

Discovery Session: Real-Time Readiness! Transforming IIS Inventory with VTrckS Data Automation

January 26, 2026
4:00 p.m. ET

AIRA Discovery Session

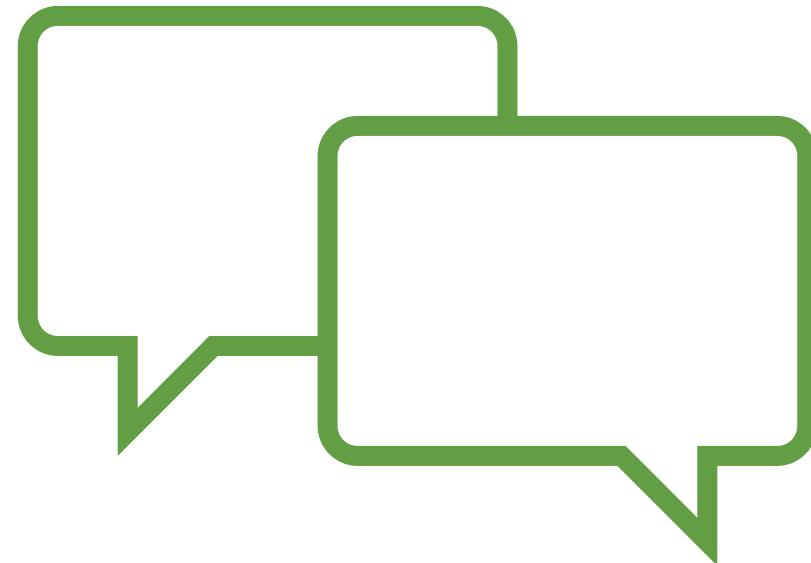

All phone lines
are muted

This meeting is being recorded
and will be posted in the
AIRA repository

Technical Support

If you experience any technical issues during the meeting, please contact **Skylar Adkins** via direct message in the Chat.

Questions

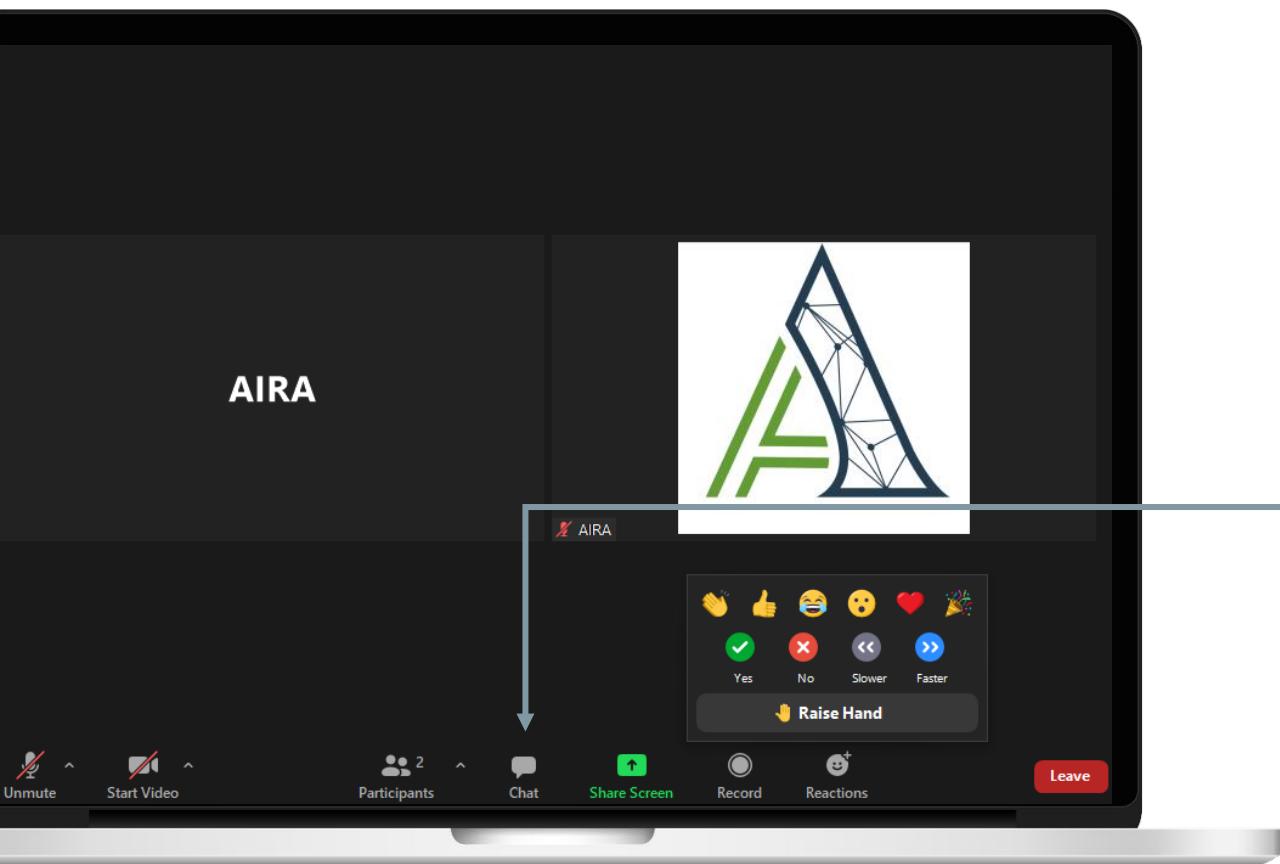

How do I ask a question?

There will be time allotted for Q&A following the presentations.

If you think of a question during the presentations:

Select the chat icon and type your question into the chat box.

Today's Presenters

- **Kimberly White**, Health Program Associate, Connecticut
- **Georgia Elysee**, Vaccines for Children (VFC) Program Unit Chief, Bureau of Immunizations, New York City

AIRA Discovery Session:
**Real-Time Readiness!
Transforming IIS Inventory
with VTrckS Data
Automation Confirmation**

Presented by: Kimberly White
Connecticut Department of Public Health

Disclosure Statement

The authors of this presentation declare that they have no relevant or material financial interests that relate to the research described in this presentation.

Background

The Vaccine Tracking System (VTrckS) is a Centers for Disease Control and Prevention (CDC) application that jurisdictions are required to use for vaccine management - orders, transfers, wastage, inventory on hand and shipment information are all reported by jurisdictions to VTrckS.

Since jurisdictions use their Immunization Information System (IIS) for inventory management, the External Information System (EXIS) is used to exchange information between VTrckS and IIS. This is a manual process that:

- Must be performed multiple times a day to keep both systems in sync.
- Leaves room for error
- Is reliant on staff scheduled to work to conduct the downloads
- Time consuming
- Information could be potentially delayed

Connecticut's Immunization Landscape

- Connecticut is a universal state
- Our IIS CT WiZ- an Envision product
- In 2025 Connecticut had:
 - 638 enrolled VFC providers
 - 10,562 orders placed by providers
 - Shipped 1,389,552 doses of VFC vaccine

Application Programming Interface (API)

In 2023, CDC announced an opportunity for jurisdictions to apply for the Application Programming Interface (API) grant.

This API is a system-to-system interface between the jurisdiction's IIS and VTrckS.

The API would have the following benefits for the jurisdiction's:

- Real time information for providers
- Automation of processes
- Less strain on jurisdiction staff

Connecticut was awarded this grant and kicked off the project in September 2023

API Implementation Phases

Phase 1

Grant-funded

Inbound

- Shipment data

Completed 2024

Phase 2

Grant-funded

Inbound

- Vaccine list: federal, non-federal and pandemic
- County codes

Completed 2024

Phase 3

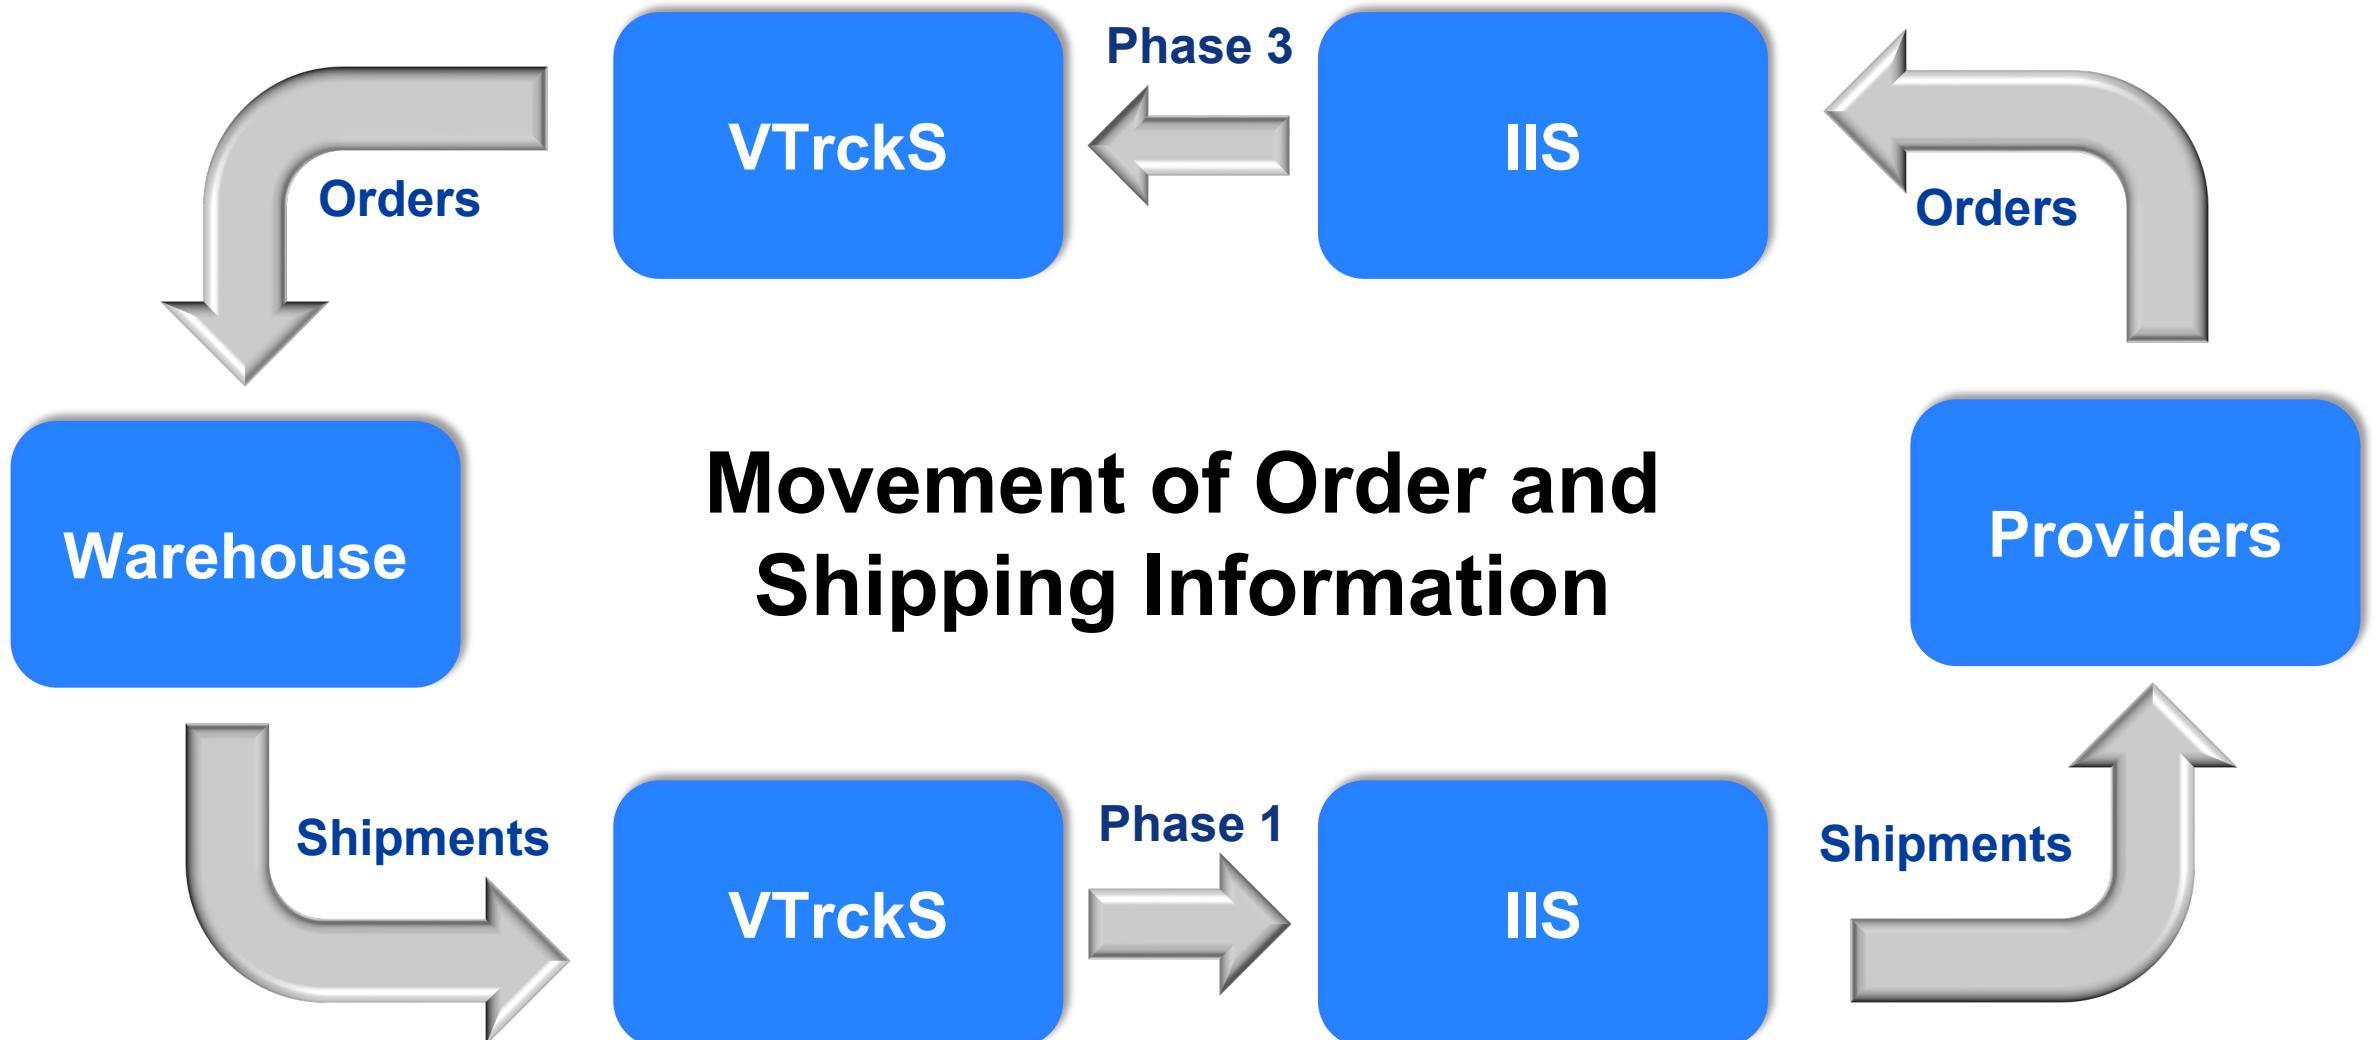

Will be funded through Direct Vendor Contract

Outbound

- Provider master data, inventory on hand, orders, returns and wastage

Currently in Development

EXIS Process

Implementation Process

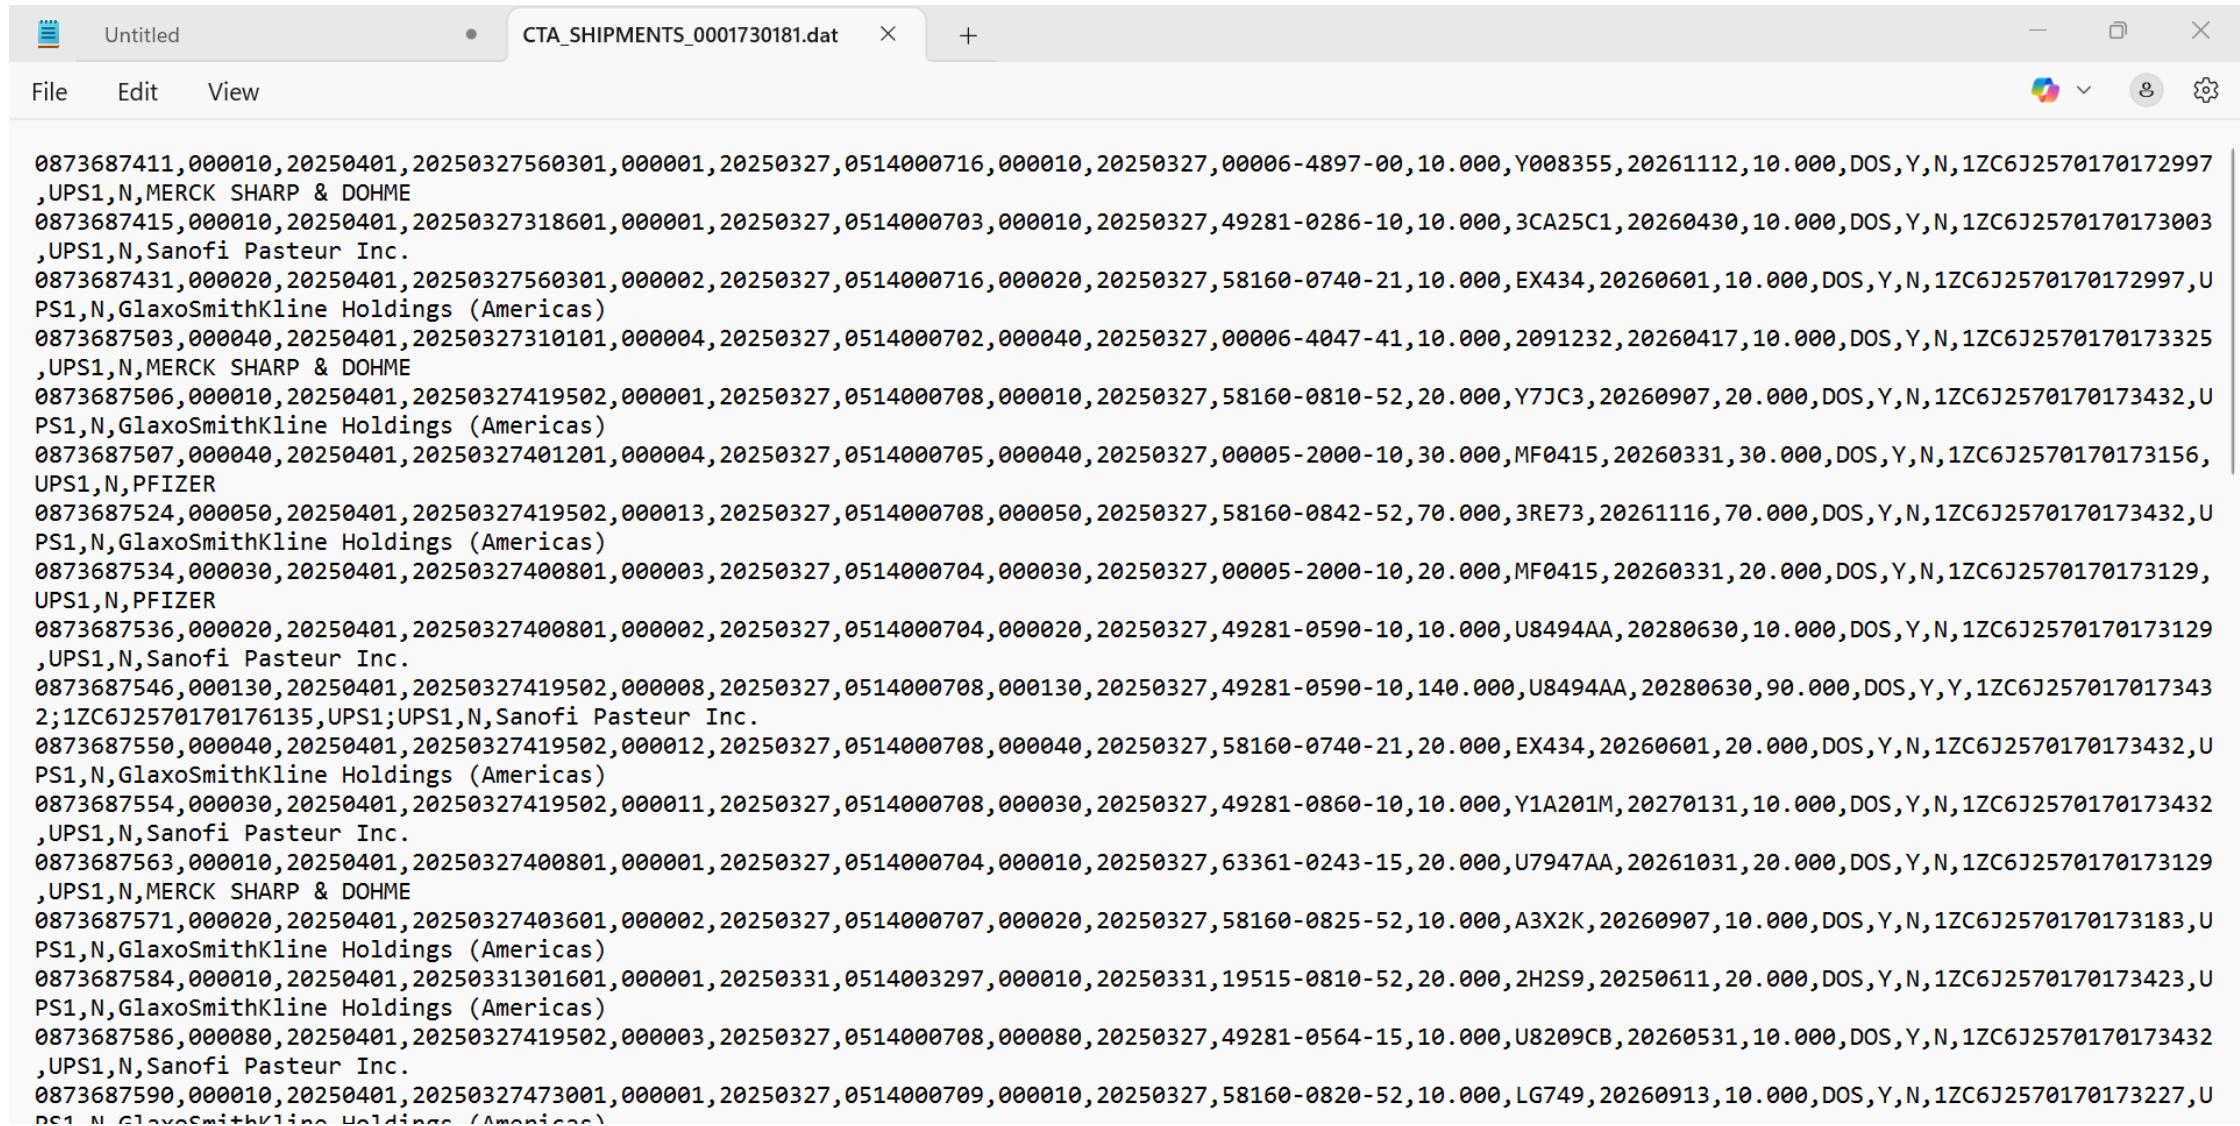

Calls with our jurisdiction, CDC and our IIS vendor

A workplan was created with CDC with target dates to complete different steps of the implementation process

Separate from the CDC calls, Connecticut met weekly with our IIS vendor to discuss features and design of the API

IIS vendor staff was awarded specific access to SAMS to build and test the interface

EXIS Shipment Data

Results

Phase 1 (Shipment Data):

- Downloads occur daily at 7:30 A.M. and 12:30 P.M. Monday-Friday.
- Option for ad hoc downloads.
- Staff can see all downloads that occurred, with number of records and errors.

Conclusions

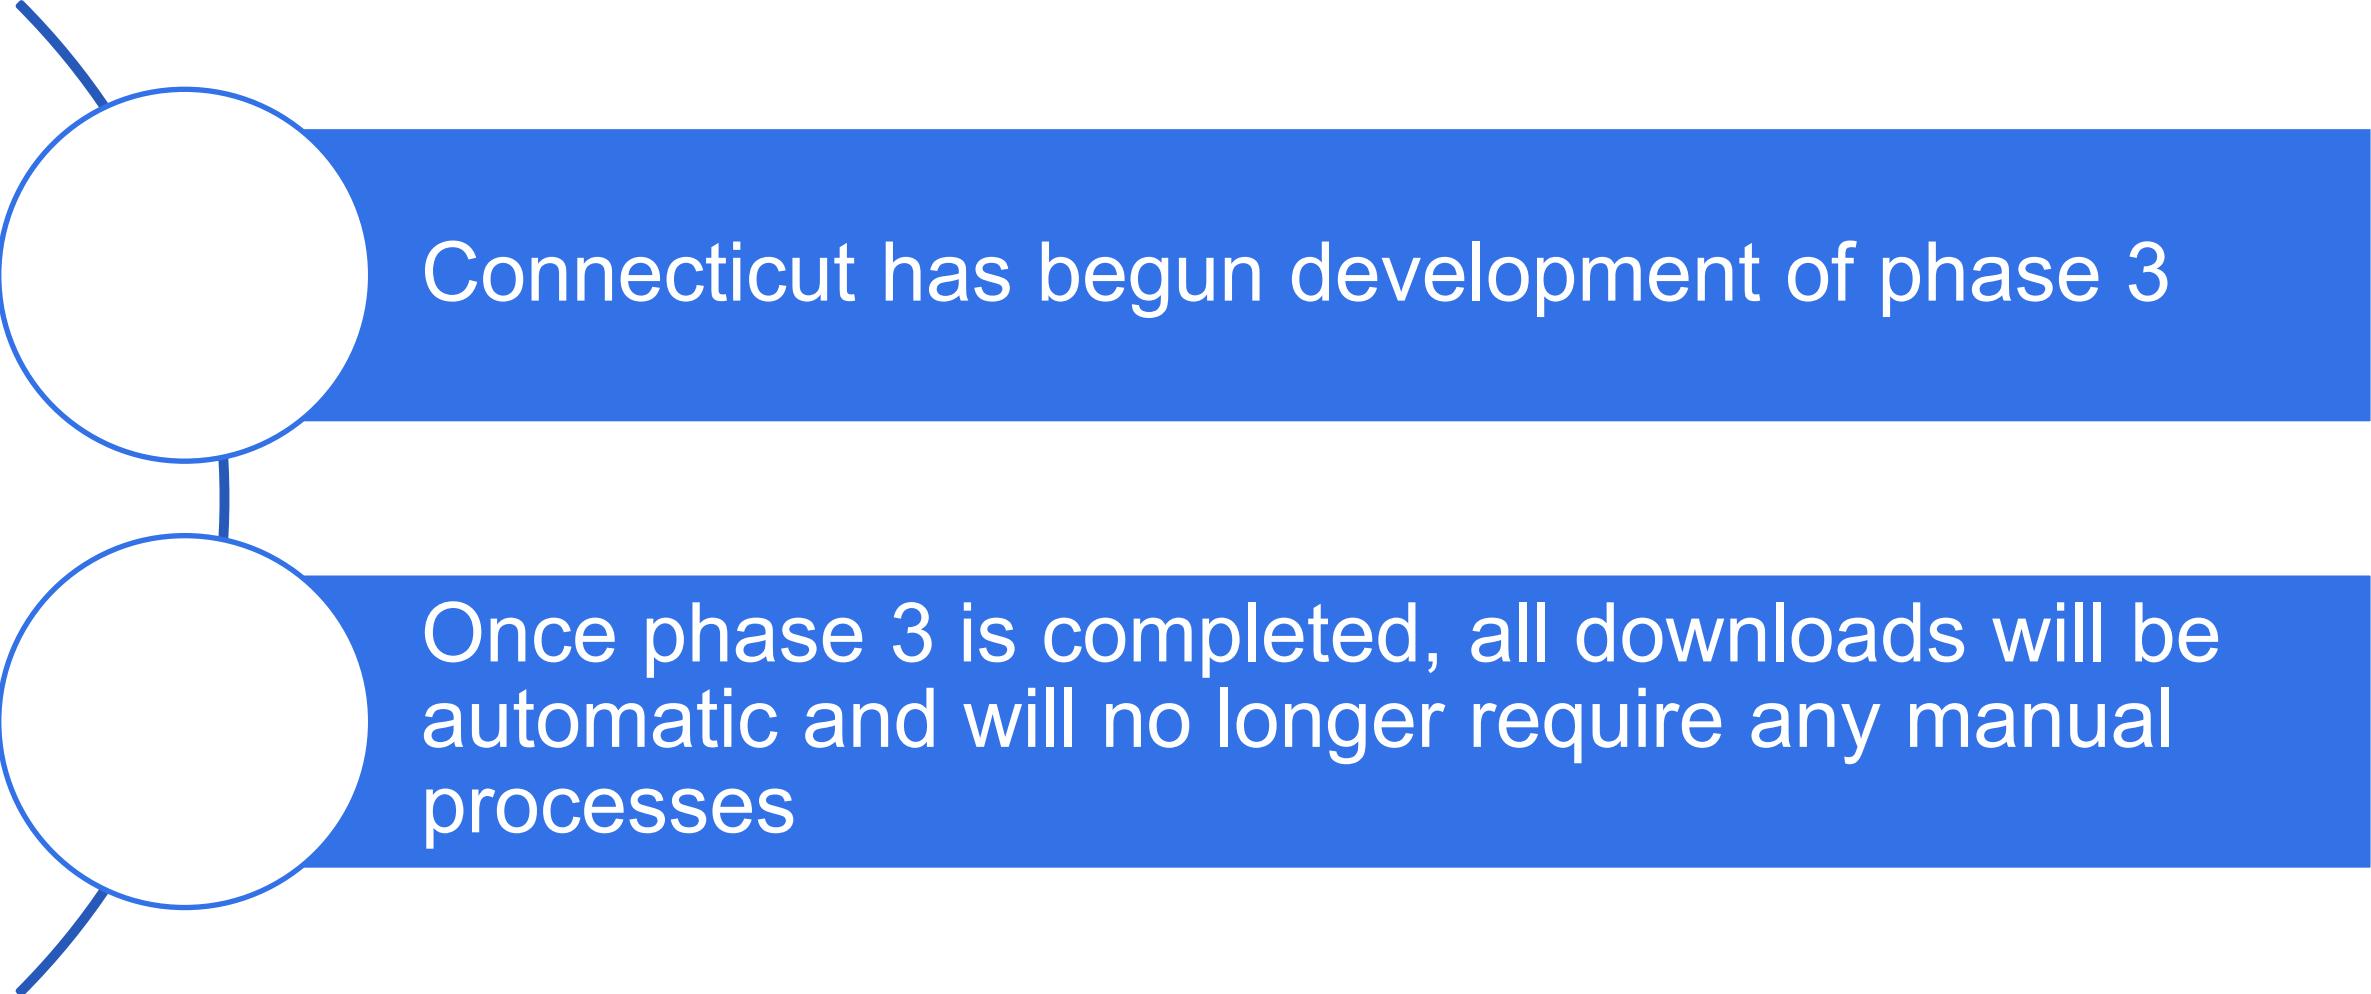

Providers received shipment information consistently

No delays due to staff schedule, holidays, snow days, etc.

Staff have more time to work on other tasks

Results of downloads are easily accessible to CTDPH staff

Next Steps

Connecticut has begun development of phase 3

Once phase 3 is completed, all downloads will be automatic and will no longer require any manual processes

Integrating CDC's Vaccine Tracking System (VTrckS) Application Programming Interface (API) with NYC's Vaccine Inventory Management Application

Georgia Elysee, MPH, Vaccines for Children Program Unit Chief

NYC Department of Health and Mental Hygiene

January 26, 2026 - AIRA Discovery Session

Real-Time Readiness! Transforming IIS Inventory with VTrckS Data Automation

Outline

- Background
- Objectives
- Methods
- Results
- Conclusion
 - Key Outcomes and Benefits
 - Next Steps

Background

Citywide Immunization Registry (CIR) Overview

- The Immunization Information System (IIS) for New York City (NYC)
 - Began citywide in 1997
 - Contains >15 million patient records and >180 million immunizations
 - The Online Registry is the CIR's user interface for providers
 - Reporting of immunizations for children 0-18 years is mandatory
 - Reporting for adults 19 years and older requires consent

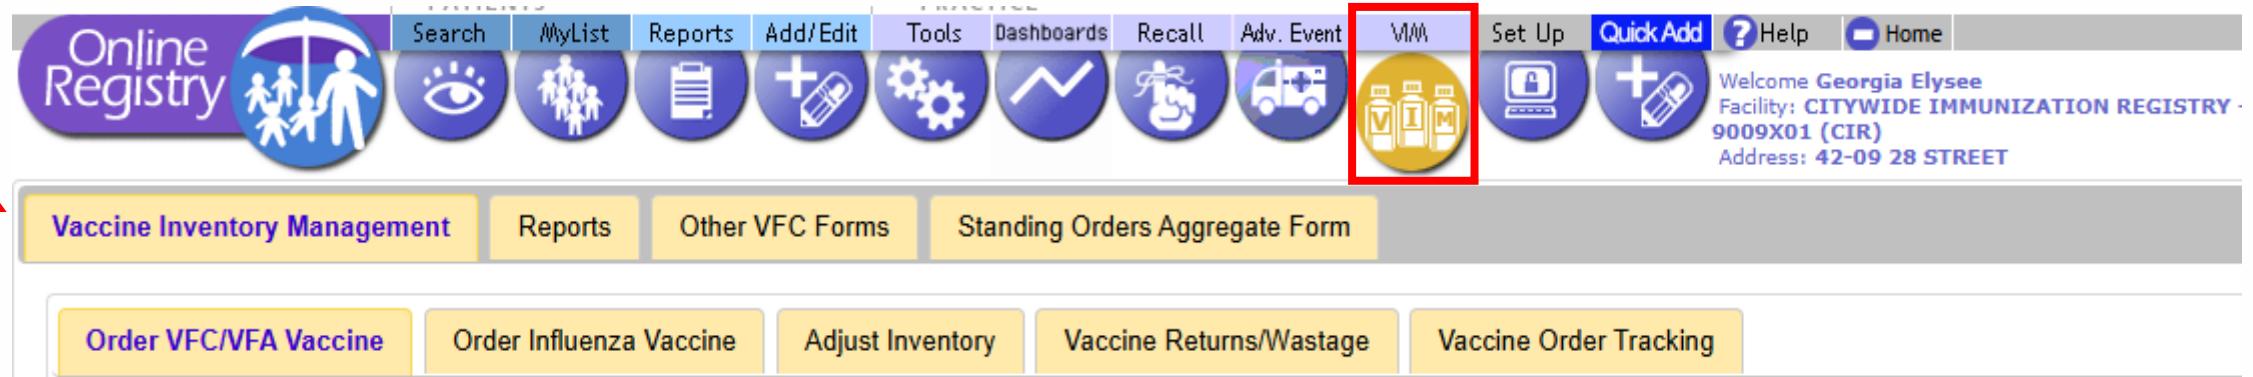

Partnership with HLN Consulting

- HLN has provided software development and support services to the CIR continuously since the year 2000
- CIR owns the copyright for its source code
 - CIR has shared some of its open-source components

NYC's Vaccination Programs

- Vaccines for Children (VFC) Program
 - ~1,200 provider sites enrolled
 - NYC distributes ~3 million doses of vaccines annually
- Vaccines for Adult (VFA) Program/COVID-19 Bridge Access
 - Ended in August 2024
 - 145 provider sites enrolled
 - Distributed >21,000 COVID-19 doses
- Mpox Program
 - Ended August 2024
 - 129 provider sites enrolled
 - Distributed >10,000 Jynneos doses

Vaccine Inventory Management (VIM) Module

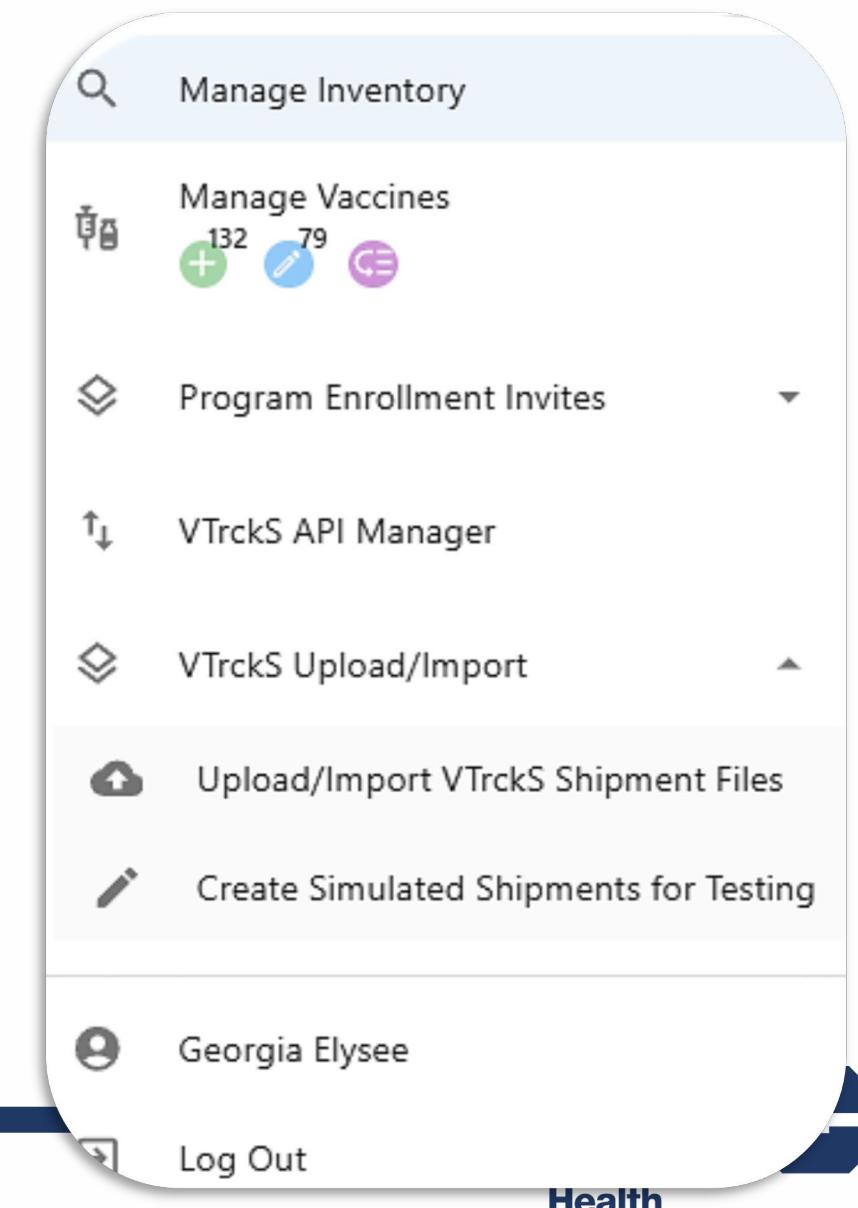

The screenshot shows the CIR Online Registry interface. At the top, there is a navigation bar with various icons and links: Online Registry, Search, MyList, Reports, Add/Edit, Tools, Dashboards, Recall, Adv. Event, VIM (which is highlighted with a red box), Set Up, Quick Add, Help, and Home. To the right of the navigation bar, there is a welcome message: "Welcome Georgia Elysee Facility: CITYWIDE IMMUNIZATION REGISTRY - 9009X01 (CIR) Address: 42-09 28 STREET". Below the navigation bar, there is a main menu with several buttons: Vaccine Inventory Management (highlighted with a red box and a red arrow pointing to it), Reports, Other VFC Forms, Standing Orders Aggregate Form, Order VFC/VFA Vaccine, Order Influenza Vaccine, Adjust Inventory, Vaccine Returns/Wastage, and Vaccine Order Tracking.

- In 2013, NYC launched the public facing VIM module for VFC providers in the CIR Online Registry user interface
 - Vaccine ordering
 - Ordering recommendations based on reporting, inventory, seasonality and a 5-week safety stock
 - Automatic inventory decrementing upon vaccine administration
 - Vaccine wastage/expiry reporting
 - Order status tracking
 - Ordering and inventory reports

Internal Vaccine Inventory Management Application (VIM App)

- Developed at the start of the COVID-19 vaccination campaign
- Utilized by immunization staff to document and track vaccine transfers between facilities
- Provided access to real-time updates of vaccine inventory
- Addressed challenges of vaccine distribution including urgent vaccine needs, changing vaccine availability, and supply limitations

Federal Vaccine Roll-out History

2020

- New COVID-19 Vaccine Products
- Controlled Vaccine Ordering and Distribution by CDC

2021-2023

- Additional COVID-19 Vaccine Products
- MPOX Outbreak - Jynneos Vaccine
- RSV Immunization Products on CDC Allocation
- COVID-19 Vaccine Commercialization

2024

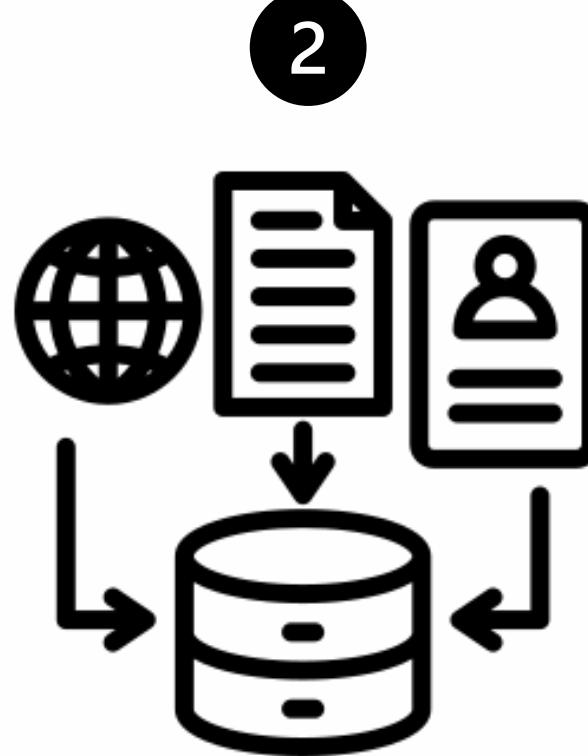

- Jynneos Vaccine Commercialization
- RSV Immunization Products on CDC Allocation

Rapid federal vaccine roll-out led to an inefficient and unmanageable manual vaccine update process in VIM.

1

2

3

Vaccine Management Automation

- The pandemic, the federal vaccine roll-out, and ordering controls on vaccine products highlighted the need for automated processes and the elimination of:
 - Manual updates of available vaccine product details (e.g., NDC, CVX, brand, manufacturer, cost)
 - Heavily dependent on CIR vendor availability
 - Pivot to focus on CIR vaccine updates
 - Time sensitive updates

Program Objectives

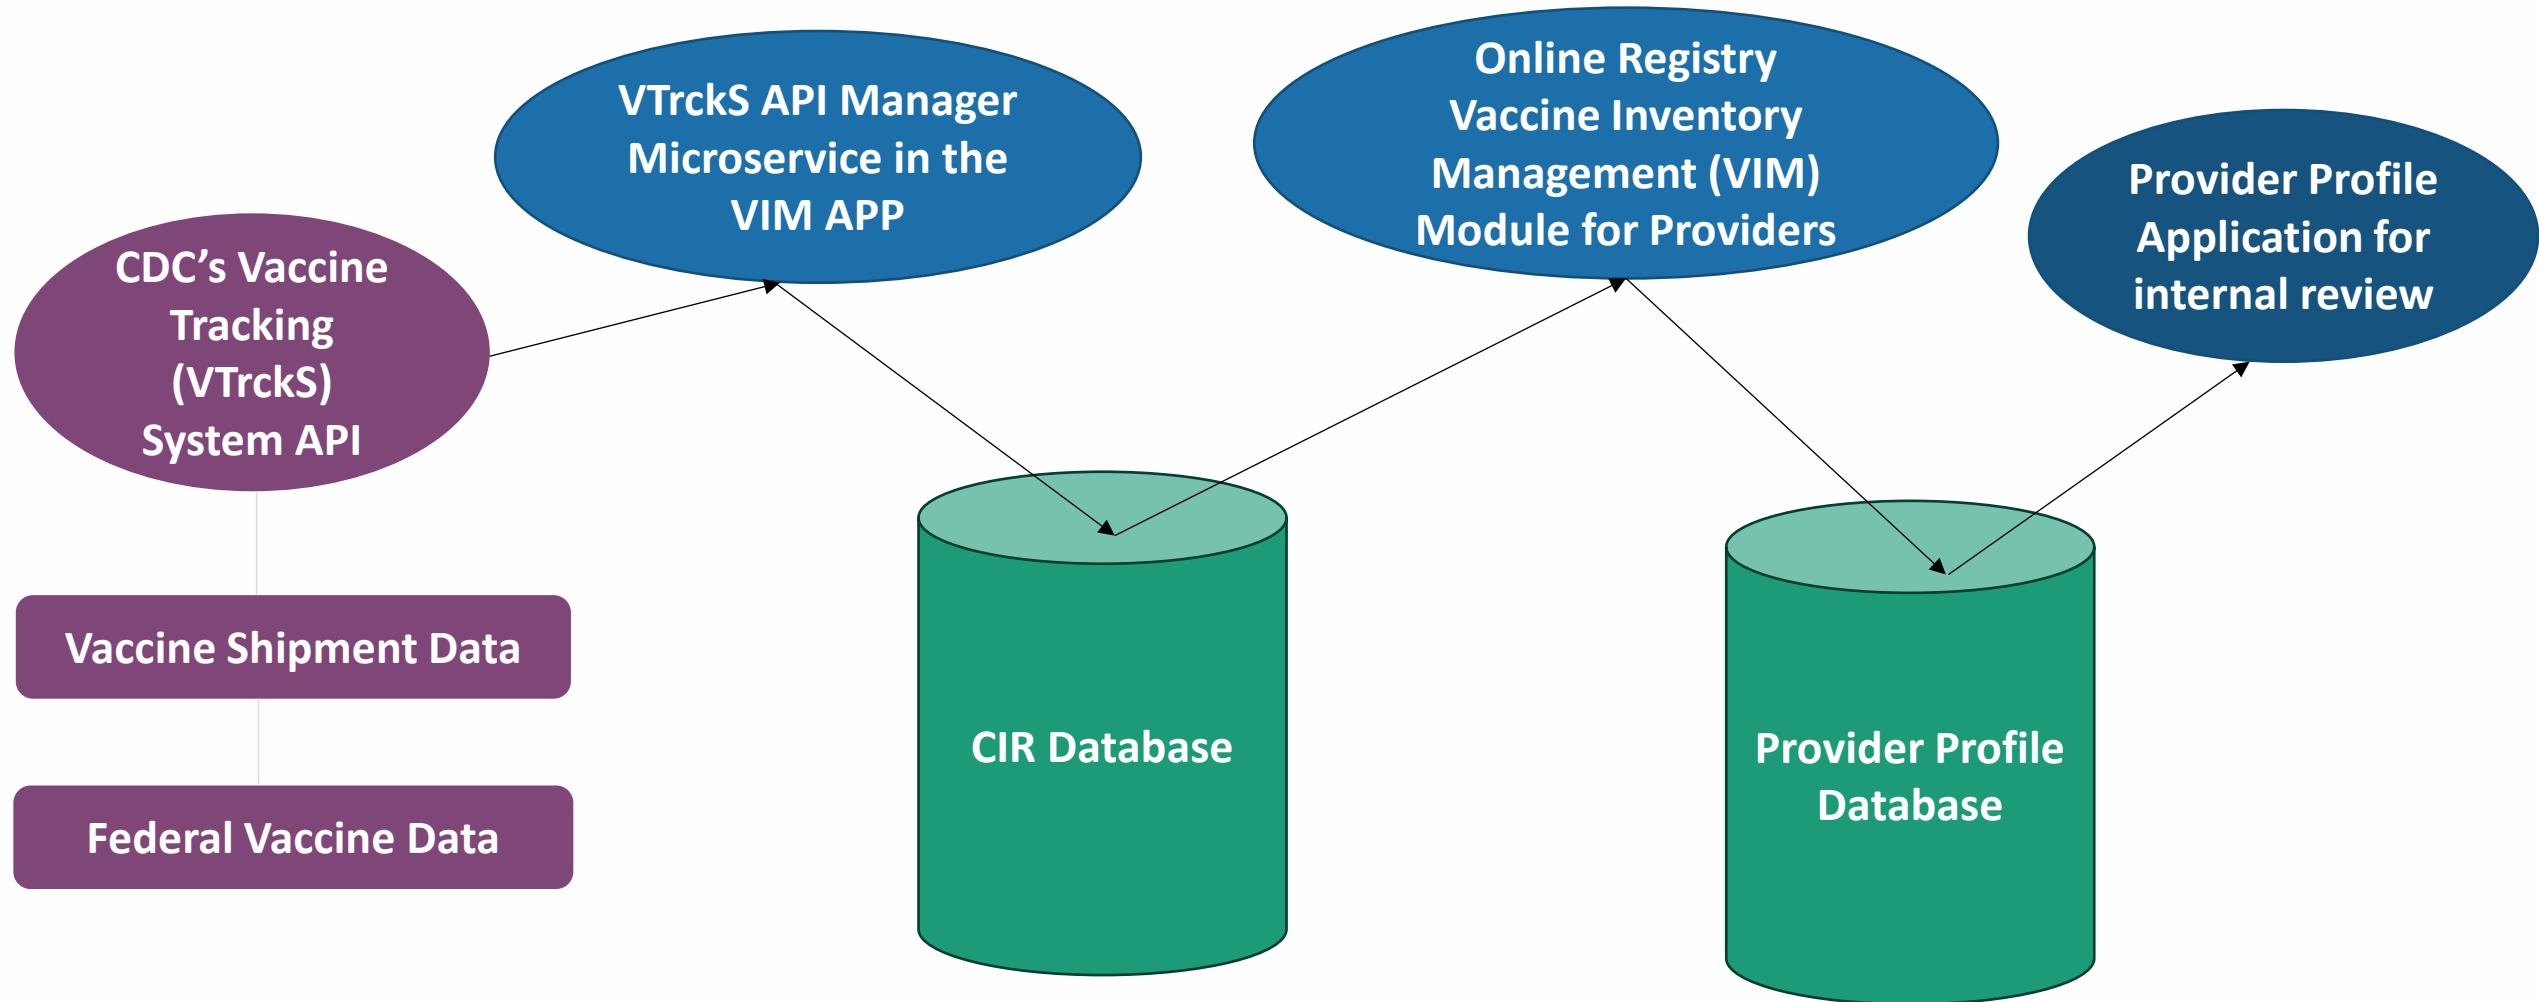

- Increase overall efficiency of vaccine management
 - Responsiveness, timeliness and availability of vaccine products for providers
- Decrease dependency on CIR staff and vendor
- Modernize and enhance the CIR
- Improve NYC's preparedness for emergency public health events involving vaccine preventable diseases

Methods

CDC's VTrckS API Grant

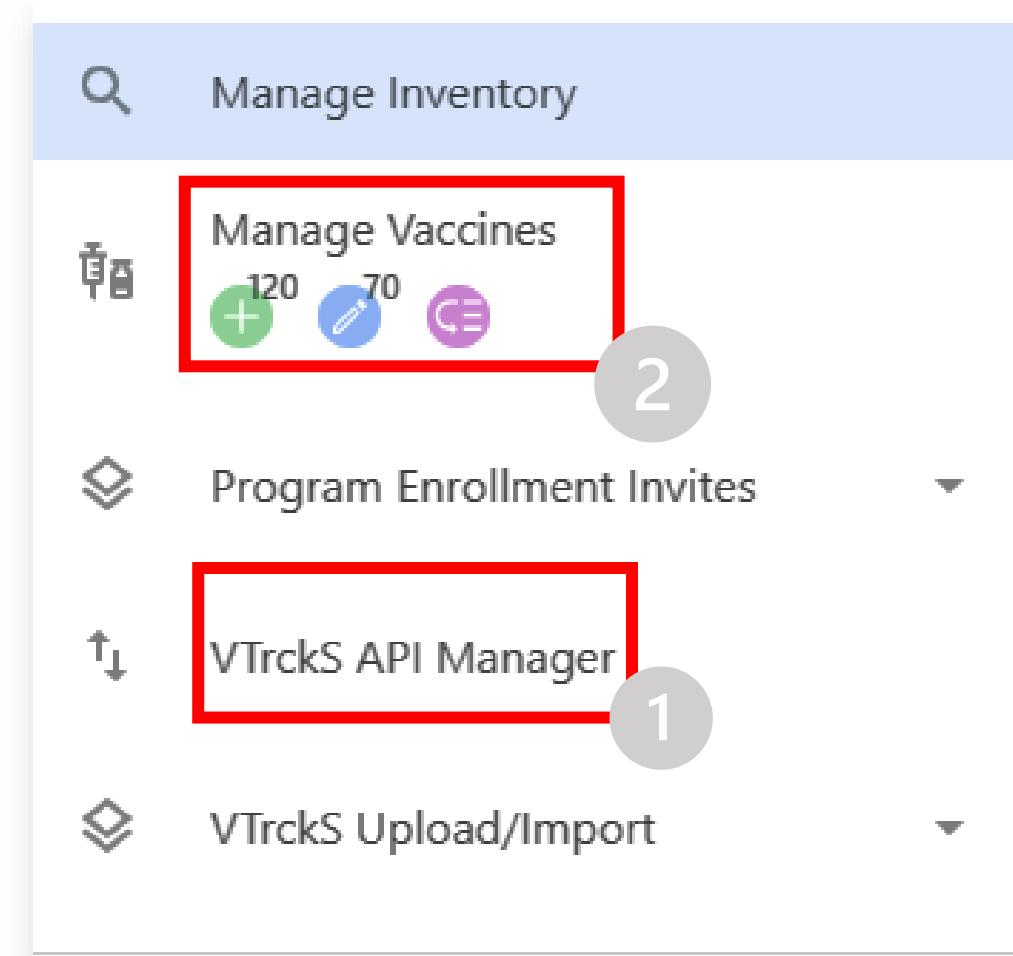

- Applied and received the Vaccine Tracking System (*VTrckS Automation using an Application Programming Interface (API) Supplemental Grant: Phases 1 and 2*) developed by CDC in July 2023
 - Phase 1 - Inbound vaccine shipment data
 - Phase 2 - Master data such as the Federal, Pandemic, Non-Federal vaccines and county codes lists
- Required an internal dashboard to manage, access, audit and handle errors

VTrckS API Integration Overview

VIM App Enhancements

- VTrckS API Manager
 - Dashboard launched March 2024
 - Activity Log menu
 - On-demand request capability
- Manage Vaccines
 - User interface launched in September 2024
 - Allows product updates and ordering control

VTrckS API Manager Dashboard

Results

Increase Timeliness and Availability of Vaccine Updates

Increase Efficiency of Vaccine Management

Conclusion

Key Outcomes and Benefits

- Data integration allows us to
 - Automate the collection of vaccine product details
 - Improve consistency across CIR systems, reduce errors and standardize workflows
 - Improve timeliness and availability of vaccine products
- Identify areas for further optimization to improve efficiency
- Accurate and up-to-date data is crucial for efficient vaccine management

Next Steps

- Leverage the data obtained through the VTrckS API integration
- Continue to automate and modernize the CIR
- Enhance the VIM App through CDC's VTrckS API grant phase 3 to automatically submit data to CDC
 - Provider Master Data – Completed
 - Inventory Data – Completed
 - Provider Order Data – Completed
 - Vaccine Returns/ Wastage – Completed
