines support**

Continue the conversation

Dive into the discussion

- **On the Confluence Site**

<https://confluence.hl7.org/spaces/PHWG/pages/131046313/Emerging+Standards+for+Immunizations>

The screenshot shows a Confluence page titled 'Emerging Standards for Immunizations'. The page is part of the 'Immunization Focus Group' under the 'Public Health Project Roadmap'. The page content discusses the use of FHIR and other emerging standards to support immunization interoperability and modernization of immunization information systems (IIS). It defines three categories: Emerging Topics and Standards, Emerged Standards, and Parked. The page was created by Nathan Bunker on March 18, 2025, and has a 10-minute read time.

- **At the Immunization Focus Group Meetings**

Share your thoughts with us

Email “IISInfo@cdc.gov” with
Subject “Immunization Emerging Standards”
and with responses to:

- *Where are you joining the conversation from (location, affiliation)?*
- *What is your ‘why’ for navigating immunization emerging standards?*
- *How does the 7-stage framework relate to the standards you are using or are planning to use?*
- *What Use Cases would you like the field to consider in the Gather stage? In the Start stage?*
